Fourth Quarter and 2011 Earnings and Exploration Update

Friday, February 24, 2012

Cautionary Statement

Cautionary Statement Regarding Forward Looking Statements, Including 2012 Outlook:

This presentation contains "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by those sections and other applicable laws. Those forward-looking statements include (without limitation) estimates and expectations of, and statements regarding: (i) the Company's strategy and plans; (ii) future equity gold and equity copper production; (iii) future operating, sales and other costs; (iv) future capital expenditures; (v) project returns; (vi) project start dates, ramp up, life, pipeline timelines, including commencement of mining, drilling and stage gate advancement and expansion opportunities; (vii) potential ounces or tons of reserves, NRM and potential resources; (viii) exploration pipeline, potential or upside, opportunities, growth and growth potential; (ix) dividend payments and increases; (x) future liquidity, cash and balance sheet expectations; and (xi) other financial outlook indicators relation to the Company's operations and projects. Those forward-looking statements include (without limitation) statements that use forward-looking terminology such as "may", "will", "expect", "predict", "anticipate", "believe", "continue", "potential", "target", "goal", "opportunity", "outlook", or the negative or other variations of those terms or comparable terminology. Estimates or expectations of future events or results are based upon certain assumptions, which may prove to be incorrect. Those assumptions include (without limitation): (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company's projects being consistent with current expectations and mine plans; (iii) political, social and legal developments in any jurisdiction in which the Company conducts business being consistent with its current expectations; (iv) certain exchange rate assumptions for the Australian dollar to the U.S. dollar, as well as the other exchange rates being approximately consistent with current levels; (v) certain price assumptions for gold, copper and oil; (vi) prices for key supplies being approximately consistent with current levels and such supplies otherwise being available on bases consistent with the Company's current expectations; and (vii) the accuracy of our current mineral reserve and mineral resource estimates and exploration information. Where the Company expresses or implies an expectation or belief as to future events or results, that expectation or belief is expressed in good faith and is believed to have a reasonable basis. However, forward-looking statements are subject to risks, uncertainties and other factors that could cause actual results to differ materially from future results expressed, projected or implied by the "forward-looking statements". Those risks, uncertainties and other factors include (without limitation): (i) gold and other metals price volatility; (ii) currency fluctuations; (iii) increased capital and operating costs, and scarcity of and competition for required labor and supplies; (iv) variances in oregrade or recovery rates from those assumed in mining plans; (v) operating or technical difficulties; (vi) political and operational risks; (vii) community relations, conflict resolution and outcome of projects or oppositions; and (viii) governmental regulation and judicial outcomes. For a more detailed discussion of such risks and other factors, see the Company's 2011 Annual Report on Form 10-K, filed on February 24, 2012, with the Securities and Exchange Commission ("SEC"), as well as the Company's other SEC filings. These forward-looking statements are not guarantees of future performance, given that they involve risks and uncertainties. The Company does not undertake any obligation to release publicly revisions to any forward-looking statement except as may be required under applicable securities laws. Investors should not assume that any lack of update to a previously issued forward-looking statement constitutes a reaffirmation of that statement. Continued reliance on forward-looking statements is at investors' own risk. In addition, some of the statements in this presentation are based on assumptions or methodologies (such as commodity prices) or subject to cautionary statements that are discussed in the notes found at the end of this presentation.

