NEWMONT®

CIBC 18th Annual Whistler Institutional Investor Conference

Laurie Brlas, Executive Vice President and CFO

January 21-24, 2015

Cautionary Statement

Cautionary statement regarding forward looking statements, including outlook:

This presentation contains “forward-looking statements” within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by such sections and other applicable laws. Such forward-looking statements may include, without limitation: (i) estimates of future production and sales; (ii) estimates of future costs applicable to sales and All-in sustaining costs; (iii) estimates of future capital expenditures and development capital; (iv) plans and expectations relating to savings, reductions in costs and expenditures, efficiency improvements and optimization; (v) expectations relating to decisions regarding future exploration, expansion or development projects; (vi) expectations regarding the development, growth and upside potential of operations and projects, including, without limitation, mine plans, ramp-up, first production, anticipated strip ratios, recovery rate and other project metrics; (vii) expectations regarding the future receipt of approvals, permits and licenses, including, without limitation, export approvals; (viii) expectations regarding the out-coming of ongoing negotiations, and (ix) expectations regarding financial flexibility, project funding, cash retention, free cash flow and portfolio optimization. Forward-looking statements often include words such as "anticipates," "estimates," "expects," "projects," "intends," "plans," "believes" and words and terms of similar substance in connection with discussions of future operating or financial performance. Estimates or expectations of future events or results are based upon certain assumptions, which may prove to be incorrect. Such assumptions, include, but are not limited to: (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company’s projects being consistent with current expectations and mine plans; (iii) political developments in any jurisdiction in which the Company operates being consistent with its current expectations; (iv) certain exchange rate assumptions for the Australian dollar to the U.S. dollar, as well as other exchange rates being approximately consistent with current levels; (v) certain price assumptions for gold, copper and oil; (vi) prices for key supplies being approximately consistent with current levels; and (vii) the accuracy of our current mineral reserve and mineral resource estimates. Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, such statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by the “forward-looking statements.” Such risks include, but are not limited to, gold and other metals price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, political and operational risks, community relations, conflict resolution and outcome of projects or oppositions and governmental regulation and judicial outcomes. For a more detailed discussion of such risks and other factors, see the Company’s 2013 Annual Report on Form 10-K, filed on February 21, 2014, with the Securities and Exchange Commission (“SEC”), as well as the Company’s other SEC filings. The Company does not undertake any obligation to release publicly revisions to any “forward-looking statement,” including, without limitation, outlook, to reflect events or circumstances after the date of this presentation, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. Investors should not assume that any lack of update to a previously issued “forward-looking statement” constitutes a reaffirmation of that statement. Continued reliance on “forward-looking statements” is at investors' own risk.

