Newmont Mining - Stifel Nicolaus Conference Call
Russell Ball, EVP and CFO

June 26, 2012

Cautionary Statement

Stifel Nicolaus had no involvement in the preparation of this presentation and, accordingly, makes no representation or warranty as to the accuracy or completeness of any of the information or data included therein and expressly disclaims any and all liability relating to or resulting from use of this presentation.

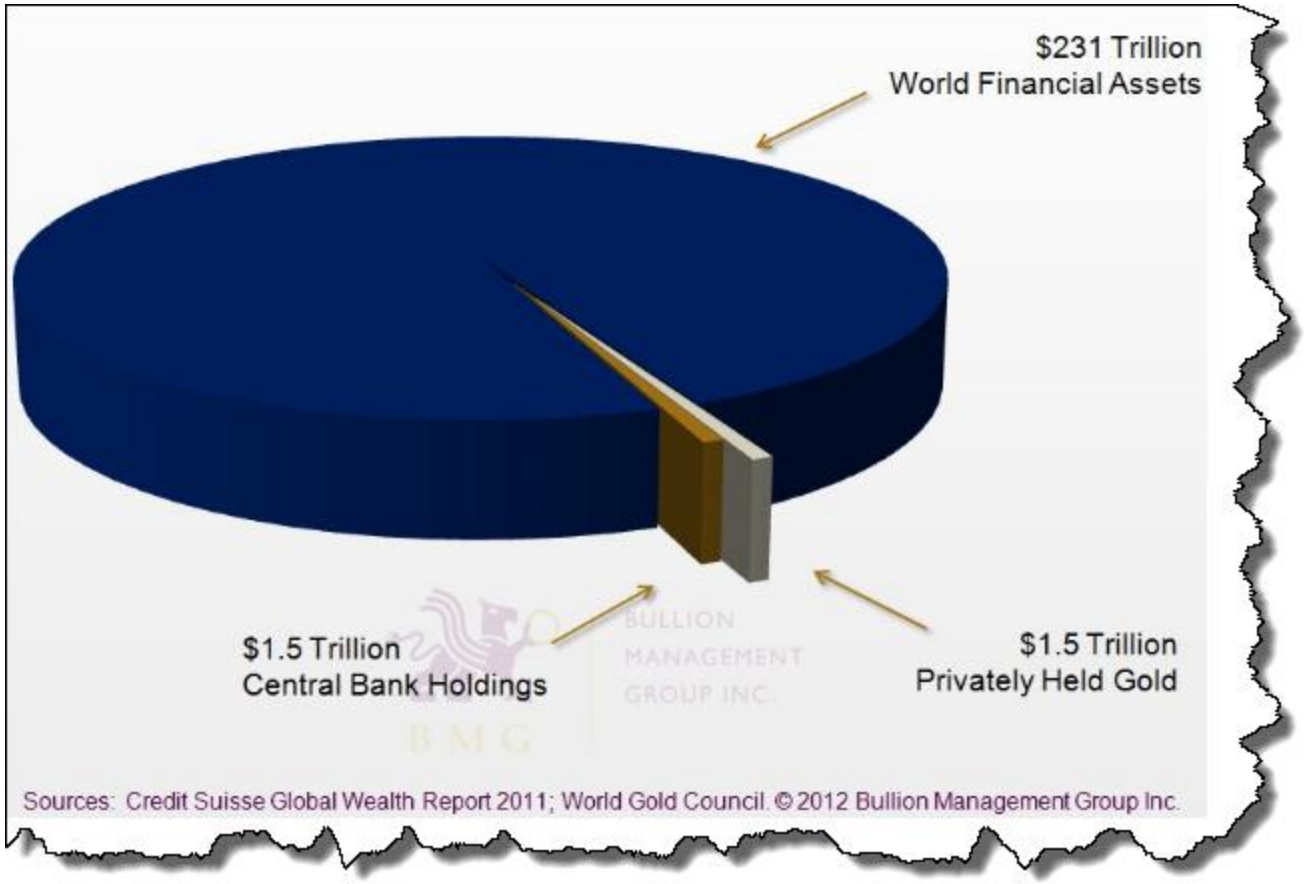

Cautionary Statement Regarding Forward Looking Statements, Including 2012 Outlook:

This presentation contains "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by those sections and other applicable laws. Those forward-looking statements include (without limitation) estimates and expectations of, and statements regarding: (i) the Company's strategy and plans; (ii) future equity gold and equity copper production; (iii) future operating, sales and other costs; (iv) future capital expenditures; (v) project returns; (vi) project start dates, ramp up, life, pipeline timelines, including commencement of mining, drilling and stage gate advancement and expansion opportunities; (vii) potential ounces or tons of reserves, NRM and potential resources; (viii) exploration pipeline, potential or upside, opportunities, growth and growth potential; (ix) dividend payments and increases; (x) future liquidity, cash and balance sheet expectations; and (xi) other financial outlook indicators relation to the Company's operations and projects. Those forward-looking statements include (without limitation) statements that use forward-looking terminology such as "may", "will", "expect", "predict", "anticipate", "believe", "continue", "potential", "target", "goal", "opportunity", "outlook", or the negative or other variations of those terms or comparable terminology. Estimates or expectations of future events or results are based upon certain assumptions, which may prove to be incorrect. Those assumptions include (without limitation): (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company's projects being consistent with current expectations and mine plans; (iii) political, social and legal developments in any jurisdiction in which the Company conducts business being consistent with its current expectations; (iv) certain exchange rate assumptions for the Australian dollar to the U.S. dollar, as well as the other exchange rates being approximately consistent with current levels; (v) certain price assumptions for gold, copper and oil; (vi) prices for key supplies being approximately consistent with current levels and such supplies otherwise being available on bases consistent with the Company's current expectations; and (vii) the accuracy of our current mineral reserve and mineral resource estimates and exploration information. Where the Company expresses or implies an expectation or belief as to future events or results, that expectation or belief is expressed in good faith and is believed to have a reasonable basis. However, forward-looking statements are subject to risks, uncertainties and other factors that could cause actual results to differ materially from future results expressed, projected or implied by the "forward-looking statements". Those risks, uncertainties and other factors include (without limitation): (i) gold and other metals price volatility; (ii) currency fluctuations; (iii) increased capital and operating costs, and scarcity of and competition for required labor and supplies; (iv) variances in oregrade or recovery rates from those assumed in mining plans; (v) operating or technical difficulties; (vi) political and operational risks; (vii) community relations, conflict resolution and outcome of projects or oppositions; and (viii) governmental regulation and judicial outcomes. For a more detailed discussion of such risks and other factors, see the Company's 2011 Annual Report on Form 10-K, filed on February 24, 2012, with the Securities and Exchange Commission ("SEC"), as well as the Company's other SEC filings. These forward-looking statements are not guarantees of future performance, given that they involve risks and uncertainties. The Company does not undertake any obligation to release publicly revisions to any forward-looking statement except as may be required under applicable securities laws. Investors should not assume that any lack of update to a previously issued forward-looking statement constitutes a reaffirmation of that statement. Continued reliance on forward-looking statements is at investors' own risk. In addition, some of the statements in this presentation are based on assumptions or methodologies (such as commodity prices) or subject to cautionary statements that are discussed in the notes found at the end of this presentation.

