

Newmont Announces Increased 2022 Mineral Reserves of 96 Million Gold Ounces and 68 Million Gold Equivalent Ounces

DENVER, February 23, 2023 – Newmont Corporation (NYSE: NEM, TSX: NGT) reported higher gold Mineral Reserves ("reserves") of 96.1 million attributable ounces for 2022 compared to the Company's 92.8 million ounces at the end of 2021. Newmont has significant upside to other metals, including more than 15 billion pounds of copper reserves and nearly 600 million ounces of silver reserves.

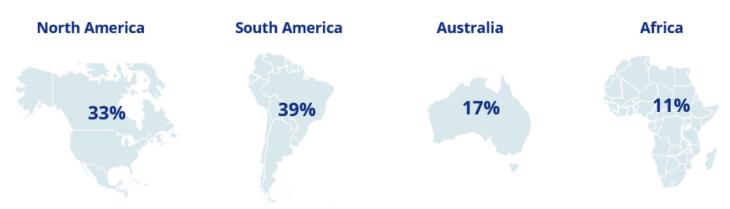

"In 2022, Newmont replaced depletion and grew reserves by nearly 4 percent as we continued to focus on extending mine life, developing districts and discovering new opportunities in the most favorable mining jurisdictions. Our diverse, global portfolio of operations and projects delivers steady production for at least the next decade, leading the industry with approximately six million gold ounces per year. Supported by the most extensive exploration program in the industry, our team is actively building a profitable and resilient production pipeline for the next several decades."

- Tom Palmer, President and Chief Executive Officer

2022 RESERVES & RESOURCES HIGHLIGHTS

- Robust gold reserves of 96.1 million ounces
- ✓ Over 90 percent of gold reserves in top-tier jurisdictions
- Addition of 8.6 million ounces in 2022 primarily due to 4.4 million attributable ounces from additions at Pueblo Viejo and 2.8 million from exploration at Newmont's managed operations; further improved by 3.1 million ounces from Newmont's increase in ownership of Yanacocha to 100 percent in 2022
- Underpinned by a strong base of operating sites with gold reserve life of 10 years or more, including Boddington, Tanami, Ahafo, Peñasquito, Cerro Negro, Merian, Pueblo Viejo and Nevada Gold Mines (NGM), and further enhanced by our six other managed mines and organic project pipeline
- ✓ Significant gold reserves per share with 120 ounces per 1,000 shares
- Measured & Indicated Gold Mineral Resources of 75.3 million ounces and Inferred Resources of 36.1 million ounces
- ✓ Significant exposure to copper with 15.7 billion pounds in reserves, 17.9 billion pounds in Measured & Indicated resources and 8.6 billion pounds in Inferred resources
- ✓ Additional exposure to other metals including silver, lead and zinc

PERCENTAGE OF GOLD RESERVES BY JURISDICTION¹

Newmont's reserve base is a key differentiator with over 90 percent of gold reserves located in top-tier jurisdictions, an average reserve grade of 1.09 grams per tonne and an operating reserve life of more than 10 years at six managed sites and two non-managed joint ventures, with significant upside potential from a robust organic project pipeline. In addition, Newmont has substantial exposure to other metals, with 68 million gold equivalent ounces² of reserves from copper, silver, lead, zinc and molybdenum.

North America includes 38.5 percent interest in Nevada Gold Mines; South America includes Newmont's 40 percent interest in Pueblo Viejo.

² Gold Equivalent Ounces (GEOs) are calculated using 2022 Mineral Reserve pricing for Gold (\$1,400/oz.), Copper (\$3.50/lb.), Silver (\$20.00/oz.), Lead (\$1.00/lb.), and Zinc (\$1.20/lb.) and Resource pricing for Gold (\$1,600/oz.), Copper (\$4.00/lb.), Silver (\$23.00/oz.), Lead (\$1.20/lb.), and Zinc (\$1.45/lb.) and metallurgical recoveries for each metal on a site by site basis, as metal * [(metal price * metal recovery) / (gold price * gold recovery)].