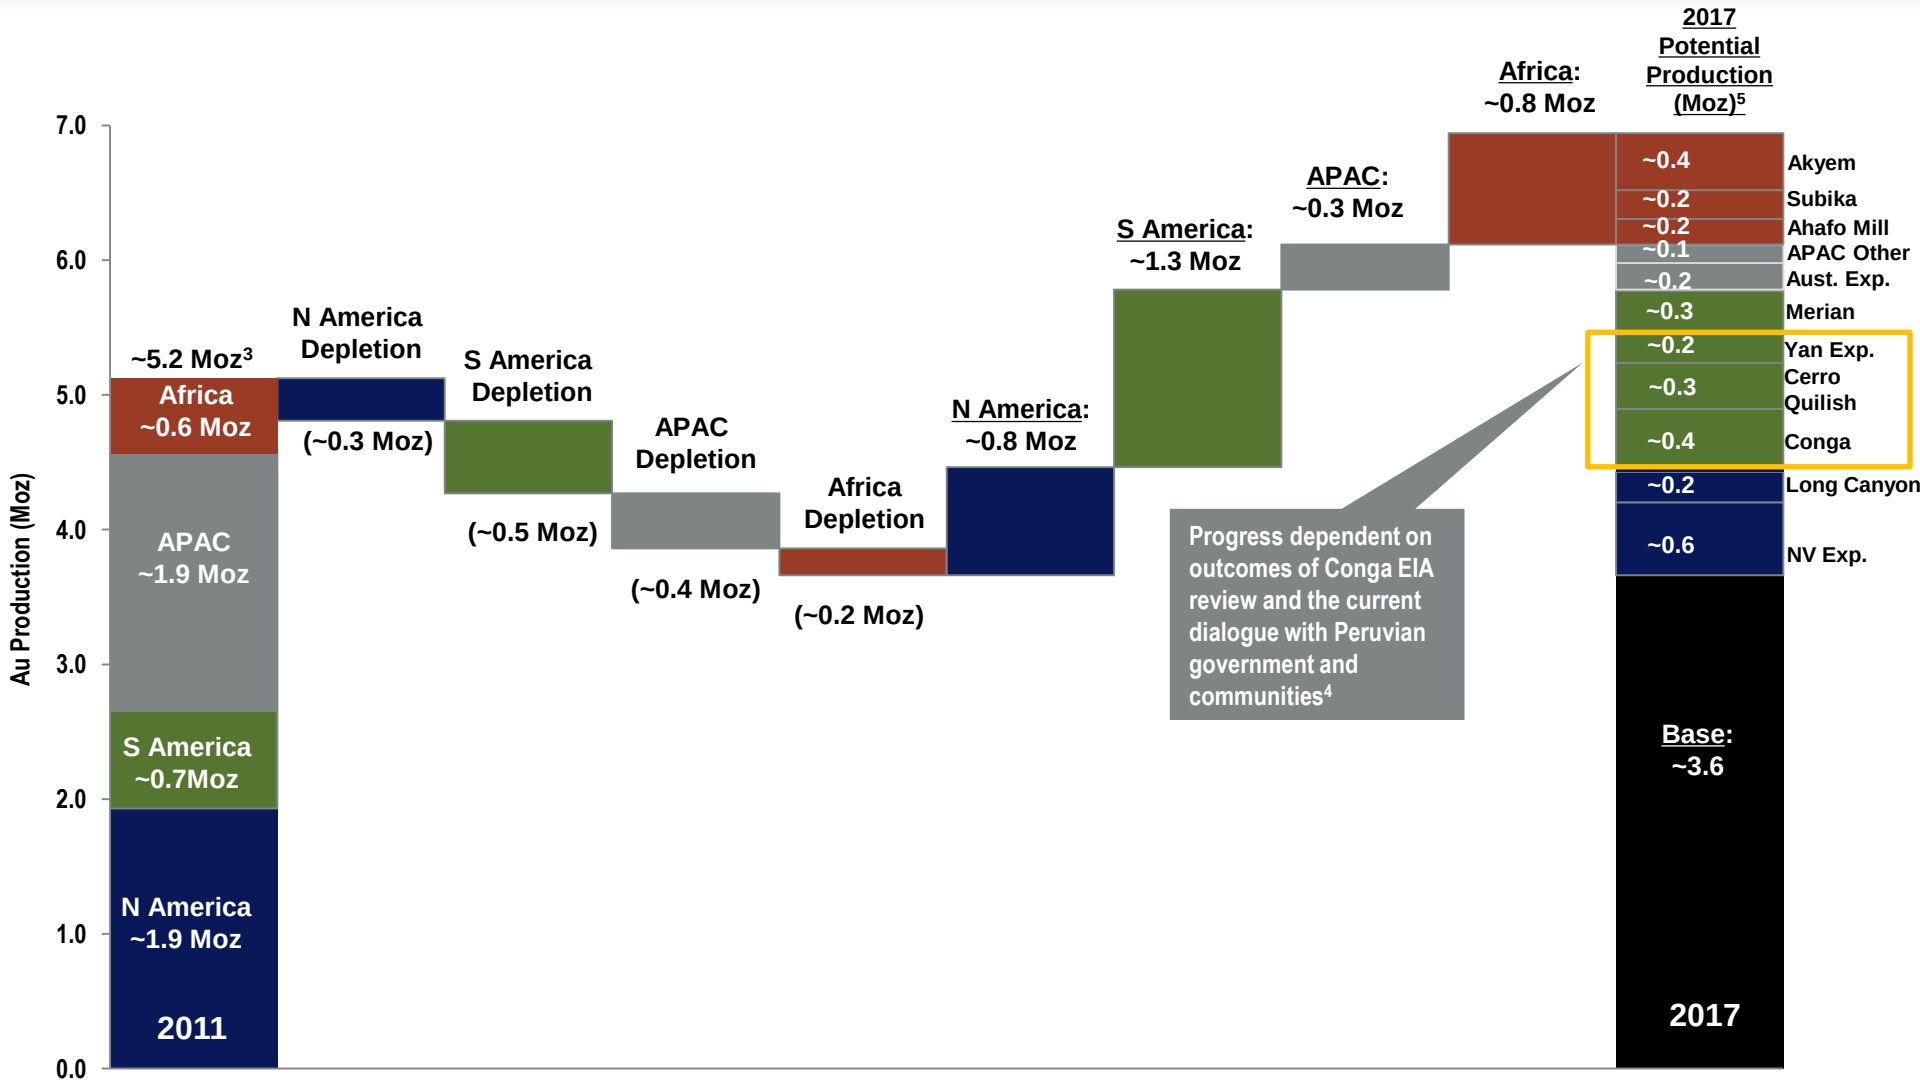

Building on Strong Operating Performance

Newmont Offers a Compelling Combination of Growth, Returns and Exploration Upside