Cautionary Note to U.S. Investors -The United States Securities and Exchange Commission permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce in accordance with Industry Guide 7. We use certain terms on this presentation, such as "measured," "indicated," and "inferred" resources, which the SEC guidelines prohibit U.S. registered companies from including in their filings with the SEC. U.S. Investors are urged to consider closely the disclosure in our Form 10- K, which may be found on our website or the SEC's website ***http://www.sec.gov/edgar.shtml***

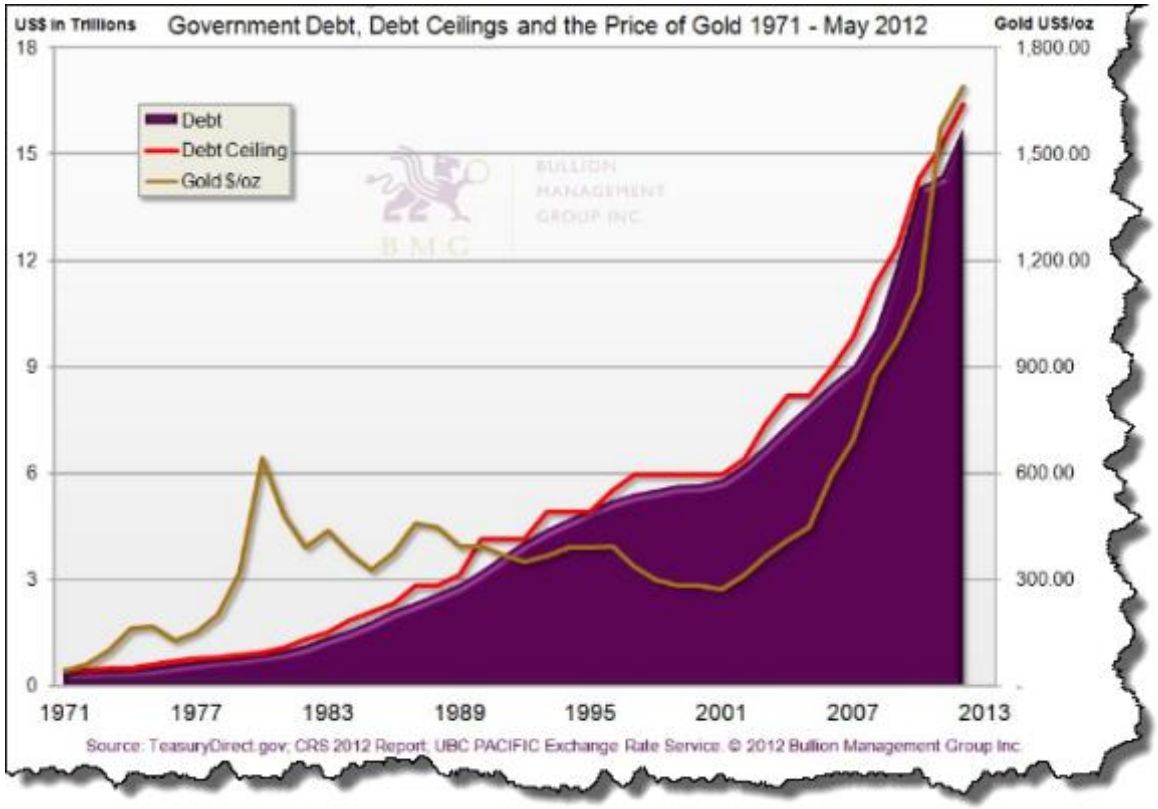

Gold is Under-Owned by the Market

- Gold has outperformed cash, bonds, and equity over past decade
- Over the long-term, only asset negatively correlated with stocks, bonds, and cash
- Current levels of investment indicate potential for increased investor base

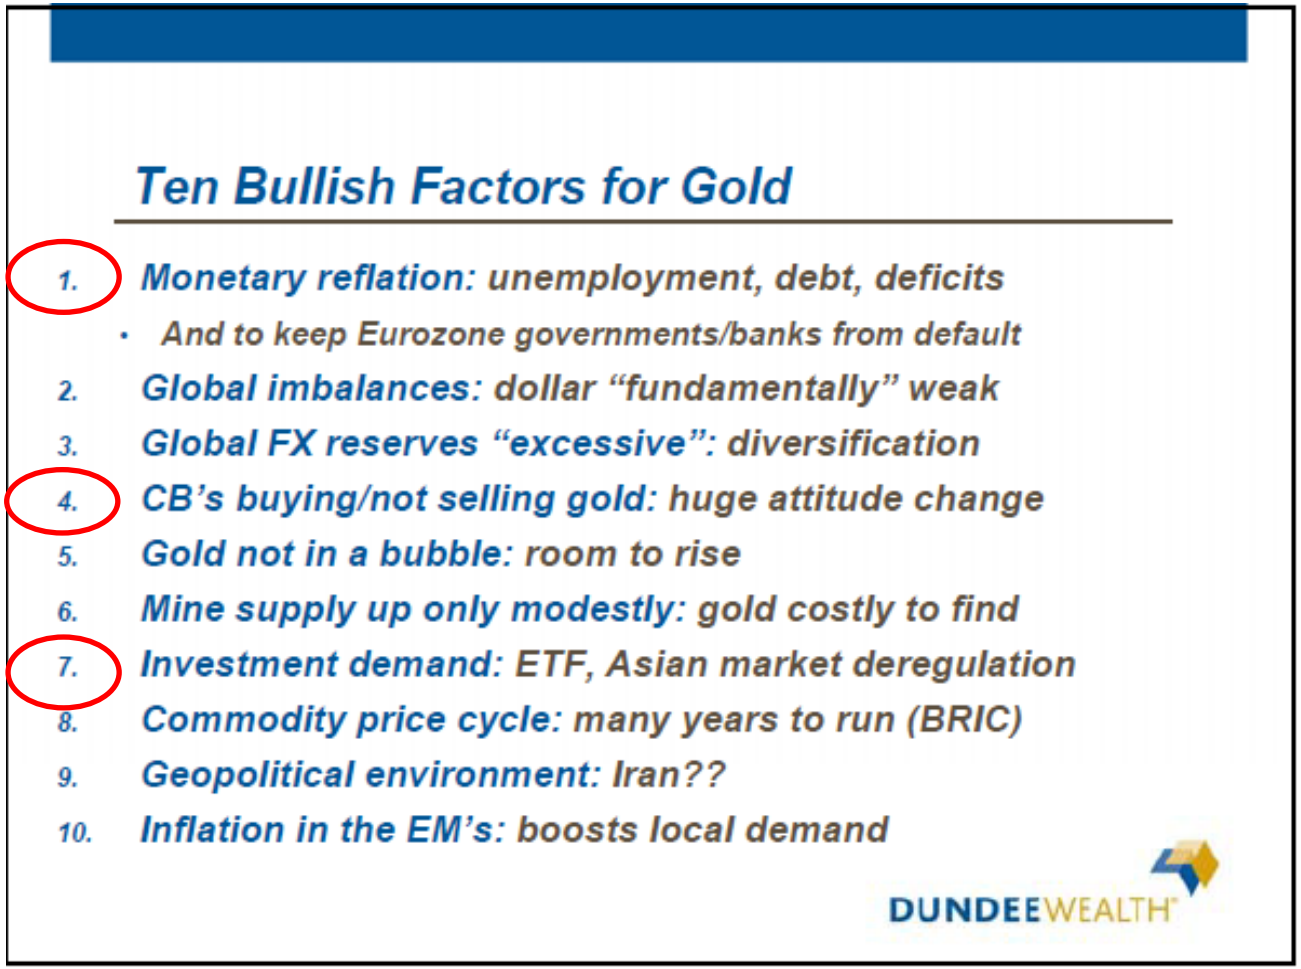

Macro-Economic Factors Supporting Bull Market Remain Strong

- Recent flight to US dollar has more to do with Euro weakness than dollar strength
- US has weak jobs data, potential for further monetary easing, and political environment incapable of addressing fiscal issues
- Eurozone crisis continues with potential for Greek exit and contagion across the region
- China's growth is slowing but even at ~8% will fuel continued demand for jewelry and physical investment