PROVEN & PROBABLE GOLD RESERVES

In millions of ounces

2021 Gold Reserves	92.8	
Additions	8.6	
Acquisitions ³	3.1	
Net Revisions	(1.2)	
Depletion	(7.2)	
2022 Gold Reserves	96.1	

For 2022, Newmont reported 96.1 million ounces of gold Mineral Reserves, a 3.6 percent increase from the prior year total of 92.8 million ounces. Additions of 8.6 million ounces and acquisitions³ of 3.1 million ounces were partially offset by depletion of 7.2 million ounces and unfavorable net revisions of 1.2 million ounces.

Additions before revisions of 8.6 million ounces through exploration and technical studies met the Company's target despite higher costs. Notable reserve additions for the year from Newmont's operating sites included:

- · Cerro Negro added 0.8 million ounces primarily due to drilling in the Eastern Districts
- Merian added 0.5 million attributable ounces primarily due to drilling at the Merian 2 open pit
- Tanami added 0.4 million ounces primarily due to drilling at Liberator and Auron
- Ahafo North added 0.2 million ounces primarily due to drilling
- Newmont's 40 percent interest in Pueblo Viejo added 4.4 million attributable ounces, and its 38.5 percent interest in NGM added 1.4 million attributable ounces

Net unfavorable revisions include 0.5 million ounces at Yanacocha due to updated models, technical assumptions and revised mine designs, as well as 0.2 million ounces at Merian and Éléonore due to revised technical assumptions and costs. Additional net negative revisions of 0.7 million ounces were attributable to NGM, mainly at Turquoise Ridge and Carlin. Negative revisions were partially offset by favorable revisions of 0.5 million ounces at Pueblo Viejo.

Newmont's 38.5 percent interest in NGM represented 18.6 million attributable ounces of gold reserves at year end, compared to 19.3 million ounces at the end of 2021. Newmont's 40 percent interest in Pueblo Viejo represented 8.2 million attributable ounces of gold reserves at year end, compared to 3.6 million ounces at the end of 2021.

Gold reserve grade improved 2 percent to 1.09 grams per tonne compared to 1.06 grams per tonne in the prior year, primarily due to higher grade reserves from the Company's 40 percent equity ownership in Pueblo Viejo and positive results from the Company's underground managed operations, including Cerro Negro, Tanami and Musselwhite, as well as increased equity ownership in Yanacocha.

MEASURED & INDICATED GOLD RESOURCES

INFERRED GOLD RESOURCES

In millions of ounces

in millions of ounces		
2021 Gold Resources	33.2	
Additions	2.6	
Acquisitions ³	4.3	
Divestitures ⁴	(0.4)	
Net Revisions	(1.8)	
Conversions	(1.8)	
2022 Gold Resources	36.1	

In 2022, Newmont reported Measured and Indicated Gold Mineral Resources of 75.3 million ounces, a 10 percent increase from the prior year total of 68.3 million ounces. Inferred Gold Mineral Resources totaled 36.1 million ounces, a 9 percent increase from the prior year total of 33.2 million ounces. In total, resource conversions to reserves were more than offset by a combination of acquisitions, additions and net positive revisions.

Measured and Indicated Gold Mineral Resources added through exploration programs were 2.8 million ounces and included notable additions before revisions of 0.5 million ounces at Ahafo South underground, 0.5 million ounces at Yanacocha, 0.4 million attributable ounces at NGM, 0.2 million ounces at Cerro Negro, 0.2 million ounces at Peñasquito and 0.2 million ounces at

³ In 2022, the Company increased its ownership interest in Yanacocha to 100% by acquiring Buenaventura's 43.65% and Sumitomo's 5% noncontrolling interest, respectively.

⁴ In November 2022, Newmont sold its 18.75% ownership in Agua Rica.

Ahafo North. Acquisitions added 8.2 million ounces, including 7.1 million ounces at Conga and 1.1 million ounces at Yanacocha, while the divestiture of Agua Rica had an impact of 1.8 million ounces.