	Attributable Basis
Production Growth	• Gold production growth potential to ~7 Moz by 2017 (~35%)[1] • Copper production to potentially double over same period
Project Returns	• Competitive returns across the pipeline
Exploration Upside	• Potential to add equivalent of 90 Moz Au and 9 Blbs over the next decade[2]
Balance Sheet Strength	• Access to capital with an investment grade balance sheet and strong operating cash flows to support growth
Gold Price-Linked Dividend	• Industry leading dividend tied to the gold price

Growth Potential

2012-2017 Projected Pipeline Growth, Net of Depletion

Q4 and FY 2011 Financial Highlights

2011	**$594**

Q4 Attributable Gold Production (Koz)

Phoenix Mill

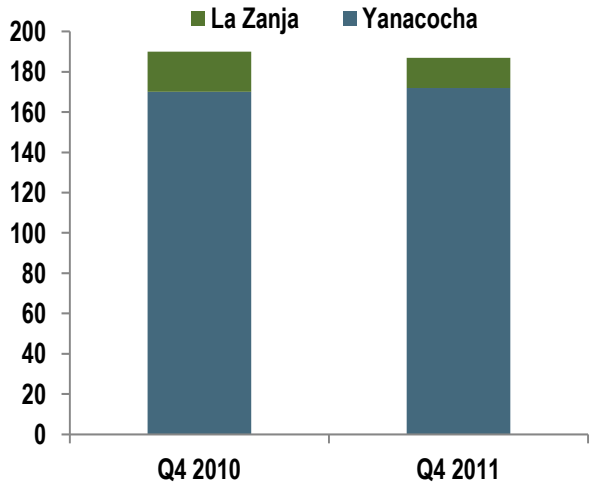

- 2011 gold production higher due to the commencement of underground mining at Exodus and Pete Bajo and higher Gold Quarry production, partially offset by lower production from Chukar
- 2011 gold CAS higher due to higher surface mining and milling costs and higher royalties, partially offset by higher silver by-product credits

South America Operating Highlights

Attributable Production (Koz)	
2010	751
2011	**728**
Consolidated CAS ($/oz)	
2010	$431
2011	**$560**

Q4 Attributable Gold Production (Koz)

Yanacocha, Peru

- 2011 gold production lower at Yanacocha due to lower leach placement, partially offset by higher grades and recoveries
- 2011 gold CAS higher due to lower production, higher mining costs and lower silver by-product credits

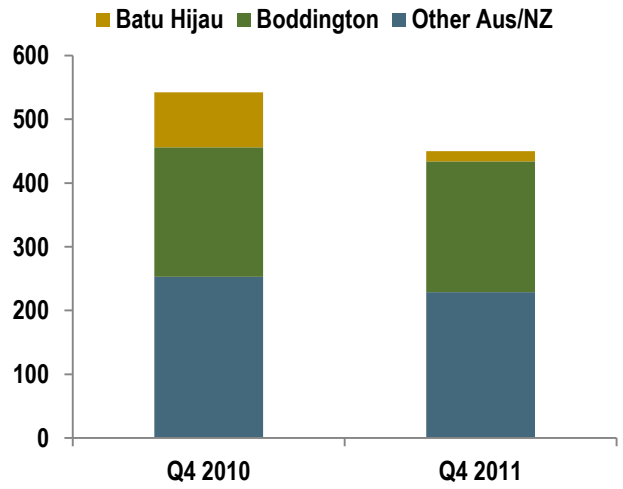

Asia Pacific Operating Highlights

	Attributable Gold Production (Koz)	Consolidated Gold CAS ($/oz)
2010	2,167	$474
2011	**1,938**	**$639**

	Attributable Copper Production (Mlb)	Consolidated Copper CAS ($/lb)
2010	327	$0.80
2011	**206**	**$1.26**

- 2011 gold production lower due to stripping at Batu Hijau and lower throughput at Tanami and Waihi, partially offset by higher mill throughput
- 2011 gold CAS higher due to lower production, higher waste mining and higher labor costs, partially offset by silver by-product credits at Boddington

Q4 Attributable Gold Production (Koz)