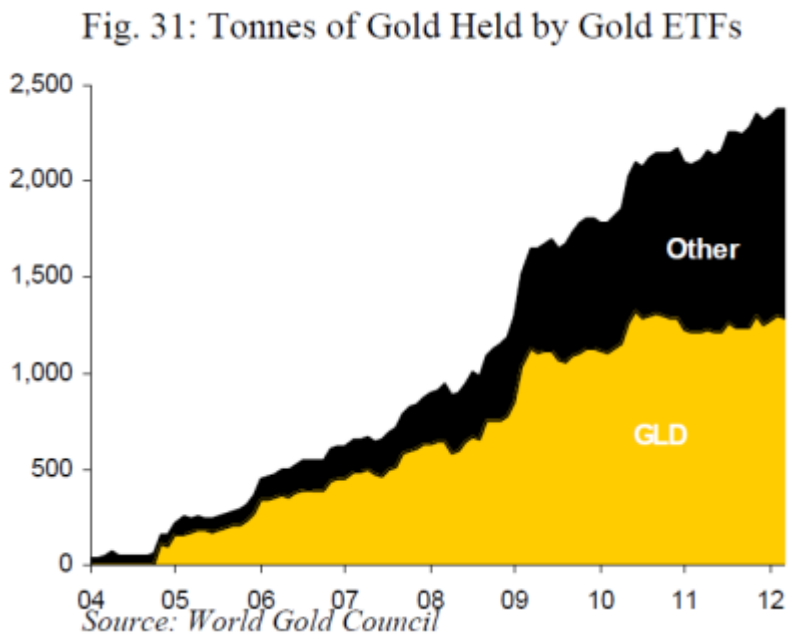

Gold Price Perspective

Gold Price Perspective

Bullish Fundamentals: ETF's and Investment Demand

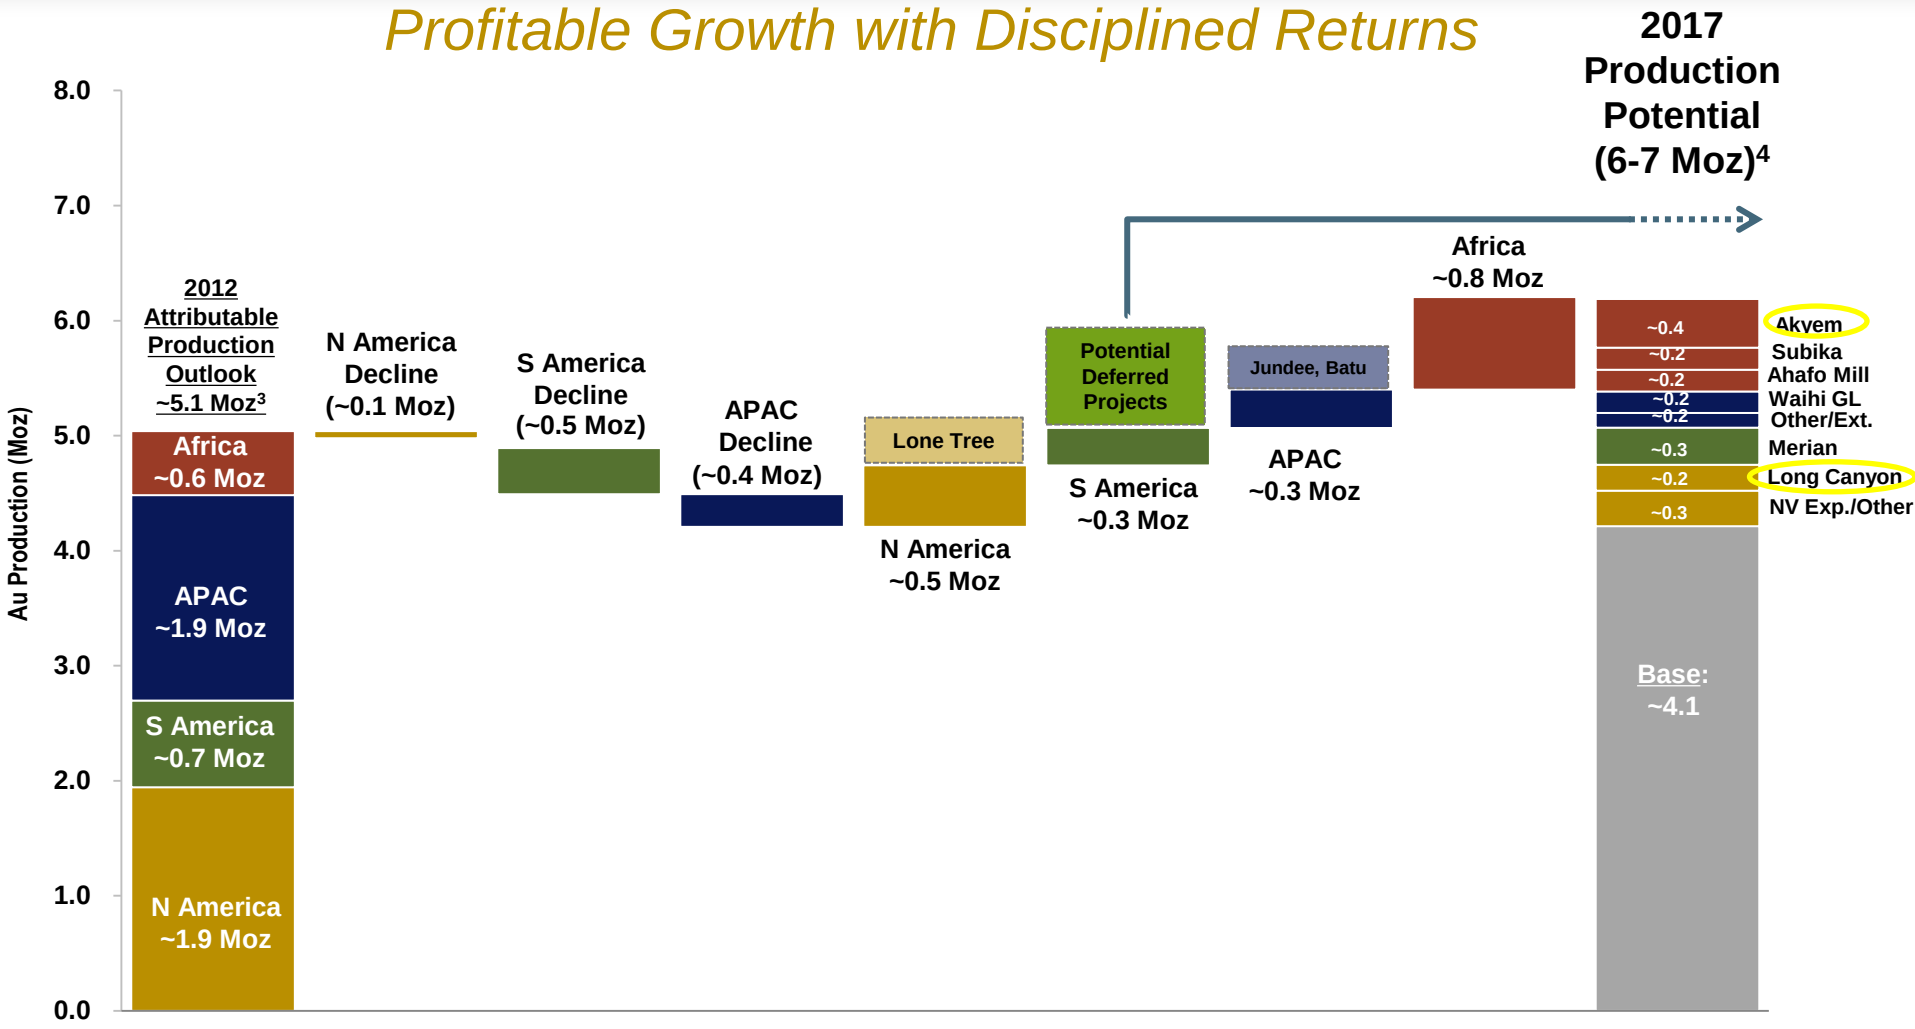

Enhancing Value Through Profitable Growth, Disciplined Returns and Exploration Potential

	Attributable Basis
Profitable Growth	▪ Profitable gold production potential of 6-7Moz by 2017[1]
Disciplined Returns	▪ Disciplined risk-adjusted returns
Exploration Potential	▪ Option to add ~90 Moz Au and ~9 Blbs Cu reserves between 2011-2020[2]
Balance Sheet Strength	▪ Access to capital with an investment grade balance sheet and strong operating cash flows to support profitable growth
Industry-Leading Dividend	▪ Committed to returning capital to shareholders

Our Current Growth Potential, Adjusted for Delays of our Peruvian Projects, is Between 6 and 7 Million Ounces by 2017

Regional Overview

South America
Yanacocha

2011 Reserves: 10.8 Moz Au and 1.7 Blb Cu
2011 NRM: 7.2 Moz Au and 0.8 Blb Cu

2012 Outlook[5]	
Attributable Gold Production (koz)	700 – 750
CAS ($/oz)	$480 – $530
Attributable Development Capex ($M)	$725 – $840
Attributable Sustaining Capex ($M)	$225 – $260
(Incl Attributable Capex - Conga ($M)	*$600 – $650)*

2017 Potential[6]	
Attributable Gold Production (koz)	~1,300 – 1,400
Gold Contribution from Projects (koz)	~1,100 – 1,200
Attributable Development Capex for Projects ($M)	~$3,000 – $3,100

Outlook as of February 24, 2012.