Measured and Indicated Gold Mineral Resources reported net positive revisions of 4.4 million ounces primarily driven by 0.6 million ounces at Peñasquito, 0.5 million ounces at Tanami, 0.5 million ounces at CC&V, 0.5 million ounces at Musselwhite and 0.4 million ounces at Ahafo South underground. Additionally NGM added 1.4 million attributable ounces, primarily at Cortez and Carlin, and Pueblo Viejo added 0.5 million attributable ounces. Positive revisions were partially offset by negative revisions, including 0.4 million ounces at the Ahafo South open pit.

Inferred Gold Mineral Resources added through exploration programs were 2.6 million ounces and included notable additions before revisions of 0.4 million ounces at Cerro Negro, 0.4 million ounces at Ahafo South underground, 0.4 million ounces at Porcupine underground, 0.1 million ounces at Tanami and 0.1 million ounces at Éléonore. Additionally, NGM added 0.9 million attributable ounces. Acquisitions added 4.3 million ounces, including 2.6 million ounces at Yanacocha and 1.4 million ounces at Conga, while the divestiture of Agua Rica had an impact of 0.4 million ounces.

Inferred Gold Mineral Resources reported unfavorable net revisions of 1.8 million ounces, primarily driven by negative revisions of 0.3 million ounces at Ahafo South underground, 0.2 million ounces at Porcupine open pit, 0.1 million ounces at Ahafo South open pit and 0.1 million ounces at Éléonore. Additionally, Pueblo Viejo had negative revisions of 1.2 million attributable ounces. Negative revisions were partially offset by positive revisions of 0.2 million ounces at CC&V and 0.2 million attributable ounces at NGM

Newmont's Measured and Indicated Gold Mineral Resource grade increased slightly to 0.67 grams per tonne compared to 0.66 grams per tonne in the prior year. Inferred Gold Mineral Resource grade of 0.70 grams per tonne increased slightly compared to 0.69 grams per tonne in the prior year.

OTHER METALS

In 2022, copper reserves increased slightly to 15.7 billion pounds from 15.1 billion pounds in the prior year, primarily due to increased equity at Yanacocha. Measure and Indicated copper resources increased slightly to 17.9 billion pounds from 17.8 billion pounds, primarily due to increased equity at Conga and Yanacocha. Inferred copper resources remained flat at 8.6 billion pounds as compared to the prior year.

Silver reserves increased to 593 million ounces from 568 million ounces in the prior year, primarily due to increased equity at Yanacocha. Measured and Indicated silver resources also increased to 500 million ounces from 422 million ounces in the prior year, primarily due to increased equity at Yanacocha and Conga. Inferred silver resources decreased to 152 million ounces from 163 million ounces in the prior year, primarily due to the divestiture of Agua Rica and resource conversion at Cerro Negro.

Lead reserves decreased to 2.3 billion pounds from 2.6 billion pounds in the prior year, and zinc reserves also decreased to 5.5 billion pounds from 6.3 billion pounds. These decreases were primarily due to depletion at Peñasquito. Measured and Indicated lead resources increased to 1.6 billion pounds from 1.2 billion pounds, while Inferred lead resources decreased to 440 million pounds from 480 million pounds in the prior year. Measured and Indicated zinc resources increased to 3.7 billion pounds from 2.7 billion pounds and Inferred zinc resources decreased to 1.0 billion pounds from 1.1 billion pounds in the prior year. The increases in Measured and Indicated lead and zinc resources were primarily due to positive revision at Peñasquito. The decreases in Inferred lead and zinc resources were primarily due to negative revisions and conversion at Peñasquito.

EXPLORATION OUTLOOK

Newmont's attributable exploration expenditure for managed operations is expected to be approximately \$200 million in 2023 with 80 percent of total exploration investment dedicated to near-mine expansion programs and the remaining 20 percent allocated to the advancement of greenfield projects.