Why Newmont

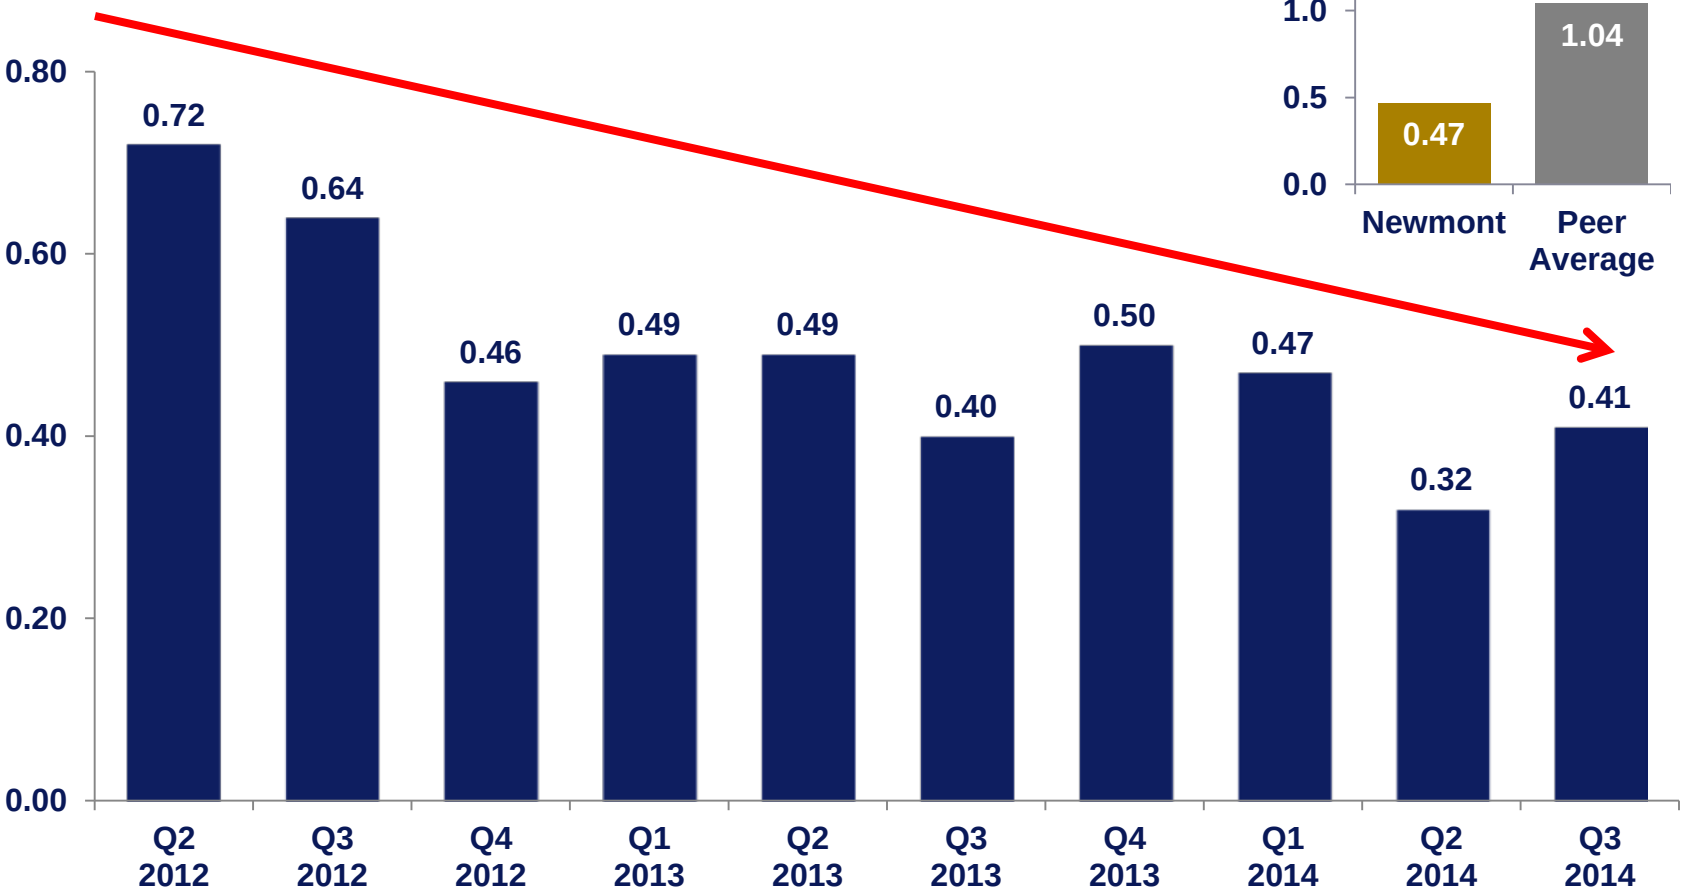

- Industry leading safety performance
- Optimized asset portfolio with stable production and cash flow base with a focus on value over volume
- Global portfolio with industry leading project pipeline
- Continuing trajectory of sustainable cost and efficiency improvement that offset inflation
- Strong balance sheet and disciplined capital allocation
- Positioning to thrive across cycles