Conga Update[7]: *Conga Progressing on a Measured Basis Contingent Upon Capital Cost Reductions and Future Community Support*

- Independent review **confirmed EIA** meets Peruvian and International standards
- 2012-2013 revised spending estimated at **2/3 less** than originally planned development capex during the same period *(i.e., ~$440M versus ~$1.5 B attributable)*
- 2012-2013 spending now focused primarily on **water supply and quality** improvements, EPCM and camp maintenance and *long lead equipment purchases*
- Further development of Conga contingent upon capital cost reductions required to generate **acceptable project returns** as well as **local** community and Peruvian government *support*
  - First potential production would be early 2017

Exploration Upside

Strong Reserve and NRM Growth

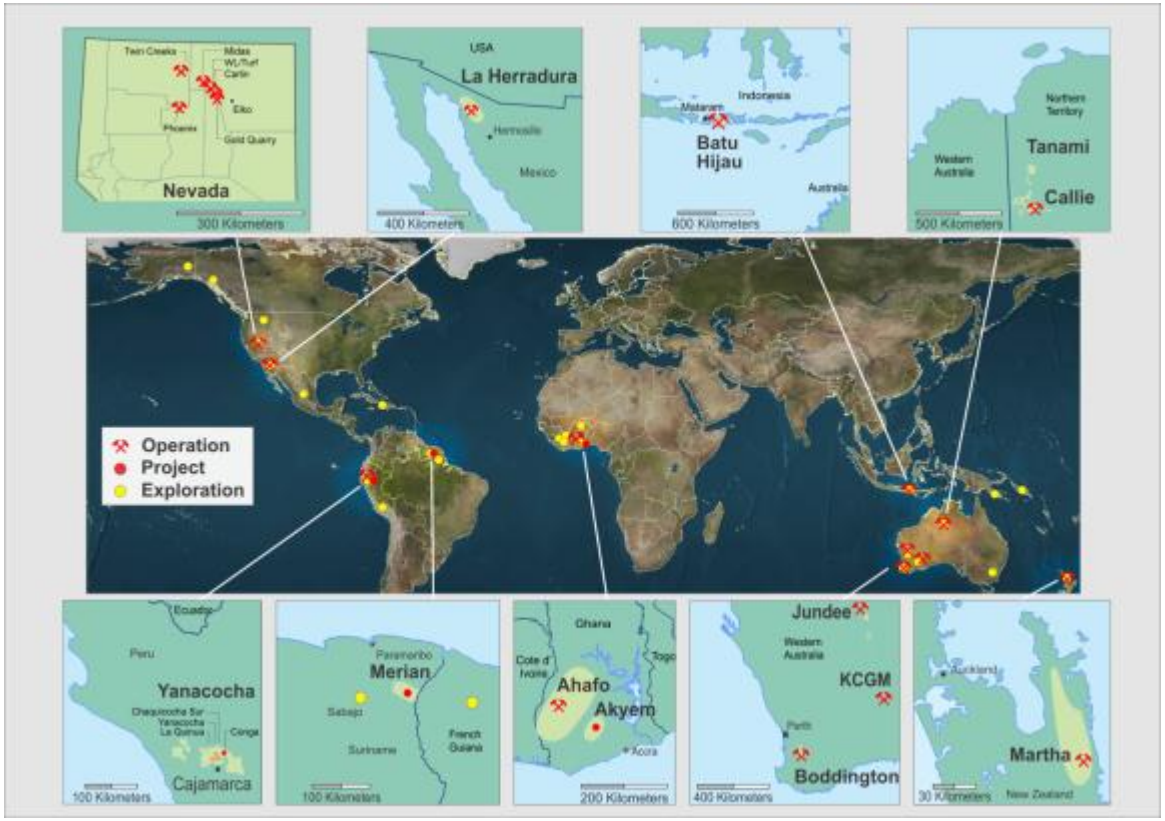

Attributable Net Gold Reserve and NRM Growth

Exploration Upside

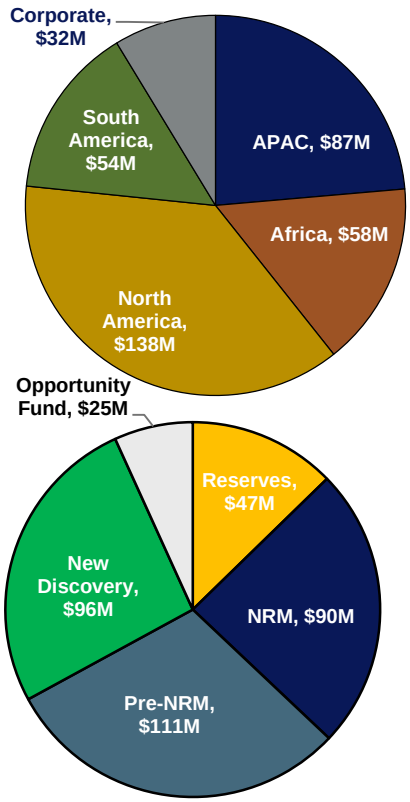

*Balanced Exploration Program **Between** Reserves, NRM and Discoveries*

Attributable Expensed Exploration Outlook is $360-390M in 2012

2012:

Exploration Expense (~$370M)

Addressing Industry Challenges

Increasing Resource Nationalism
Tax and royalty increases, more demands on social-license and more pressure from host governments

- Re-evaluating project approvals and sequencing based on risk profile and return potential

Increasing Operating and Capital Pressures
Investors focused on cost control, increasing political and technical risk, and returns on and of capital

- Recently formed restructuring team led by CFO and focused on total costs of production from exploration to reclamation

Gold ETF Outperforming
Gold up 10% in 2011 and 142% over the last 5 years; senior gold equities down 15% in 2011 and up 29%, respectively, in the same period

- Newmont is effectively addressing the risks associated with gold equities while providing industry-leading dividend as opposed to ETF holding costs

Mining Valuation Multiples Compressing
Diversified and Gold valuations down over 25% from 2010

- Balance sheet discipline creates leadership in per share metrics

Enhancing Value Through Profitable Growth, Disciplined Returns and Exploration Potential

	Attributable Basis
Profitable Growth	▪ Profitable gold production potential of 6-7Moz by 2017[1]
Disciplined Returns	▪ Disciplined risk-adjusted returns
Exploration Potential	▪ Option to add ~90 Moz Au and ~9 Blbs Cu reserves between 2011-2020[2]
Balance Sheet Strength	▪ Access to capital with an investment grade balance sheet and strong operating cash flows to support profitable growth
Industry-Leading Dividend	▪ Committed to returning capital to shareholders

Delivering on our Plans in a Safe, Environmentally and Socially Responsible Manner

- **Dow Jones Sustainability Index (DJSI)**
  - Fifth consecutive year selected to the DJSI World
- **ISO 14001 Certification**
  - Certification complete at 100% of sites in 2011
- **International Cyanide Code Certification**
  - 100% Certification at all sites as of February 2012
- **Global Greenhouse Gas (GHG) Inventory**
  - Global GHG inventory reported to The Climate Registry (TCR) and verified by Bureau Veritas
  - Selected for the Carbon Disclosure Project (CDP) S&P 500 Leadership Index.
- **Mine Closure & Reclamation**
  - Nevada Excellence in Mine Reclamation Awards and One Billion Trees Award (Indonesia)

Delivering on our Plans in a Safe, Environmentally and Socially Responsible Manner

- **Corporate Responsibility Magazine**
  - Ranked 42nd overall in 2012 on 100 Best Corporate Citizens

- **Community Relationships Review (CRR)**
  - Unprecedented independent review of Newmont relationships with communities; implementation plans are underway to respond to the CRR recommendations
  - Rollout of our revised social responsibility standards
  - Development and implementation of our social audit program
  - Conflict Management training in partnership with RESOLVE.
  - Implemented our ESR-Exploration Guidebook

Appendix B

Project Plan Progressing[17]

Tangible Steps in Advancing the Project Portfolio

Akyem

- Average annual production (1st 5 years): ~350 - 450Koz gold; initial production expected ~2014
- Engineering essentially complete
- Civil and concrete works well advanced
- First structural steel erected

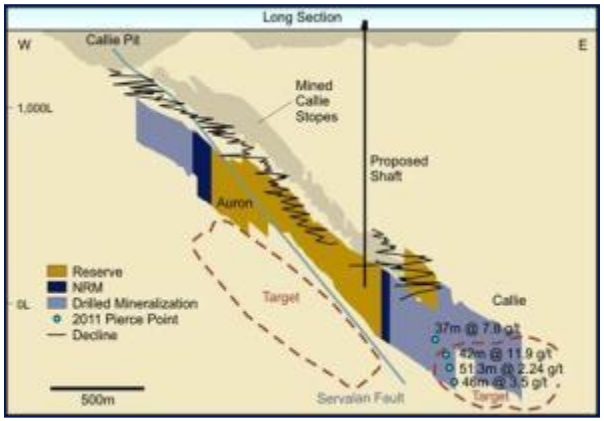

Conga[18]