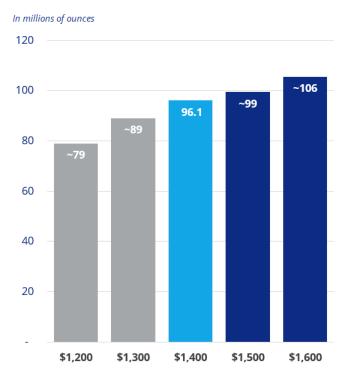

Additionally, Newmont's share of exploration investment for its non-managed joint ventures will total approximately \$25 million.

Geographically, the Company expects to invest approximately 32 percent in North America, 30 percent in South America, 18 percent in Africa and the remainder in Australia and other locations.

GOLD RESERVE SENSITIVITY

A \$100 increase in gold price would result in an approximate three percent increase in gold reserves while a \$100 decrease in gold price would result in an approximate seven percent decrease in gold reserves. These sensitivities assume an oil price of \$85 per barrel (WTI), Australian dollar exchange rate of \$0.75 and Canadian dollar exchange rate of \$0.80. These sensitivities assume all other inputs remain equal, including all cost and capital assumptions, which may impact the reality of these approximate estimates.

For additional details on Newmont's reported gold, copper, silver, lead, zinc and molybdenum Mineral Reserves and Mineral Resources, please refer to the tables at the end of this release.

RESERVE AND RESOURCE TABLES

Proven and probable reserves are based on extensive drilling, sampling, mine modeling and metallurgical testing from which we determined economic feasibility. The reference point for mineral reserves is the point of delivery to the process plant. Metal price assumptions, adjusted for our exchange rate assumption, are based on considering such factors as market forecasts, industry consensus and management estimates. The price sensitivity of reserves depends upon several factors including grade, metallurgical recovery, operating cost, waste-to-ore ratio and ore type. Metallurgical recovery rates vary depending on the metallurgical properties of each deposit and the production process used. The reserve tables below list the average metallurgical recovery rate for each deposit, which takes into account the relevant processing methods. The cut-off grade, or lowest grade of mineralization considered economic to process, varies between deposits depending upon prevailing economic conditions, mineability of the deposit, by-products, amenability of the ore to gold, copper, silver, lead, zinc or molybdenum extraction and type of milling or leaching facilities available. Reserve estimates may have non-material differences in comparison to our joint venture partners due to differences in classification and rounding methodology.

The proven and probable reserve figures presented herein are estimates based on information available at the time of calculation. No assurance can be given that the indicated levels of recovery of gold, copper, silver, lead, zinc and molybdenum will be realized. Ounces of gold or silver or pounds of copper, lead, zinc or molybdenum included in the proven and probable reserves are those contained prior to losses during metallurgical treatment. Reserve estimates may require revision based on actual production. Market fluctuations in the price of gold, copper, silver, lead, zinc and molybdenum, as well as increased production costs or reduced metallurgical recovery rates, could render certain proven and probable reserves containing higher cost reserves uneconomic to exploit and might result in a reduction of reserves.

The measured, indicated, and inferred resource figures presented herein are estimates based on information available at the time of calculation and are exclusive of reserves. A "mineral resource" is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade, or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling. The reference point for mineral resources is in situ. Mineral resources are sub-divided, in order of increasing geological confidence, into inferred, indicated and measured categories. Ounces of gold and silver or pounds of copper, zinc, lead, and molybdenum included in the measured, indicated and inferred resources are those contained prior to losses during metallurgical treatment. The terms "measured resource," "indicated resource," and "inferred resource" mean that part of a mineral resource for which quantity and grade or quality are estimated on the basis of geological evidence and sampling that is considered to be comprehensive, adequate, or limited, respectively. Market fluctuations in the price of gold, silver, copper, zinc, lead and molybdenum, as well as increased production costs or reduced metallurgical recovery rates, could change future estimates of resources.

We publish reserves annually, and will recalculate reserves at December 31, 2023, taking into account metal prices, changes, if any, to future production and capital costs, divestments and depletion as well as any acquisitions and additions during 2023.

Please refer to the reserves and resources cautionary statement at the end of the release.

