

iPhone App for ResMed Air10 CPAP Users Now Available in the U.S.

“myAir™ for Air10™ by ResMed” app gives CPAP users easier access to their daily myAir Score and coaching tips on their iPhone®

84% of myAir users achieve CPAP compliance¹

San Diego, August 18, 2016 – myAir, ResMed’s program for CPAP users to track their own sleep apnea treatment, is now available in the U.S. as an iOS app in the Apple App Store®.

Roughly 900 patients a day sign up for the web application version of ResMed’s myAir that gives users a “myAir score” every morning – showing how long they slept on CPAP, how many apneas they had per hour and how well their CPAP mask fit. The app also provides personalized tips for greater comfort and sleep, and badges when users reach milestones in their therapy.

“myAir helps my patients be more engaged with their therapy and achieve better health outcomes,” said Jennifer Wilkymacky-Wormald, clinical and marketing manager for the Cincinnati-area ATI CPAP Solutions. “Plus, it helps our office run more efficiently. The more patients who achieve CPAP compliance, the more time we have to focus on patients who still need extra support.”

Eighty-four percent of myAir users are compliant on CPAP within 90 days;¹ on average, 50 percent of CPAP users are compliant.² Compliant CPAP use is key for patients to effectively treat their sleep apnea – and for their equipment providers to receive reimbursement from Medicare and other insurers.

“We have seen increased rates of patient engagement and satisfaction by integrating myAir into their treatment plans,” said Raj Sodhi, ResMed president of Healthcare Informatics. “Now it’s even easier for patients to engage with their therapy thanks to the added convenience of an iPhone app.”

The myAir app is available now in the Apple App Store for ResMed Air10 users in the U.S. Android users can still use ResMed’s myAir web application; visit ResMed.com/myair to sign up.

About ResMed

ResMed (NYSE:RMD) changes lives with award-winning medical devices and cutting-edge cloud-based software applications that better diagnose, treat and manage sleep apnea, chronic obstructive pulmonary disease (COPD) and other chronic diseases.