- Potential annual attributable production (1st 5 years): ~300 - 350Moz gold; 80 - 120Mlbs copper
- Engineering ~85% complete
- Construction activities remain suspended

Tanami Shaft

- Average annual production (1st 5 years): ~60 - 90Koz gold; total annual production: ~340 - 400Koz gold; initial production expected ~2015
- Detailed engineering in process
- Shaft pilot hole underway

Recent Developments in North America

Tangible Steps in Advancing the Project Portfolio

Emigrant

- Average annual production (1st 5 years): ~80 - 90Koz gold
- Commercial production expected ~2013 with startup in 2012

Vista

- Oxide layback that will provide leach ore and feed to Juniper mill
- Average annual production of ~100Koz

Phoenix Copper Leach

- Average annual production (1st 5 years): ~10 - 20Mlb;
- Initial production expected ~2014
- By-product credit to Nevada CAS
- Ore placement begun on leach pad

North America

Long Canyon – Start Date ~2017

Project Description

A Carlin-Type trend with potential for regional synergies

Profitable Growth

- Gold: ~200 – 300 koz/yr

Disciplined Returns

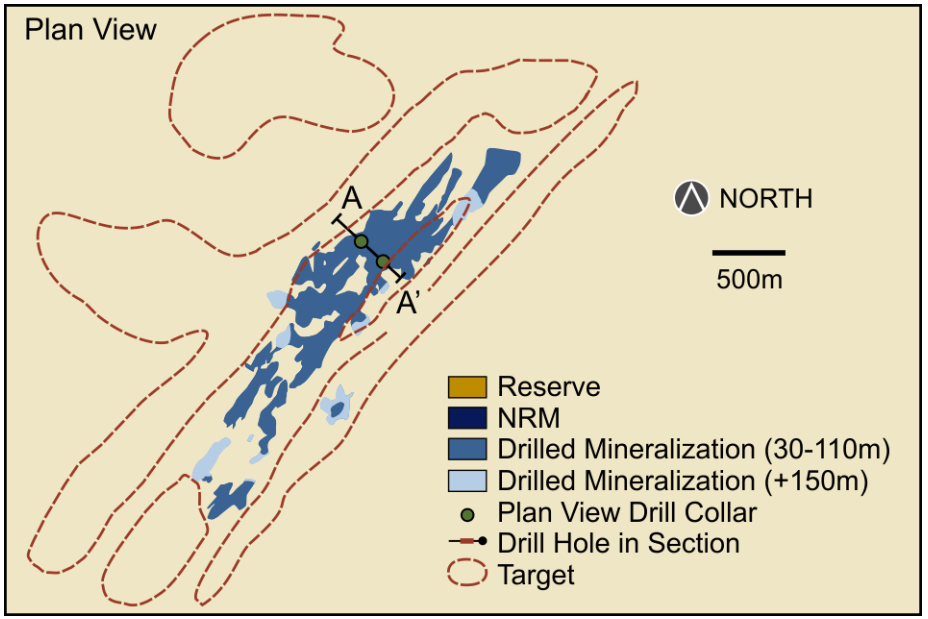

- Development Capex: ~$500 – $700M
- Operating Costs: ~$375 – $520/oz

Project Milestones

- Plan of Operations submitted in Q1 2012
- Completed 278 holes in 2011; ~59km
- Step out drilling extended mineralization 1km along strike

Project Update

- NRM declaration expected in 2012 resource statement[19]
- Potentially new mineralized structures identified; follow up drilling underway
- Targeting district potential of ~8Moz

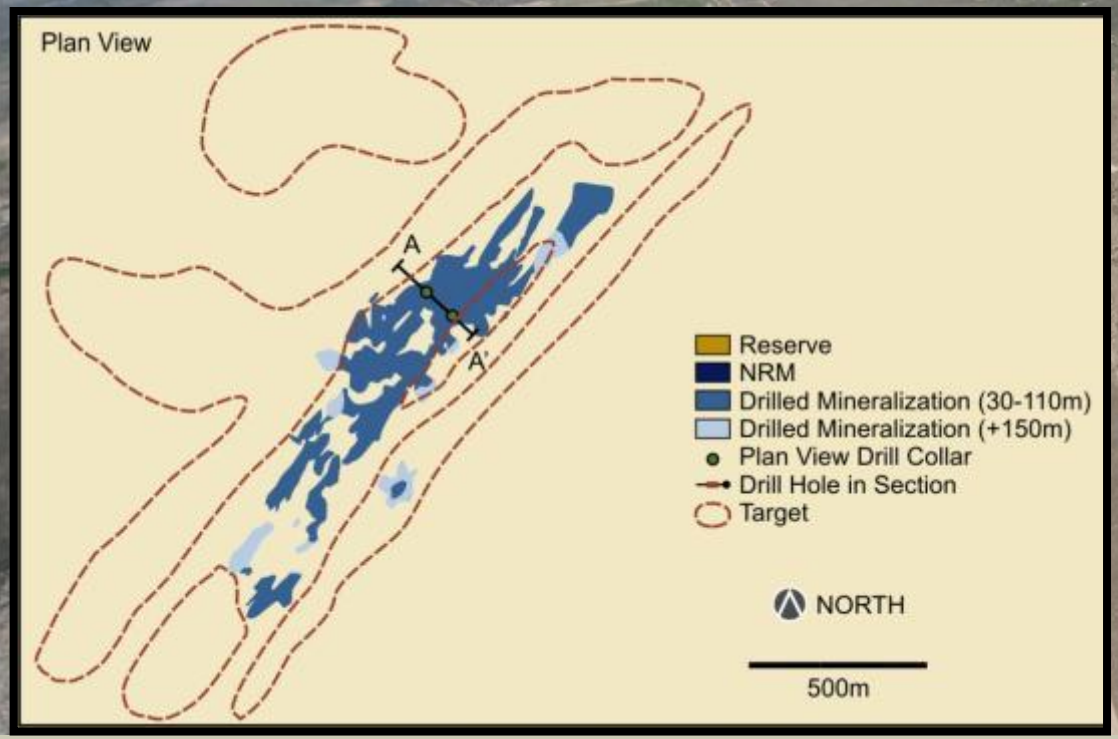

Long Canyon

Continuing Confidence in Original Investment Thesis

***Trend Potential of* >3-4X Fronteer's Stated Resource Estimate[20]**

(1.4Moz M&I + 0.8Moz Inferred; No ounces currently in reserves or NRM; Expected to declare first NRM in 2012)

Africa

Akyem – Start Date ~2014

Project Description

Akyem will contribute to nearly doubling our African production. Construction is ~50% complete, first concrete poured at crusher.