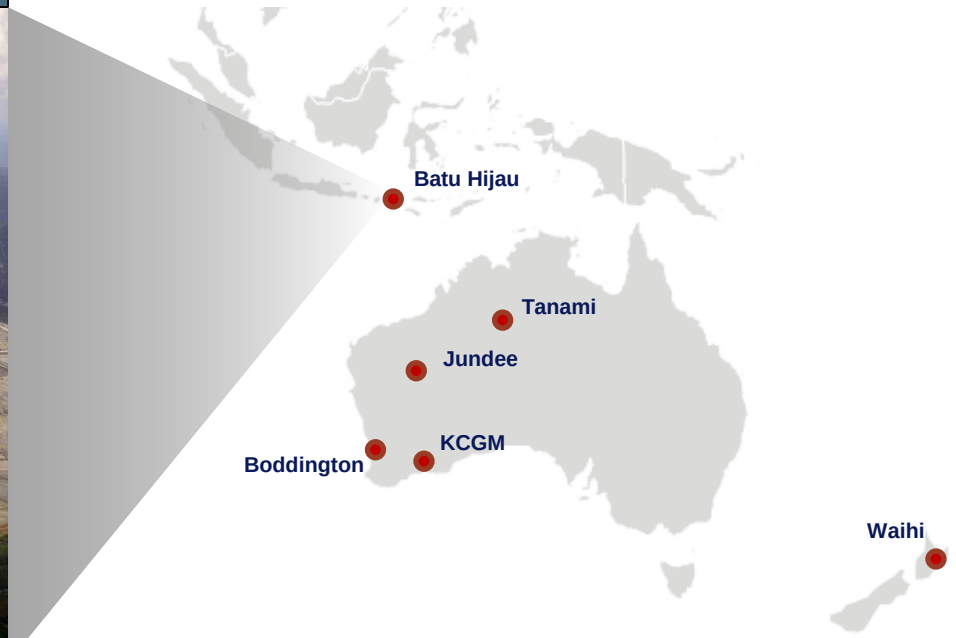

Q4 Attributable Copper Production (Mlb)

Batu Hijau Update

Batu Hijau

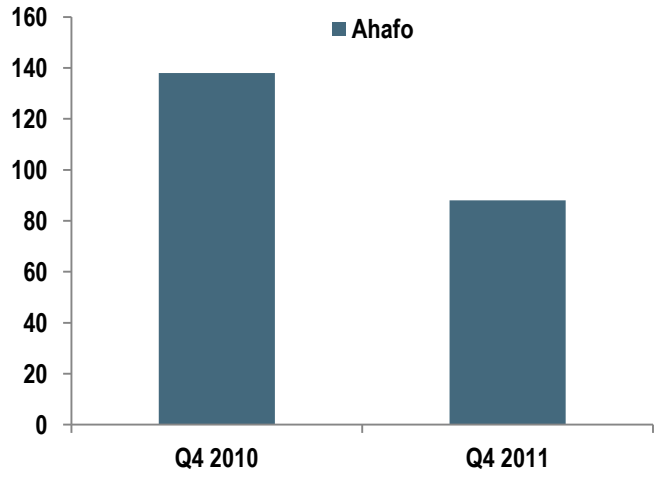

Batu Hijau 2012 Outlook Attributable Production	
Copper (Mlbs)	80 - 90
Gold (koz)	45 - 55
Batu Hijau Consolidated CAS	
Copper ($/lb)	$1.80 - $2.20
Gold ($/oz)	$800 - $850

- Phase 6 stripping campaign underway
- Stripping will continue through 2013

Africa Operating Highlights

Attributable Production (Koz)	
2010	545
2011	**566**
Consolidated CAS ($/oz)	
2010	$450
2011	**$474**

Q4 Attributable Gold Production (Koz)

Ahafo Mill

- 2011 gold production higher due to higher mill throughput and recovery and a full year of production at Amoma
- 2011 gold CAS higher due to higher labor, commodity and royalty costs, partially offset by higher production
- Fourth quarter production decreased due to lower mill grade and increase in inventory