⁽¹⁾ Gold reserves, at sites in which Newmont is the operator for 2022 and 2021 were estimated at a gold price of \$1,400 and 1,200 per ounce, respectively, unless otherwise noted. Reserves provided by other operators may use pricing that differs. Amounts presented may not recalculate in total due to rounding.

Tonnages include allowances for losses resulting from mining methods. Tonnages are rounded to the nearest 100,000.

Ounces are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated (3) amount of metal to be recovered through metallurgical extraction processes. Ounces may not recalculate as they are rounded to the nearest 10,000. Cut-off grades utilized in 2022 reserves were as follows: leach material not less than 0.10 gram per tonne.

Leach pad material is the material on leach pads at the end of the year from which gold remains to be recovered. In-process reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.

⁽⁶⁾ Cut-off grade utilized in 2022 reserves not less than 3.10 gram per tonne. (7)

Cut-off grade utilized in 2022 reserves not less than 5.00 gram per tonne. (8)

Cut-off grade utilized in 2022 reserves not less than 0.51 gram per tonne. (9)

Cut-off grade utilized in 2022 reserves not less than 4.00 gram per tonne.

Gold cut-off grade varies with level of silver, lead and zinc credits.

Gold cut-off grades utilized in 2022 reserves were as follows: oxide leach material not less than 0.12 gram per tonne and refractory mill material not less than 1.26 gram per tonne.

- (12) Gold cut-off grades utilized in 2022 were as follows: oxide mill material not less than 2.63 gram per tonne and refractory mill material varies with level of copper and silver credits.
- (13) In 2022, the Company increased its ownership interest in Yanacocha to 100% by acquiring Buenaventura's 43.65% noncontrolling interest and Sumitomo's 5% noncontrolling interest. Refer to Note 1 to Newmont's Consolidated Financial Statements for further information.
- Cut-off grade utilized in 2022 reserves not less than 0.31 gram per tonne.
- Cut-off grade utilized in 2022 reserves not less than 4.30 gram per tonne.
- Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpile reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.
- Amounts presented herein have been rounded to the nearest 10,000 for ounces and 100,000 for tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.
- The Pueblo Viejo mine, which is 40% owned by Newmont, is accounted for as an equity method investment. Reserve estimates provided by Barrick, the operator of Pueblo Viejo.
 - Project is currently undeveloped. Reserve estimates provided by the NuevaUnión joint venture.
- (20) Project is currently undeveloped. Reserve estimates provided by the Norte Abierto joint venture.
- Gold cut-off grade varies with level of copper credits.
- Cut-off grade utilized in 2022 reserves not less than 2.30 gram per tonne.
- Cut-off grade utilized in 2022 reserves not less than 0.60 gram per tonne.
- Cut-off grade utilized in 2022 reserves not less than 1.60 gram per tonne.
- Cut-off grade utilized in 2022 reserves not less than 0.56 gram per tonne.
- Cut-off grade utilized in 2022 reserves not less than 0.52 gram per tonne.
- Reserve estimates provided by Barrick, the operator of the NGM joint venture.
- ⁽²⁸⁾ Currently included in Corporate and Other in Note 3 of Newmont's Consolidated Financial Statements.

Resources, at sites in which Newmont is the operator, are estimated at a gold price of \$1,600 and \$1,400 per ounce for 2022 and 2021, respectively. Resources provided by other operators may use pricing that differs. Tonnage amounts have been rounded to the nearest 100,000. Ounces may not recalculate as they have been rounded to the nearest 10,000.

⁽³⁾ Ounces are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Ounces may not recalculate as they are rounded to the nearest 10,000.

⁽⁴⁾ Project is currently undeveloped. Resource estimates provided by Teck Resources, the Galore Creek joint venture partner.

⁽⁵⁾ Resource estimates provided by Barrick, the operator of Pueblo Viejo.

Project is currently undeveloped. Resource estimates provided by the NuevaUnión joint venture.

Project is currently undeveloped. Resource estimates provided by the Norte Abierto joint venture.