Profitable Growth

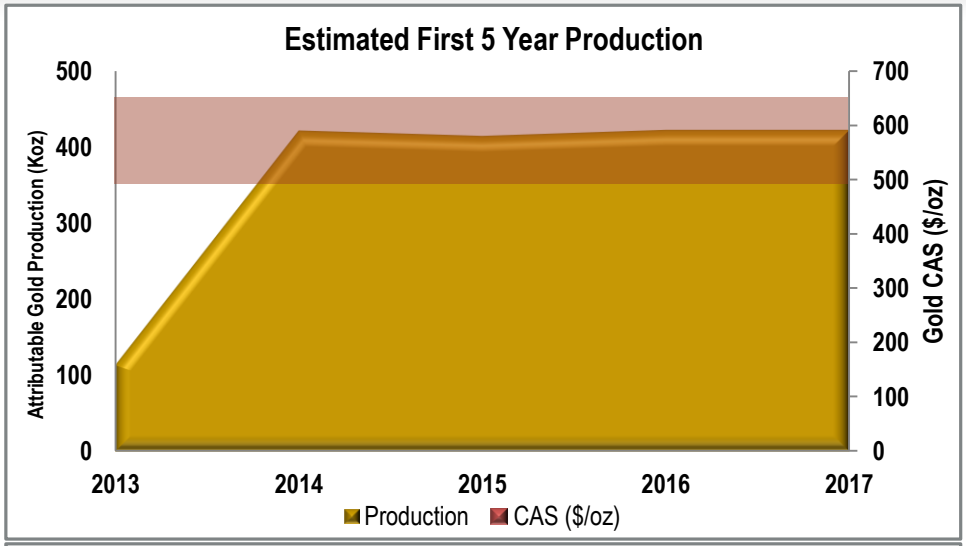

- Gold: ~350 – 450 koz/yr

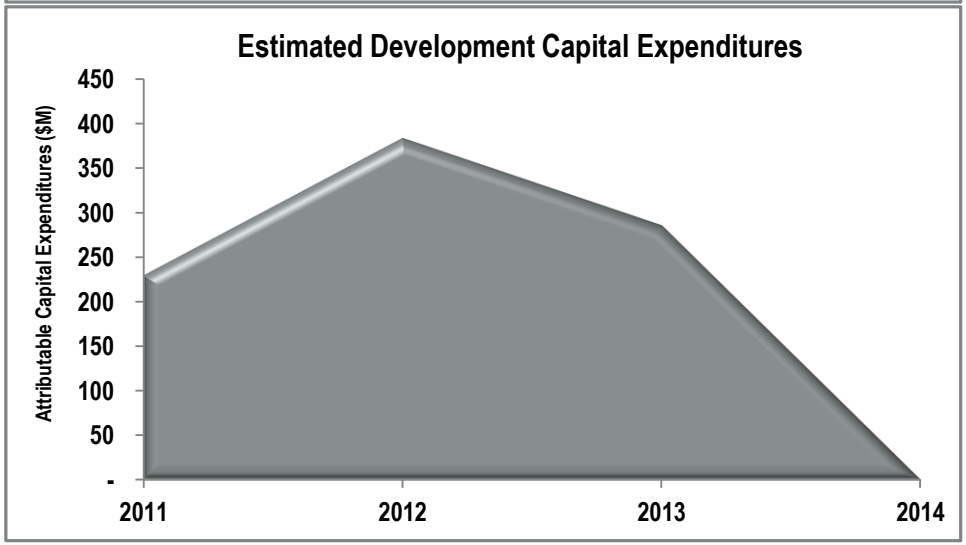

Disciplined Returns

- Capex: ~$850 – $1,100M
- Operating Costs: $500 – $650/oz

Gold Reserves & NRM

- 2011 Reserves: 7.4 Moz
- 2011 NRM: 0.3 Moz

Ball Mill and SAG Mill Construction at Akyem

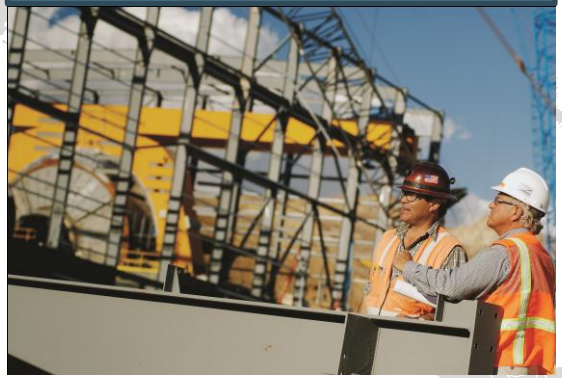

February 2012

Alternative Development Options

Increased Financial Flexibility

Profitable Growth & Disciplined Returns

North America

Lone Tree Autoclave Restart ~2014
Au Production Potential: ~60koz
Development Capital: ~$100M

Ahafo North ~2019
Au Production Potential: ~210koz
Development Capital: ~$550M

APAC

Jundee Extensions ~2014
Au Production Potential: ~60koz
Development Capital: ~$100M

Batu 3rd SAG ~2016
Cu Production Potential: ~60Mlb
Development Capital: ~$300M

Production potential reflects annual estimates

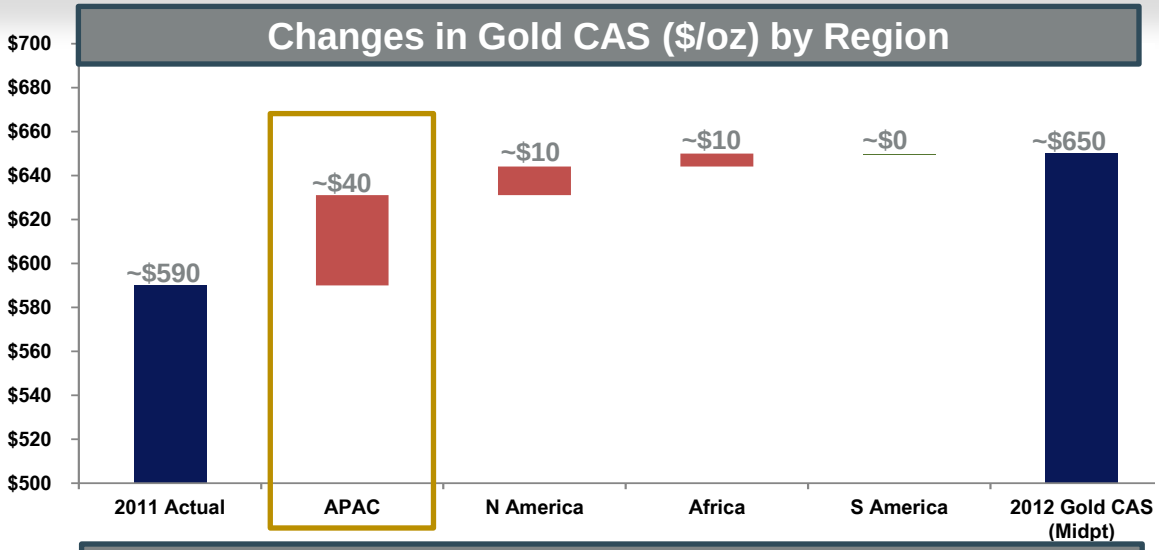

Appendix C

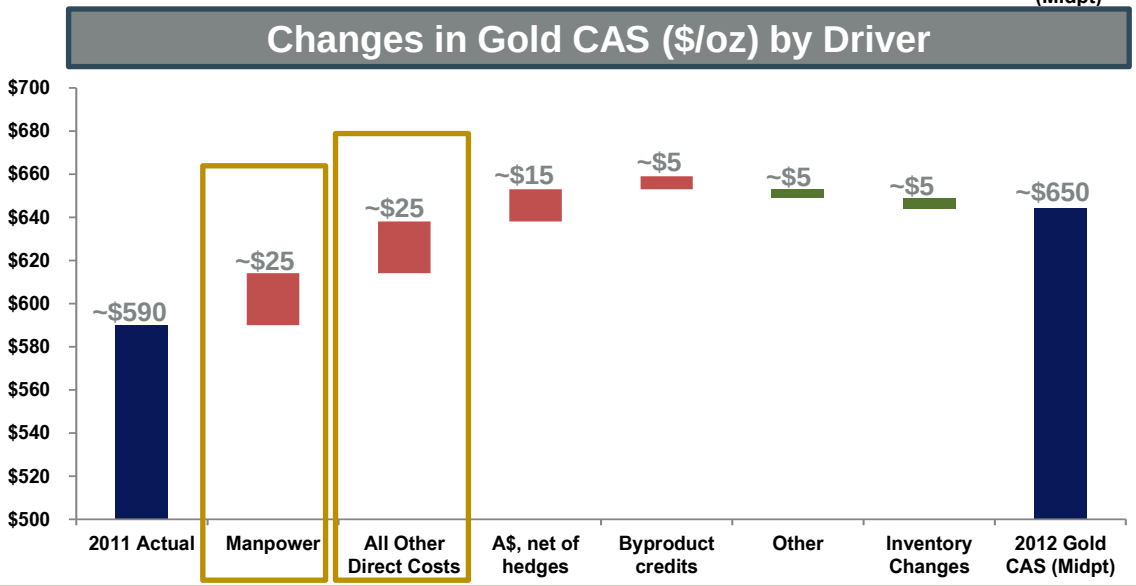

2011 v 2012 Gold CAS ($/oz)

Rising APAC, Labor and Consumables Costs are Key Drivers

- **APAC cost increase accounts for ~67% of total CAS increase**
  - **Average salary in Australian mining sector was ~$110K/yr in 2010[1]**
- **Australian carbon tax passed in November 2011**
  - **Polluters will pay ~$23/tonne of carbon released into atmosphere**

- **Labor crunch stemming from shortfall of mining professionals**
  - **Canada shortfall ~60K – 90K by 2017[2]**
  - **Peru shortfall ~40K by 2020[2]**
- **Commodity boom boosting input costs**
  - **Competition for parts, equipment driving prices**

Appendix D

Reconciliation – Adjusted Net Income to GAAP Net Income

Non-GAAP Financial Measures

Non-GAAP financial measures are intended to provide additional information only and do not have any standard meaning prescribed by Generally Accepted Accounting Principles ("GAAP"). These measures should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP.