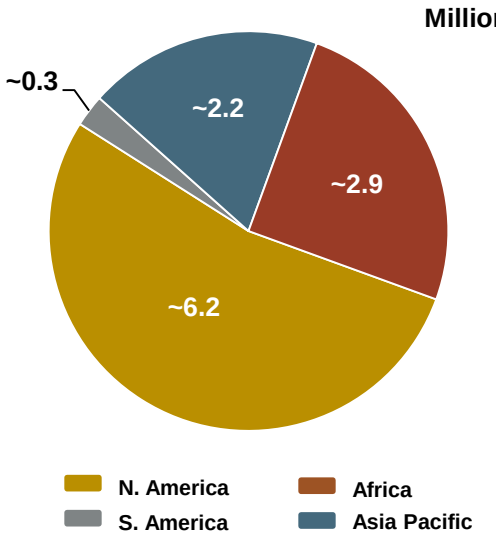

Exploration Upside

Gold Reserves Increase to Record Levels

2011 Attributable Gold Proven and Probable Reserves

2011 Attributable Gold Proven and Probable Reserve Additions by Region

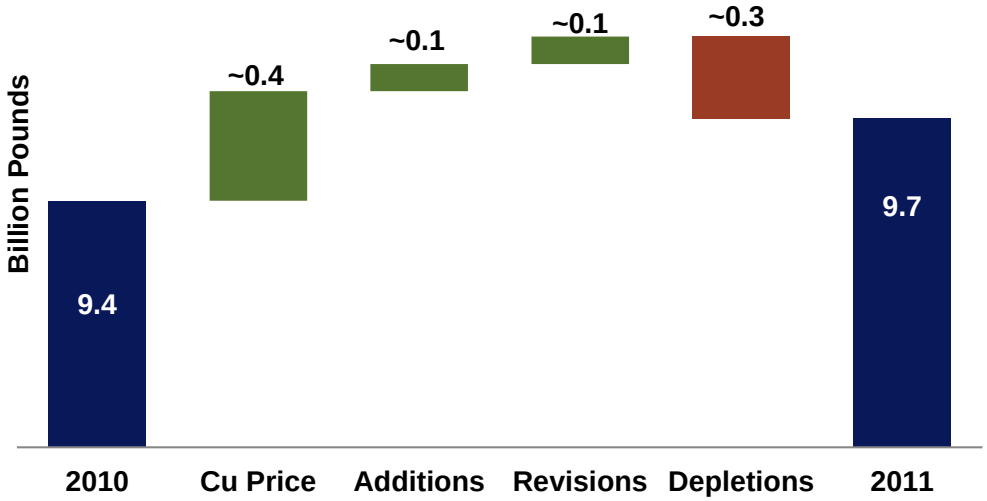

- Record gold reserves of 98.8 million ounces, an increase of ~6% from 2010
- Total gold NRM increased ~12% over 2010
- Biggest gold reserve increases came from North America (Carlin, Phoenix, and Turf/Leeville) and Africa (Ahafo open pits)

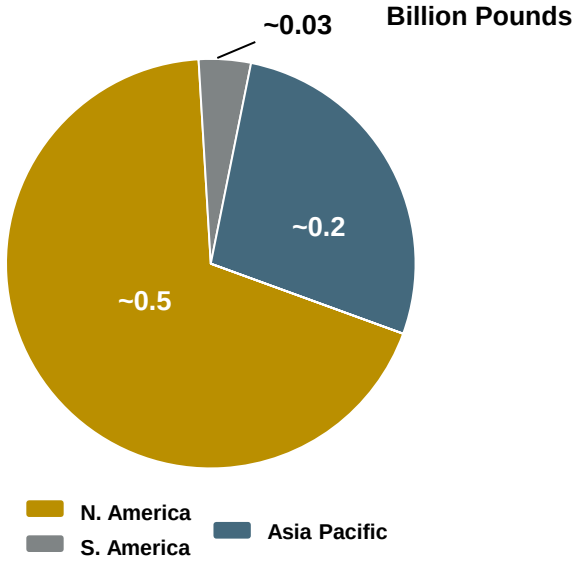

Exploration Upside

Copper Reserves Increase to Record Levels

2011 Attributable Copper Proven and Probable Reserves

2011 Attributable Copper Proven and Probable Reserve Additions by Region

- Record copper reserves of 9.7 billion pounds, an increase of ~3% from 2010
- Total copper NRM increased ~11% over 2010
- Copper reserve growth driven by increases at Phoenix and Batu Hijau

Exploration Upside
Long Canyon

Project Description

A Carlin-Type trend with potential for significant development and operating synergies