⁽⁸⁾ Project is currently undeveloped. Resource estimates provided by Yamana, the operator of the Agua Rica joint venture. In November 2022, the Company sold its 18.75% ownership in Agua Rica. Refer to Note 8 to Newmont's Consolidated Financial Statements for further information.

⁽⁹⁾ Resource estimates provided by Barrick, the operator of the NGM joint venture

In 2022, the Company increased its ownership interest in Yanacocha to 100% by acquiring Buenaventura's 43.65% noncontrolling interest and Sumitomo's 5% noncontrolling interest. Refer to Note 1 to Newmont's Consolidated Financial Statements for further information.

Amounts presented herein have been rounded to the nearest 10,000 for ounces and 100,000 for tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.

⁽¹⁾ Copper reserves, at sites in which Newmont is the operator, for 2022 and 2021 were estimated at a copper price of \$3.50 and \$2.75 per pound, respectively. Reserves provided by other operators may use pricing that differs. Amounts presented may not recalculate in total due to rounding. (2)

Tonnages include allowances for losses resulting from mining methods. Tonnages are rounded to nearest 100,000.

Reserve estimates relate to the undeveloped Yanacocha Sulfides project. Copper cut-off grade varies with level of gold and silver credits. (5)

Project is currently undeveloped. Reserve estimates provided by the Nueva Unión joint venture. (6)

(7)

Currently included in Corporate and Other in Note 3 of Newmont's Consolidated Financial Statements. Project is currently undeveloped. Reserve estimates provided by the Norte Abierto joint venture.

Copper cut-off grade varies with level of gold credits.

Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpiles are reported separately where pounds exceed 100 million and are greater than 5% of the total site reported reserves. (10)

Reserve estimates provided by Barrick, the operator of the NGM joint venture.

(11) In 2022, the Company increased its ownership interest in Yanacocha to 100% by acquiring Buenaventura's 43.65% noncontrolling interest and Sumitomo's 5% noncontrolling interest. Refer to Note 1 to Newmont's Consolidated Financial Statements for further information.

(12) Amounts presented herein have been rounded to the nearest 10 million for pounds and 100,000 for tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.

⁽¹⁾ Resources are reported exclusive of reserves. Amounts presented may not recalculate in total due to rounding.

Project is currently undeveloped. Resource estimates provided by Teck Resources. (5)

Project is currently undeveloped. Resource estimates provided by the NuevaUnión joint venture. Project is currently undeveloped. Resource estimates provided by the Norte Abierto joint venture. (6)

Resource estimates provided by Barrick, the operator of the NGM joint venture

⁽²⁾ Resources, at sites in which Newmont is the operator, are estimated at a copper price of \$4.00 and \$3.25 per pound for 2022 and 2021, respectively. Resources provided by other operators may use pricing that differs. Tonnage amounts have been rounded to the nearest 100,000.

Pounds are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Pounds may not recalculate as they are rounded to the nearest 10 million.

⁽⁷⁾ Project is currently undeveloped. Resource estimates provided by Yamana, the operator of the Agua Rica joint venture. In November 2022, the Company sold its 18.75% ownership in Agua Rica. Refer to Note 8 of Newmont's Consolidated Financial Statements for further information.

In 2022, the Company increased its ownership interest in Yanacocha to 100% by acquiring Buenaventura's 43.65% noncontrolling interest and Sumitomo's 5% noncontrolling interest. Refer to Note 1 to Newmont's Consolidated Financial Statements for further information.

⁽¹⁰⁾ Amounts presented herein have been rounded to the nearest 10 million for pounds and 100,000 for tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.