Reconciliation of Adjusted Net Income to GAAP Net Income

Management uses the non-GAAP financial measure Adjusted net income to evaluate the Company's operating performance, and for planning and forecasting future business operations. The Company believes the use of Adjusted net income allows investors and analysts to compare the results of the continuing operations of the Company and its direct and indirect subsidiaries relating to the production and sale of minerals to similar operating results of other mining companies, by excluding exceptional or unusual items, income or loss from discontinued operations and the permanent impairment of assets, including marketable securities and goodwill. Management's determination of the components of Adjusted net income are evaluated periodically and based, in part, on a review of non-GAAP financial measures used by mining industry analysts.

Net income attributable to Newmont stockholders is reconciled to Adjusted net income as follows:

	Three months ended March 31,	
(in millions except per share, after-tax)	**2012**	**2011**
GAAP Net income (1)	**$ 490**	**$ 514**
Other impairments/asset sales	17	(1)
Loss from discontinued operations	71	-
Adjusted net income	**$ 578**	**$ 513**
Net income per share, basic	**$ 0.99**	**$ 1.04**
Adjusted net income per share, basic	**$ 1.17**	**$ 1.04**
Adjusted net income per share, diluted	**$ 1.15**	**$ 1.02**

(1) Attributable to Newmont stockholders.

Attributable and Net Attributable CAS

Costs Applicable to Sales per Ounce/Pound

Costs applicable to sales per ounce/pound are non-GAAP financial measures. These measures are calculated by dividing the costs applicable to sales of gold and copper by gold ounces or copper pounds sold, respectively. These measures are calculated on a consistent basis for the periods presented on both a consolidated and attributable to Newmont basis. Attributable costs applicable to sales are based on our economic interest in production from our mines. For operations where we hold less than a 100% economic share in the production, we exclude the share of gold or copper production attributable to the non-controlling interest. We include attributable costs applicable to sales per ounce/pound to provide management, investors and analysts with information with which to compare our performance to other gold producers. Costs applicable to sales per ounce/pound statistics are intended to provide additional information only and do not have any standardized meaning prescribed by GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. The measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP. Other companies may calculate these measures differently.

Net attributable costs applicable to sales per ounce measures the benefit of copper produced in conjunction with gold, as a credit against the cost of producing gold. A number of other gold producers present their costs net of the contribution from copper and other non-gold sales. We believe that including a measure of this basis provides management, investors and analysts with information with which to compare our performance to other gold producers, and to better assess the overall performance of our business. In addition, this measure provides information to enable investors and analysts to understand the importance of non-gold revenues to our cost structure.

	Gold		Copper	
	Three Months Ended,		Three Months Ended,	
	2012	2011	2012	2011
Costs applicable to sales:				
Consolidated	$ 902	$ 823	$ 115	$ 117

(1) Reserves are calculated at a a gold price of US$1,200, A$1,250, or NZ$1,600 per ounce unless otherwise noted. 2010 reserves were calculated at a gold price of US$950, A$1,100, or NZ$1,350 per ounce unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000 unless they are less than 50,000, and gold ounces have been rounded to the nearest 10,000.

(2) Includes reserves under development at the Emigrant deposits for combined total undeveloped reserves of 1.6 million ounces.

(3) Reserve estimates provided by Barrick, the operator of the Turquoise Ridge Joint Venture.

(4) In-process material is the material on leach pads at the end of each year from which gold remains to be recovered. In-process material reserves are reported separately where tonnage or contained ounces are greater than 5% of the total site-reported reserves and contained ounces are greater than 100,000.

(5) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpile reserves are reported separately where tonnage or contained ounces are greater than 5% of the total site-reported reserves and contained ounces are greater

(6) Project is under development.

(7) Reserves include the currently undeveloped deposit at La Quinua Sur, which contains reserves of 0.8 million attributable ounces.

(8) Reserves estimates were provided by Buenaventura, the operator of the La Zanja project.

(9) Percentage reflects Newmont's economic interest at December 31, 2011.

(10) Reserve estimates provided by Regis Resources Ltd, in which Newmont holds a 16.85% interest.

(11) Includes undeveloped reserves at Yamfo South, Yamfo Central, Techire West, Subenso South, Subenso North, Yamfo Northeast, and Susuan totaling 3.2 million ounces.

(12) Subika Underground project is under development.

(13) Project is under development.

(1) Mineralized material is reported exclusive of reserves.

(2) Mineralized Material calculated at a silver price of US$26.00, A$27.50, or NZ$34.50 per ounce unless otherwise noted. 2010 Mineralized material was calculated at a gold price of US$18.00, A$21.00, or NZ$25.50 per ounce. Tonnage amounts have been rounded to the nearest 100,000.

(3) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans.

(4) Percentage reflects Newmont's economic interest at December 31, 2011.

Non-Reserve Mineralization Definitions Supplemental Information (continued)

Defined terms and Statement Regarding Reserves and NRM:

Ian Douglas, Newmont's Group Executive of Reserves and Geostatistics, is the qualified person responsible for the preparation of the reserve and NRM estimates in this presentation. The reserves disclosed in this presentation have been prepared in compliance with Industry Guide 7 published by the SEC. Investors are encouraged to read the footnotes to the tables included on slides 36-41, as well as the definitions and cautionary statements included herein.

As used in this presentation, the term "reserve" means that part of a mineral deposit that can be economically and legally extracted or produced at the time of the reserve determination. The term "economically," as used in this definition, means that profitable extraction or production has been established or analytically demonstrated in a full feasibility study to be viable and justifiable under reasonable investment and market assumptions. The term "legally," as used in this definition, does not imply that all permits needed for mining and processing have been obtained or that other legal issues have been completely resolved. However, for a reserve to exist, Newmont must have a justifiable expectation, based on applicable laws and regulations, that issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with Newmont's current mine plans. Reserves in this presentation may be aggregated from the Proven and Probable classes.

As used in this presentation, the term "non-reserve mineralization" or "NRM" refers to Measured, Indicated and/or Inferred materials, which are exclusive of reserves. Newmont has determined that such NRM would be substantively the same as those prepared using the Guidelines established by the Society of Mining, Metallurgy and Exploration and defined as Resources. Estimates of NRM are subject to further exploration and development, are subject to additional risks, and no assurance can be given that they will eventually convert to future mineral reserves of the Company. In addition, our current or future reserves and exploration and development projects may not result in new mineral producing operations. Even if significant mineralization is discovered and converted to reserves, it will likely take many years from the initial phases of exploration to development and ultimately to production, during which time the economic feasibility of production may change.

Additionally, references to "attributable ounces," "attributable pounds" and "attributable mineralization" in this presentation are intended to mean that portion of gold or copper produced, sold or included in Proven and Probable reserves or NRM that is attributable to our ownership or economic interest.

For a description of the key assumptions, parameters and methods used to estimate mineral reserves and mineralized material, as well as a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, please see Newmont's most recent Annual Report on Form 10-K, filed on February 24, 2012, and other SEC filings.

Appendix E

Cautionary Statement Regarding 2012 Outlook

2012 Outlook projections contained in this presentation ("Outlook") are considered "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by such sections and other applicable laws. Outlook represents management's good faith estimates or expectations of future results as of February 24, 2012 and is based upon certain assumptions. Such assumptions, include, but are not limited to: (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company's projects being consistent with current expectations and mine plans; (iii) political developments in any jurisdiction in which the Company operates being consistent with its current expectations; (iv) certain exchange rate assumptions for the Australian dollar to the U.S. dollar, as well as other the exchange rates, being approximately consistent with current levels; (v) certain price assumptions for gold, copper and oil; (vi) prices for key supplies being approximately consistent with current levels; and (vii) the accuracy of our current mineral reserve and mineral resource estimates. However, Outlook is subject to risks, uncertainties and other factors, including that such assumptions may prove to be incorrect and other factor referred to on slide, which could cause actual results to differ materially from Outlook. Consequently, Outlook cannot be guaranteed. Investors are cautioned that the Company does not undertake to subsequently reaffirm, provide comfort or otherwise update Outlook to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events. Investors should not assume that any lack of update constitutes a current reaffirmation of Outlook. Continued reliance on Outlook after the date it is first issued is at investors' own risk.