2011 Outcomes

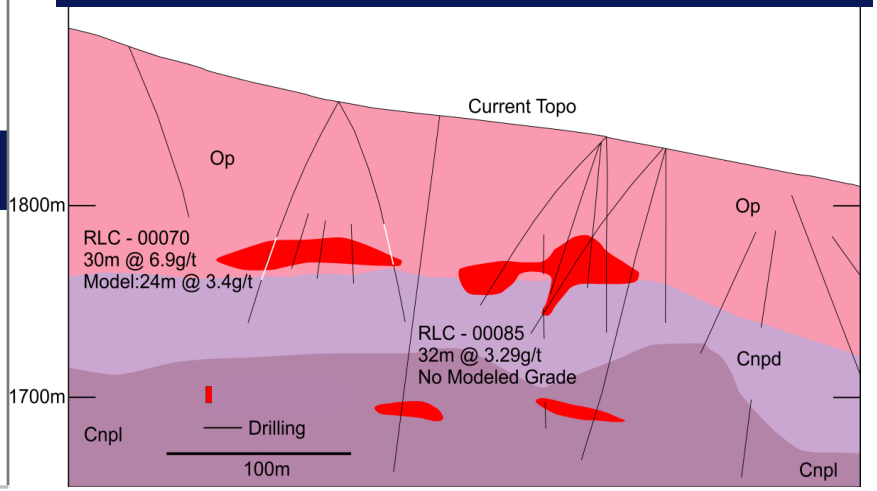

- Completed 278 drill holes; ~59 km
- Infill drilling extended mineralization by ~25%
- Step out drilling extended mineralization North and South
- Potentially new mineralized structures

2012 Program

- ~70km of infill, extension and district exploration drilling
- Expect to declare first NRM by year-end

Encouraging Results from Infill Drilling Program

Project Plan Progressing[12]

Tangible Steps in Advancing the Project Portfolio

Akyem

- Average annual production (1st 5 years): ~350 - 450 Koz gold; initial production expected ~2014
- Engineering essentially complete
- Civil and concrete works well advanced
- First structural steel erected

Conga

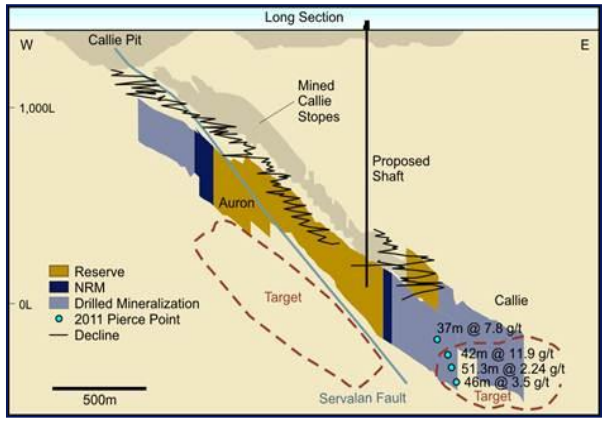

- Potential annual production (1st 5 years): ~300 - 350Moz gold; 80 -120Mlbs copper
- Engineering ~85% complete
- All major equipment purchased
- Construction activities remain suspended

Tanami Shaft

- Average annual production (1st 5 years): ~60 - 90 Koz gold; total annual production: ~340 - 400 Koz gold; initial production expected ~2015
- Detailed engineering in process
- Shaft pilot hole underway

Building on Strong Operating Performance

[d] *Includes capitalized interest of approximately $140 million.*

[e] *Assumes Batu Hijau economic interest of 44.5625% for 2012, subject to final divestiture obligations.*

Reconciliation – Adjusted Net Income to GAAP Net Income

Non-GAAP Financial Measures

Non-GAAP financial measures are intended to provide additional information only and do not have any standard meaning prescribed by Generally Accepted Accounting Principles ("GAAP"). These measures should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP.

Reconciliation of Adjusted Net Income to GAAP Net Income

Management uses the non-GAAP financial measure Adjusted net income to evaluate the Company's operating performance, and for planning and forecasting future business operations. The Company believes the use of Adjusted net income allows investors and analysts to compare the results of the continuing operations of the Company and its direct and indirect subsidiaries relating to the production and sale of minerals to similar operating results of other mining companies, by excluding exceptional or unusual items, income or loss from discontinued operations and the permanent impairment of assets, including marketable securities and goodwill. Management's determination of the components of Adjusted net income are evaluated periodically and based, in part, on a review of non-GAAP financial measures used by mining industry analysts.

Net income attributable to Newmont stockholders is reconciled to Adjusted net income as follows:

	Three months ended December 31,		Years ended December 31,

Attributable and Net Attributable CAS - Annual

Costs Applicable to Sales per Ounce/Pound

Costs applicable to sales per ounce/pound are non-GAAP financial measures. These measures are calculated by dividing the costs applicable to sales of gold and copper by gold ounces or copper pounds sold, respectively. These measures are calculated on a consistent basis for the periods presented on both a consolidated and attributable to Newmont basis. Attributable costs applicable to sales are based on our economic interest in production from our mines. For operations where we hold less than a 100% economic share in the production, we exclude the share of gold or copper production attributable to the non-controlling interest. We include attributable costs applicable to sales per ounce/pound to provide management, investors and analysts with information with which to compare our performance to other gold producers. Costs applicable to sales per ounce/pound statistics are intended to provide additional information only and do not have any standardized meaning prescribed by GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. The measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP. Other companies may calculate these measures differently.

