Financial Analysts
Briefing Supplement - Revised*
Fourth Quarter 2017

This document is a statistical supplement to the Financial Analysts Briefing book. Throughout the presentation, amounts presented may not foot due to rounding. As you review the supplement, please note:

The following discussion includes references to Aflac's non-U.S. GAAP performance measures, operating earnings, operating earnings per diluted share, amortized hedge costs, and adjusted book value. These measures are not calculated in accordance with U.S. GAAP. The measures exclude items that the company believes may obscure the underlying fundamentals and trends in insurance operations because they tend to be driven by general economic conditions and events or related to infrequent activities not directly associated with insurance operations. Management uses operating earnings and operating earnings per diluted share to evaluate the financial performance of Aflac's insurance operations on a consolidated basis and believes that a presentation of these measures is vitally important to an understanding of the underlying profitability drivers and trends of Aflac's insurance business. The company believes that amortized hedge costs, which are a component of operating earnings, measure the periodic currency risk management costs associated with hedging a portion of Aflac Japan's U.S. dollar-denominated investments and are an important component of net investment income. The Company considers adjusted book value important as it excludes accumulated other comprehensive income (AOCI), which fluctuates due to market movements that are outside management's control.

Aflac defines these non-U.S.GAAP financial measures as follows:

- Operating earnings includes interest cash flows associated with notes payable and amortized hedge costs related to foreign currency denominated investments, but excludes certain items that cannot be predicted or that are outside of management's control, such as realized investment gains and losses from securities transactions, impairments, change in loan loss reserves and certain derivative and foreign currency activities; nonrecurring items; and other non-operating income (loss) from net earnings. Nonrecurring and other non-operating items consist of infrequent events and activity not associated with the normal course of the Company's insurance operations and do not reflect Aflac's underlying business performance. A reconciliation of net earnings to operating earnings is on page 2.
- Operating earnings per share (basic or diluted) are the operating earnings for the period divided by the weighted average outstanding shares (basic or diluted) for the period presented.
- Amortized hedge costs represent costs incurred in using foreign currency forward contracts to hedge the foreign exchange risk of a portion of U.S. dollar-denominated assets in the company's Japan segment investment portfolio. These amortized hedge costs are derived from the difference between the foreign currency spot rate at time of trade inception and the contractual foreign currency forward rate, recognized on a straight line basis over the term of the hedge. There is no comparable U.S. GAAP financial measure for amortized hedge costs.
- Adjusted book value is the U.S. GAAP book value, less Accumulated Other Comprehensive Income ("AOCI" as recorded on the U.S. GAAP balance sheet).

Because a significant portion of the company's business is conducted in Japan and foreign exchange rates are outside of management's control, Aflac believes it is important to understand the impact of translating Japanese yen into U.S. dollars. Operating earnings per diluted share "excluding foreign currency impact" are computed using the average yen/dollar exchange rate for the comparable prior year period, which eliminates dollar based fluctuations driven solely from currency rate changes.

On January 1, 2016, the Company retrospectively adopted revised accounting guidance for Accounting for Costs Associated with Debt Issuance, which resulted in an immaterial decrease to other assets and notes payable.

On January 1, 2016, the Company revised its definition of purchases to include the reinvestment of proceeds related to unplanned sale activity. New purchases include all purchases related to fixed maturities and perpetuals, loan receivables, and equities. Securities lending/repurchase agreement activity and capital contributions to alternatives are excluded. The definition of new money yield has also been revised to reflect this change. Yields for equities are based on assumed dividend yield at time of purchase. Historical amounts have been revised to reflect the new definitions.

Effective January 1, 2017, operating earnings includes the impact of amortized hedge costs incurred in using foreign currency forward contracts to hedge a portion of the foreign currency exchange risk on the U.S. dollar-denominated assets in Aflac Japan's investment portfolio. Prior period operating earnings have been revised to conform to this change.

On January 1, 2017, the Company adopted a policy to classify all foreign currency gains (losses) as components of the Certain derivatives and foreign currency gains (losses) line item of the income statement, which is a component of Realized investment gains (losses). Amounts have been reclassified from Other income and Securities transactions and impairments for all prior periods to be consistent with the current period.

* Certain numbers herein have been changed to reflect the refinement of the estimated impact of Tax Reform as reflected in the Company's Form 10-K.

[1] See definition of operating earnings on cover page. All prior period operating earnings have been adjusted for the reclassification of amortized hedge costs for consistency with current period presentation.

[2] Foreign currency gains (losses) for all periods have been reclassified from Other and non-recurring income (loss) to Certain derivatives and foreign currency gains (losses).

[3] This estimated impact of Tax Reform may be adjusted in future periods, possibly materially, due to, among other things, further refinement of the company's calculations, changes in interpretations and assumptions the company has made, tax guidance that may be issued and actions the company may take as a result of Tax Reform. This is a non-recurring item that is separately identified because as a tax item there is no additional "net of tax" effect.

[1] The debt amount is the sum of the gross notes payable and has been adjusted for 50% of our subordinated debentures. The debt was also adjusted between 2nd quarter of 2013 and 2nd quarter of 2014 for the portion of senior notes designated as pre-funding of 2014 maturities.

[2] Adjusted capitalization is the sum of the adjusted debt plus shareholders' equity, excluding the unrealized gains and losses on investment securities and derivatives

[3] Revised adjusted capitalization is the sum of debt, excluding pre-funding amounts, plus shareholders' equity excluding AOCI

[4] Debt maturity amounts do not include discounts, premiums, deferred charges, or capital lease obligations.