- (1) Silver reserves, at sites in which Newmont is the operator, for 2022 and 2021 were estimated at a silver price of \$20 per ounce. Reserves provided by other operators may use pricing that differs. Amounts presented may not recalculate in total due to rounding.
- Tonnages include allowances for losses resulting from mining methods. Tonnages are rounded to nearest 100,000.
- Ounces are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Ounces may not recalculate as they are rounded to the nearest 10,000.
- Silver cut-off grade varies with gold, lead and zinc credits.
- Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpile reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.
- Silver cut-off grade varies with gold and copper credits.
- Leach pad material is the material on leach pads at the end of the year from which silver remains to be recovered. In-process reserves are reported separately where ounces exceed 100,000 and are greater than 5% of the total site-reported reserves.
- Silver cut-off grade varies with gold credits.
- (9) The Pueblo Viejo mine, which is 40% owned by Newmont, is accounted for as an equity method investment. Reserve estimates provided by Barrick, the operator of Pueblo Viejo.
- (10) Project is currently undeveloped. Reserve estimates provided by the NuevaUnión joint venture.
- Currently included in Corporate and Other in Note 3 of Newmont's Consolidated Financial Statements.
- Project is currently undeveloped. Reserve estimates provided by the Norte Abierto joint venture.
- Reserve estimates provided by Barrick, the operator of the NGM joint venture.
- (14) In 2022, the Company increased its ownership interest in Yanacocha to 100% by acquiring Buenaventura's 43.65% noncontrolling interest and Sumitomo's 5% noncontrolling interest. Refer to Note 1 to Newmont's Consolidated Financial Statements for further information.
- Amounts presented herein have been rounded to the nearest 10,000 for ounces and 100,000 for tonnes and therefore may not agree to the respective Technical Report Summaries provided for certain properties as provided under exhibit 96.

Resources are reported exclusive of reserves.

Resources for NuevaUnión are estimated based on a molybdenum price set by NuevaUnión joint venture. Tonnage amounts have been rounded to the nearest 100,000.

(3) Pounds are estimates of metal contained in ore tonnages and do not include allowances for processing losses. Metallurgical recovery rates represent the estimated amount of metal to be recovered through metallurgical extraction processes. Pounds may not recalculate as they are rounded to the nearest 10 million.

(4) Project is currently undeveloped. Resource estimates provided by NuevaUnión joint venture.

Project is currently undeveloped. Resource estimates provided by Yamana, the operator of the Agua Rica joint venture. In November 2022, the Company sold its 18.75% ownership in Agua Rica. Refer to Note 8 of Newmont's Consolidated Financial Statements for further information.

Cautionary Statement Regarding Reserve and Resource Estimates:

The reserves stated herein were prepared in compliance with Subpart 1300 of Regulation S-K adopted by the United States Securities and Exchanges Commission ("the SEC") and represent the amount of gold, copper, silver, lead, zinc and molybdenum estimated, at December 31, 2022, could be economically and legally extracted or produced at the time of the reserve determination. The term "economically," as used in this definition, means that profitable extraction or production has been established or analytically demonstrated in at a minimum, a pre-feasibility study to be viable and justifiable under reasonable investment and market assumptions. The term "legally," as used in this definition, does not imply that all permits needed for mining and processing have been obtained or that other legal issues have been completely resolved. However, for a reserve to exist, Newmont (or our joint venture partners) must have a justifiable expectation, based on applicable laws and regulations, that issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with Newmont's (or our joint venture partners') current mine plans. Reserves in this presentation are aggregated from the proven and probable classes. The term "Proven reserves" used in the tables of the appendix means reserves for which (a) quantity is estimated from dimensions revealed in outcrops, trenches, workings or drill holes; (b) grade and/or quality are estimated from the results of detailed sampling; and (c) the sites for inspection, sampling and measurements are spaced so closely and the geologic character is sufficiently defined that size, shape, depth and mineral content of reserves are well established. The term "Probable reserves" means reserves for which quantity and grade are estimated from information similar to that used for Proven reserves, but the sites for sampling are farther apart or are otherwise less closely spaced. The degree of assurance, although lower than that for Proven reserves, is high enough to assume continuity between points of observation. Newmont classifies all reserves as Probable on its development projects until a year of production has confirmed all assumptions made in the reserve estimates. Proven and Probable reserves include gold, copper, silver, zinc, lead or molybdenum attributable to Newmont's ownership or economic interest. Proven and Probable reserves were calculated using cut-off grades. The term "cutoff grade" means the lowest grade of mineralized material considered economic to process. Cut-off grades vary between deposits depending upon prevailing economic conditions, mineability of the deposit, byproducts, amenability of the ore to gold, copper, silver, zinc, lead or molybdenum extraction and type of milling or leaching facilities available.