Net attributable costs applicable to sales per ounce measures the benefit of copper produced in conjunction with gold, as a credit against the cost of producing gold. A number of other gold producers present their costs net of the contribution from copper and other non-gold sales. We believe that including a measure of this basis provides management, investors and analysts with information with which to compare our performance to other gold producers, and to better assess the overall performance of our business. In addition, this measure provides information to enable investors and analysts to understand the importance of non-gold revenues to our cost structure.

(1) Reserves are calculated at a a gold price of US$1,200, A$1,250, or NZ$1,600 per ounce unless otherwise noted. 2010 reserves were calculated at a gold price of US$950, A$1,100, or NZ$1,350 per ounce unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000 unless they are less than 50,000, and gold ounces have been rounded to the

(2) Includes reserves under development at the Emigrant deposits for combined total undeveloped reserves of 1.6 million ounces.

(3) Reserve estimates provided by Barrick, the operator of the Turquoise Ridge Joint Venture.

(4) In-process material is the material on leach pads at the end of each year from which gold remains to be recovered. In-process material reserves are reported separately where tonnage or contained ounces are greater than 5% of the total site-reported reserves and contained ounces are greater than 100,000.

(5) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans. Stockpile reserves are reported separately where tonnage or contained ounces are greater than 5% of the total site-reported reserves and contained ounces are greater

(6) Project is under development.

(7) Reserves include the currently undeveloped deposit at La Quinua Sur, which contains reserves of 0.8 million attributable ounces.

(8) Reserves estimates were provided by Buenaventura, the operator of the La Zanja project.

(9) Percentage reflects Newmont's economic interest at December 31, 2011.

(10) Reserve estimates provided by Regis Resources Ltd, in which Newmont holds a 16.85% interest.

(11) Includes undeveloped reserves at Yamfo South, Yamfo Central, Techire West, Subenso South, Subenso North, Yamfo Northeast, and Susuan totaling 3.2 million ounces.

(12) Subika Underground project is under development.

(13) Project is under development.

(1) Mineralized material is reported exclusive of reserves.

(2) Mineralized Material calculated at a gold price of US$1,400, A$1,475, or NZ$1,850 per ounce unless otherwise noted. 2010 Mineralized material was calculated at a gold price of US$1150, A$1,350, or NZ$1,600 per ounce. Tonnage amounts have been rounded to the nearest 100,000.

(3) Mineralized material estimates were provided by Barrick, the operator of the Turquoise Ridge Joint Venture.

(4) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans.

(5) Mineralized material estimates were provided by Buenaventura, the operator of the La Zanja Project.

(6) Percentage reflects Newmont's economic interest at December 31, 2011.

(7) Mineralized material estimates provided by Regis Resources Ltd, in which Newmont holds a 16.85% interest.

Non-Reserve Mineralization Definitions Supplemental Information (continued)

Defined terms and Statement Regarding Reserves and NRM:

Ian Douglas, Newmont's Group Executive of Reserves and Geostatistics, is the qualified person responsible for the preparation of the reserve and NRM estimates in this presentation. The reserves disclosed in this presentation have been prepared in compliance with Industry Guide 7 published by the SEC. Investors are encouraged to read the footnotes to the tables included on slides 28-33, as well as the definitions and cautionary statements included herein.

As used in this presentation, the term "reserve" means that part of a mineral deposit that can be economically and legally extracted or produced at the time of the reserve determination. The term "economically," as used in this definition, means that profitable extraction or production has been established or analytically demonstrated in a full feasibility study to be viable and justifiable under reasonable investment and market assumptions. The term "legally," as used in this definition, does not imply that all permits needed for mining and processing have been obtained or that other legal issues have been completely resolved. However, for a reserve to exist, Newmont must have a justifiable expectation, based on applicable laws and regulations, that issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with Newmont's current mine plans. Reserves in this presentation may be aggregated from the Proven and Probable classes.

As used in this presentation, the term "non-reserve mineralization" or "NRM" refers to Measured, Indicated and/or Inferred materials, which are exclusive of reserves. Newmont has determined that such NRM would be substantively the same as those prepared using the Guidelines established by the Society of Mining, Metallurgy and Exploration and defined as Resources. Estimates of NRM are subject to further exploration and development, are subject to additional risks, and no assurance can be given that they will eventually convert to future mineral reserves of the Company. In addition, our current or future reserves and exploration and development projects may not result in new mineral producing operations. Even if significant mineralization is discovered and converted to reserves, it will likely take many years from the initial phases of exploration to development and ultimately to production, during which time the economic feasibility of production may change.

Additionally, references to "attributable ounces," "attributable pounds" and "attributable mineralization" in this presentation are intended to mean that portion of gold or copper produced, sold or included in Proven and Probable reserves or NRM that is attributable to our ownership or economic interest.

For a description of the key assumptions, parameters and methods used to estimate mineral reserves and mineralized material, as well as a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, please see Newmont's most recent Annual Report on Form 10-K, filed on February 24, 2012, and other SEC filings.