[a] *The above 2012 capital expenditures outlook for the Conga project assumes development as initially anticipated by management when the Company announced its original 2012 outlook on January 17, 2012 and it is not being reaffirmed at this time. As previously disclosed, development of the Conga project was temporarily suspended in November, 2011 and future development remains subject to certain risks, including political and social unrest risks, and uncertainties, including those relating to the evaluation of the recommendations resulting from the Conga project EIA review. Accordingly, investors are cautioned not to place undue reliance on this future looking statement. The Company will reevaluate its capital expenditure outlook after the development schedule of Conga is more clearly defined. Should the Company be unable to continue with the current development plan at Conga, it may reprioritize and reallocate capital to development alternatives in Nevada, Australia, Ghana, and Indonesia.*

[b] *2012 Attributable CAS Outlook is $640 - $690 per ounce.*

[c] *2012 Net Attributable CAS Outlook (inclusive of by-product credits) is $600 - $650 per ounce.*

[d] *Includes capitalized interest of approximately $140 million.*

[e] *Assumes Batu Hijau economic interest of 44.5625% for 2012, subject to final divestiture obligations.*

Endnotes

Investors are encouraged to read the information contained in this presentation in conjunction with the following notes footnotes, the Cautionary Statement on slide 2 and the factors described under the "Risk Factors" section of the Company's most recent Form 10-K, filed with the SEC on February 24, 2012.

1. When used in this presentation, "profitable gold production potential" represents the sum for all projects of the current estimated average annual production targets for the first five years of production for each such project anticipated to be commissioned between 2012 and 2017. Additionally, unless otherwise indicated, references to potential production used in this presentation mean that portion that is attributable to Newmont's ownership or economic interest.
2. Estimated mineralization "potential" and "exploration upside" refer to mineralization that is additional to current Reserves and Non-Reserve Mineralization ("NRM"). Drill results and estimates of drilled mineralization and pre-NRM are not necessarily indicative of future drill results, NRM, Reserves, or production. Conversion of such mineralization to Reserves or NRM is subject to substantive risks inherent in the mining industry, and no assurance can be given that such inventory will be converted to Reserves or NRM or of the timing or terms of any such conversion. Even if significant mineralization is discovered and converted to Reserves or NRM, it will likely take many years from the initial phases of exploration to development and to production, during which time the economic feasibility of production may change. As a result, there is greater uncertainty of the conversion of such inventory to production than in the case of Reserves or NRM. For additional information on Newmont's Reserves and NRM, see our Year-End Reserve Report (as of 12/31/11) available at www.newmont.com/our-investors/reserves-and-resources. For a description of the key assumptions, parameters and methods used to estimate mineral reserves, as well as a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, please see Newmont's most recent Annual Report on Form 10-K, filed on February 24, 2012, and other SEC filings.
3. The figures shown in the 2012 bar chart are the median of 2012 Outlook projections. 2012 Outlook projections used in this presentation ("Outlook") are considered "forward-looking statements" and represents management's good faith estimates or expectations of future production results as of February 24, 2012 and is based upon certain assumptions. Such assumptions, include gold price of $1,500/ounce, copper price of $3.50/pound, oil price of $90/barrel and Australian dollar exchange rate of 1.00. Consequently, Outlook cannot be guaranteed. Investors are cautioned that the Company does not undertake to subsequently reaffirm, provide comfort or otherwise update Outlook to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events. Investors should not assume that any lack of update constitutes a current reaffirmation of Outlook.
4. When used in this presentation, the phrase "production potential" represents the sum for all projects of the current estimated average annual production targets for 2017 for each such project anticipated to be commissioned by 2017. Additionally, unless otherwise indicated, references to potential production used in this presentation mean that portion that is attributable to Newmont's ownership or economic interest. Such estimates are subject to change based upon risks, future events and potential modifications to the business plan as indicated on slide 2. Newmont currently forecasts 2017 attributable gold and copper production of approximately 6-7Moz and 400 Mlbs, respectively.
5. 2012 Outlook projections used in this presentation ("Outlook") are considered "forward-looking statements" and represents management's good faith estimates or expectations of future production results as of February 24, 2012 and does not constitute a current reaffirmation. The 2012 Outlook is based upon certain assumptions, including a gold price of $1,500/ounce, copper price of $3.50/pound, oil price of $90/barrel and Australian dollar exchange rate of 1.00. Consequently, Outlook cannot be guaranteed. Investors are cautioned that the Company does not undertake to subsequently reaffirm, provide comfort or otherwise update Outlook to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events. Investors should not assume that any lack of update constitutes a current reaffirmation of Outlook.
6. "2017 Potential" figures are indicative of production and attributable development capital requirements of commissioned projects between 2012 and 2017 to reach gold production potential of 6-7Moz by 2017. The range for production is based on the point-in-time sum of all projects' production in 2017. The figures shown are incremental to Newmont's current base plan of operations.
7. The future development of the Conga project remains subject to risks and uncertainties as disclosed in the Cautionary Statement on page 2. Development of the Conga project has been temporarily suspended as disclosed on November 30, 2011. Should the Company be unable to continue with the current development plan at Conga, Newmont may in the future reprioritize and reallocate capital to development alternatives in Nevada, Australia, Ghana, and Indonesia.
8. When used in this presentation, the phrase "production potential" represents the sum for all projects of the current estimated average annual production targets for 2017 for each such project anticipated to be commissioned by 2017. Additionally, unless otherwise indicated, references to potential production used in this presentation mean that portion that is attributable to Newmont's ownership or economic interest. Such estimates are subject to change based upon risks, future events and potential modifications to the business plan as indicated on slide 2. Newmont currently forecasts 2017 attributable gold and copper production of approximately 6-7Moz and 400 Mlbs, respectively.
9. Cash flow growth should be considered a forward looking-statement. For purposes of the graphic, operating cash flow (OCF) per ounce on a consolidated basis determined by dividing 2011 consolidated OCF of $3.6B by 5.9 Moz consolidated production to get $610/oz at realized gold price of $1,562. Margin is pro-rated across $1,500 and $1,700 gold prices while holding implied $952/oz total cost basis constant.
10. Cash and Cash Equivalents as of March 30, 2012.
11. Investments as of March 30, 2012.
12. Credit facility availability as of May 15, 2012. $500 million of the total available $3.0B credit facility is utilized for letters of credit. Newmont has the capacity to transfer the letters of credit and utilize the $3.0B in its entirety.
13. Total debt to capitalization as of March 30, 2012.
14. Debt to EBITDA is a twelve-trailing month average as of May 15, 2012 sourced from Bloomberg.
15. Figures shown are the long-term corporate debt principal amounts due at payout.
16. Newmont has established a gold price-linked dividend policy that serves as a non-binding guideline for Newmont's Board of Directors (the "Board"). The Board reserves all powers related to the declaration and payment of dividends. In addition, the declaration and payment of future dividends remain at the discretion of the Board and will be determined based on Newmont's financial results, cash and liquidity requirements, future prospects and other factors deemed relevant by the Board. In determining the dividend to be declared and paid on the common stock of the Company, the Board may revise or terminate such policy at any time without prior notice.
17. Figures shown for projects are on an attributable basis.
18. The future development of the Conga project remains subject to risks and uncertainties as disclosed on page 2 – "Cautionary Statement." Development of the Conga project has been temporarily suspended as disclosed on November 30, 2011. Should the Company be unable to continue with the current development plan at Conga, Newmont may in the future reprioritize and reallocate capital to development alternatives in Nevada, Australia, Ghana, and Indonesia. See the Company's related news release dated 11/30/11 and the Cautionary Statement on slide 2 of this presentation.
19. No ounces from Long Canyon currently in reserves or NRM.
20. In January 2011, Fronteer Gold released an interim resource estimate for Long Canyon, which reported Measured and Indicated resources of approximately 0.071 and 1.324 million gold ounces, respectively, and an additional Inferred resource of approximately 0.8 million gold ounces. U.S. investors are cautioned that Fronteer Gold provided its public disclosures at the time of acquisition in the terms of "Measured resources", "Indicated resources" and "Inferred resource." While these terms are recognized and required by Canadian regulations, these terms are not defined terms under the SEC's Industry Guide 7. U.S. Investors are cautioned not to assume that any part or all of mineral deposits in the "Measured resources" and "Indicated resources" categories will ever be converted into Reserves. Additionally, "Inferred resources" have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of Inferred resources may not form the basis of a feasibility study or prefeasibility studies, except in rare cases. Accordingly, U.S. Investors are cautioned not to assume that any part or all of an Inferred resource exists or is economically or legally minable. No ounces are currently in the Company's Reserves or NRM for Long Canyon. Additionally, drill results illustrated on slide 32 are not necessarily indicative of future drill results, NRM, Reserves or production.
