Financial Analysts Briefing Supplement
Second Quarter 2019

This document is a statistical supplement to the Financial Analysts Briefing book. Throughout the presentation, amounts presented may not foot due to rounding. As you review the supplement, please note:

The following discussion includes references to Aflac's non-U.S. GAAP performance measures, adjusted earnings, adjusted earnings per diluted share, amortized hedge costs/income, and adjusted book value. These measures are not calculated in accordance with U.S. GAAP. The measures exclude items that the company believes may obscure the underlying fundamentals and trends in insurance operations because they tend to be driven by general economic conditions and events or related to infrequent activities not directly associated with insurance operations. Management uses adjusted earnings and adjusted earnings per diluted share to evaluate the financial performance of Aflac's insurance operations on a consolidated basis and believes that a presentation of these measures is vitally important to an understanding of the underlying profitability drivers and trends of Aflac's insurance business. The company believes that amortized hedge costs/income, which are a component of adjusted earnings, measure the periodic currency risk management costs/income related to hedging certain foreign currency exchange risks and are an important component of net investment income. The company considers adjusted book value important as it excludes accumulated other comprehensive income (AOCI), which fluctuates due to market movements that are outside management's control.

The company defines these non-U.S.GAAP financial measures as follows:

• Adjusted earnings are adjusted revenues less benefits and adjusted expenses. The adjustments to both revenues and expenses account for certain items that cannot be predicted or that are outside management's control. Adjusted revenues are U.S. GAAP total revenues excluding realized investment gains and losses, except for amortized hedge costs/income related to foreign currency exposure management strategies and net interest cash flows from derivatives associated with certain investment strategies. Adjusted expenses are U.S. GAAP total acquisition and operating expenses including the impact of interest cash flows from derivatives associated with notes payable but excluding any nonrecurring or other items not associated with the normal course of the company's insurance operations and that do not reflect the company's underlying business performance. The most comparable U.S. GAAP measure is net earnings. A reconciliation of net earnings to adjusted earnings is on page 2.
• Adjusted earnings per share (basic or diluted) are the adjusted earnings for the period divided by the weighted average outstanding shares (basic or diluted) for the period presented. The most comparable U.S. GAAP measure is net earnings per share.
• Amortized hedge costs/income represent costs/income incurred or recognized in using foreign currency forward contracts to hedge certain foreign exchange risks in the company's Japan segment (costs) or in the Corporate and Other segment (income). These amortized hedge costs/income are derived from the difference between the foreign currency spot rate at time of trade inception and the contractual foreign currency forward rate, recognized on a straight line basis over the term of the hedge. There is no comparable U.S. GAAP financial measure for amortized hedge costs/income.
• Adjusted book value is the U.S. GAAP book value (representing total shareholders' equity), less Accumulated Other Comprehensive Income ("AOCI") as recorded on the U.S. GAAP balance sheet.
• Adjusted book value per share is the adjusted book value at the period end divided by the outstanding common shares at the period end. The most comparable U.S. GAAP measure is total book value per share.

Because a significant portion of the company's business is conducted in Japan and foreign exchange rates are outside of management's control, Aflac believes it is important to understand the impact of translating Japanese yen into U.S. dollars. Adjusted earnings per diluted share "excluding current period foreign currency impact" are computed using the average yen/dollar exchange rate for the comparable prior year period, which eliminates fluctuations driven solely by yen-to-dollar currency rate changes.

[1] All notes payable including subordinated debentures for all periods after 2014 have been updated in accordance with ASU 2015-03 Simplifying the Presentation of Debt Issuance Costs which nets debt amounts with related deferred issuance costs.

[2] Effective January 1, 2019 the company has adopted ASU 2016-02 Leases, which resulted in $134 million of lease obligations that are included in notes payable.

[3] Adjusted capitalization ex-AOCI is the sum of notes payable, excluding pre-funding amounts, plus shareholders' equity excluding AOCI

[4] Adjusted capitalization is the sum of notes payable, excluding pre-funding amounts, plus shareholders' equity excluding unrealized gains and losses on investment securities and derivatives. Adjusted capitalization includes unrealized foreign currency translation gains (losses) and pension liability adjustment.

[5] Debt maturity amounts do not include discounts, premiums, deferred charges, or capital lease obligations.