Increased Gold Price-Linked Dividend[11]

Indicative Payout Table

Endnotes

Investors are encouraged to read the information contained in this presentation in conjunction with the following notes footnotes, the Cautionary Statement on slide 2 and the factors described under the "Risk Factors" section of the Company's most recent Form 10-K, filed with the SEC on February 24, 2012.

1. When used in this presentation, the phrase "potential production" represents the sum for all projects of the current estimated average annual production targets for 2017 for each such project anticipated to be commissioned by 2017. Additionally, unless otherwise indicated, references to potential production used in this presentation mean that portion that is attributable to Newmont's ownership or economic interest. Such estimates are subject to change based upon risks, future events and potential modifications to the business plan as indicated on slide 2. Newmont currently forecasts 2017 attributable gold and copper production of approximately 7Moz and 400 Mlbs, respectively.
2. Estimated reserve "potential" and "exploration upside" refer to mineralization that are additional to current Reserves and Non-Reserve Mineralization. Estimates of such mineralization are provided on an "order of magnitude" basis for informational purposes only. Conversion of such mineralization to Reserves is subject to substantive risks inherent in the mining industry, and no assurance can be given that such inventory will be converted to Reserves or of the timing or terms of any such conversion. Even if significant mineralization is discovered and converted to Reserves, it will likely take many years from the initial phases of exploration to development and to production, during which time the economic feasibility of production may change. As a result, there is greater uncertainty of the conversion of such inventory to production than in the case of Reserves or NRM. For additional information on Newmont's Reserves and NRM, see our Year-End Reserve Report (as of 12/31/11) available at www.newmont.com/our-investors/reserves-and-resources. For a description of the key assumptions, parameters and methods used to estimate mineral reserves and mineralized material, as well as a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, please see Newmont's most recent Annual Report on Form 10-K, filed on February 24, 2012, and other SEC filings.
3. Newmont's 2011 attributable gold production was 5,185Koz. 2011 attributable copper production was 206 Mlbs.
4. The future development of the Conga project remains subject to risks and uncertainties as disclosed on slide 2 – "Cautionary Statement." Development of the Conga project has been temporarily suspended as disclosed on November 30, 2011. Should the Company be unable to continue with the current development plan at Conga, Newmont may in the future reprioritize and reallocate capital to development alternatives in Nevada, Australia, Ghana, and Indonesia. See Cautionary Note on slide 2 of this presentation and the Company's related news release dated 11/30/11.
5. When used in this presentation, the phrase "potential production" represents the sum for all projects of the current estimated average annual production targets for 2017 for each such project anticipated to be commissioned by 2017. Additionally, unless otherwise indicated, references to potential production used in this presentation mean that portion that is attributable to Newmont's ownership or economic interest. Such estimates are subject to change based upon risks, future events and potential modifications to the business plan as indicated on slide 2. Newmont currently forecasts 2017 attributable gold and copper production of approximately 7Moz and 400 Mlbs, respectively.
6. Refer to slide 25 for reconciliation to GAAP net income attributable to Newmont stockholders.
7. Refer to slide 25 for reconciliation to GAAP net income attributable to Newmont stockholders.
8. Gold operating margin calculated as average realized gold price per ounce, less gold cost applicable to sales per ounce.
9. Copper operating margin calculated as average realized copper price per pound, less copper cost applicable to sales per pound.
10. Average realized gold price is determined for each preceding quarter net of applicable treatment and refining costs incurred during the quarter and provisional pricing mark-to-market adjustments, if any.
11. Newmont has established a gold price-linked dividend policy that serves as a non-binding guideline for Newmont's Board of Directors (the "Board"). The Board reserves all powers related to the declaration and payment of dividends. In addition, the declaration and payment of future dividends remain at the discretion of the Board and will be determined based on Newmont's financial results, cash and liquidity requirements, future prospects and other factors deemed relevant by the Board. In determining the dividend to be declared and paid on the common stock of the Company, the Board may revise or terminate such policy at any time without prior notice.
12. Figures shown for projects are on an attributable basis.
13. 2012 Outlook projections used in this presentation ("Outlook") are considered "forward-looking statements" and represents management's good faith estimates or expectations of future production results as of February 24, 2012 and is based upon certain assumptions. Such assumptions, include, but are not limited to those set forth on slides 3, 5 and 21, including gold price of $1,500/ounce, copper price of $3.50/pound, oil price of $90/barrel and Australian dollar exchange rate of 1.00. Consequently, Outlook cannot be guaranteed. Investors are cautioned that the Company does not undertake to subsequently reaffirm, provide comfort or otherwise update Outlook to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events. Investors should not assume that any lack of update constitutes a current reaffirmation of Outlook.