Estimates of Proven and Probable reserves are subject to considerable uncertainty. Such estimates are, or will be, to a large extent, based on the prices of gold, silver, copper, zinc, lead and molybdenum and interpretations of geologic data obtained from drill holes and other exploration techniques, which data may not necessarily be indicative of future results. If our reserve estimations are required to be revised using significantly lower gold, silver, zinc, copper, lead and molybdenum prices as a result of a decrease in commodity prices, increases in operating costs, reductions in metallurgical recovery or other modifying factors, this could result in material write-downs of our investment in mining properties, goodwill and increased amortization, reclamation and closure charges. Producers use pre-feasibility and feasibility studies for undeveloped ore bodies to derive estimates of capital and operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the predicted configuration of the ore body, expected recovery rates of metals from the ore, the costs of comparable facilities, the costs of operating and processing equipment and other factors. Actual operating and capital cost and economic returns on projects may differ significantly from original estimates. Further, it may take many years from the initial phases of exploration until commencement of production, during which time, the economic feasibility of production may change. Estimates of resources are subject to further exploration and development, are subject to additional risks, and no assurance can be given that they will eventually convert to future reserves. Inferred resources, in particular, have a great amount of uncertainty as to their existence and their economic and legal feasibility. Investors are cautioned not to assume that any part of all of the Inferred resource exists or is economically or legally mineable. The Company cannot be certain that any part or parts of the resource will ever be converted into reserves. In addition, if the price of gold, silver, copper, zinc, lead or molybdenum declines from recent levels, if production costs increase, grades decline, recovery rates decrease or if applicable laws and regulations are adversely changed, the indicated level of recovery may not be realized or mineral reserves or resources might not be mined or processed profitably. If we determine that certain of our mineral reserves or resources have become uneconomic, this may ultimately lead to a reduction in our aggregate reported mineral reserves and resources. Consequently, if our actual mineral reserves and resources are less than current estimates, our business, prospects, results of operations and financial position may be materially impaired. For additional information see the "Proven and Probable Reserve" and "Measured and Indicated and Inferred Resource" tables herein and in the Company's Form 10-K, filed on February 23, 2023, with the SEC.

Cautionary Statement Regarding Forward Looking Statements:

This release may contain "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by such sections and other applicable laws. Such forward-looking statements may include, without limitation, estimates and expectations of future production, reserve estimates, exploration outlook and expected expenditure, and operational and financial performance. Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, such statements are subject to risks, uncertainties, assumptions and other factors, which could cause actual results to differ materially from future results expressed or implied by the "forward-looking statements". Such assumptions, include, but are not limited to the key assumptions set forth on page 4 hereof. Investors are also encouraged to refer to the Company's 2022 Form 10-K, filed on February 23, 2023, with the SEC under the headings "Risk Factors" and "Forward-Looking Statements" for additional information, The Company does not undertake any obligation to release publicly revisions to any "forward-looking statement," including, without limitation, outlook, to reflect events or circumstances after the date of this news release, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. Investors should not assume that any lack of update to a previously issued "forward-looking statement" constitutes a reaffirmation of that statement. Continued reliance on "forward-looking statements" is at investors' own risk.

About Newmont

Newmont is the world's leading gold company and a producer of copper, silver, zinc and lead. The Company's world-class portfolio of assets, prospects and talent is anchored in favorable mining jurisdictions in North America, South America, Australia and Africa. Newmont is the only gold producer listed in the S&P 500 Index and is widely recognized for its principled environmental, social and governance practices. The Company is an industry leader in value creation, supported by robust safety standards, superior execution and technical expertise. Newmont was founded in 1921 and has been publicly traded since 1925.