Turf Vent Shaft site view

Delivering on our commitments

Industry leading safety performance

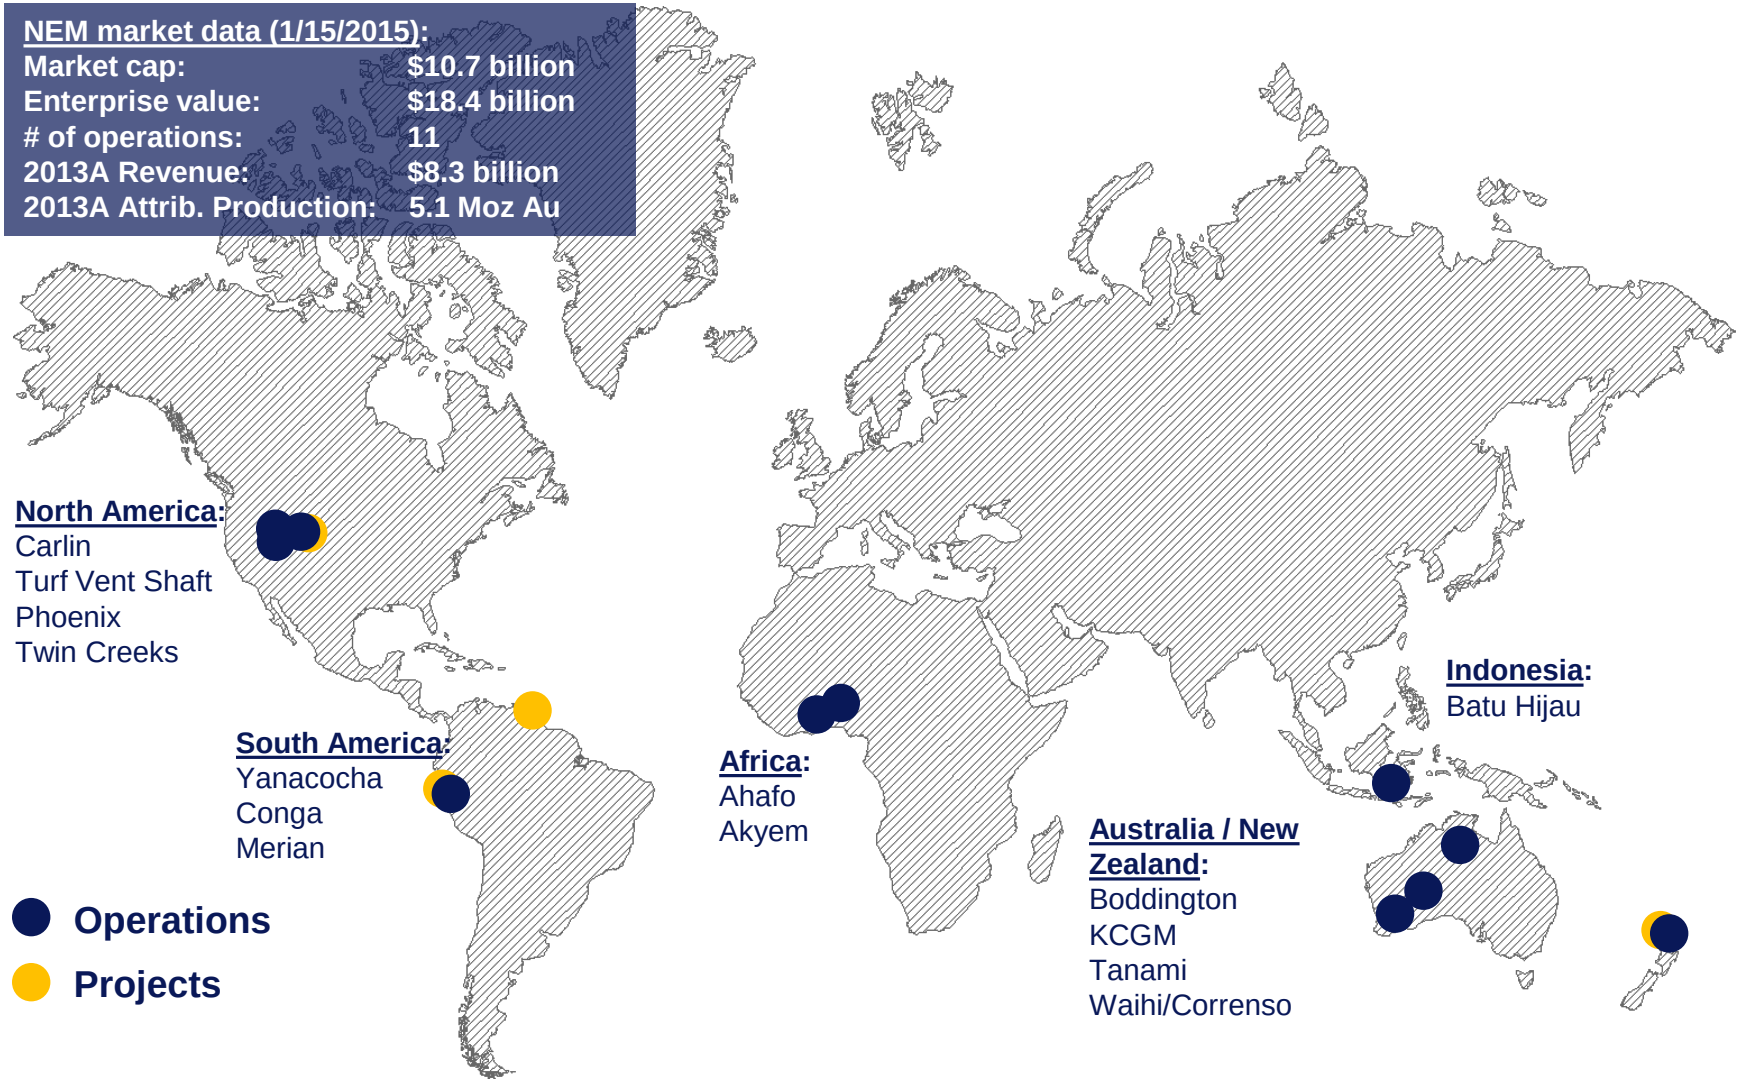

Total recordable accident frequency rate (per 200,000 hours worked)

Maximizing productivity and efficiency across portfolio

NEM market data (1/15/2015):

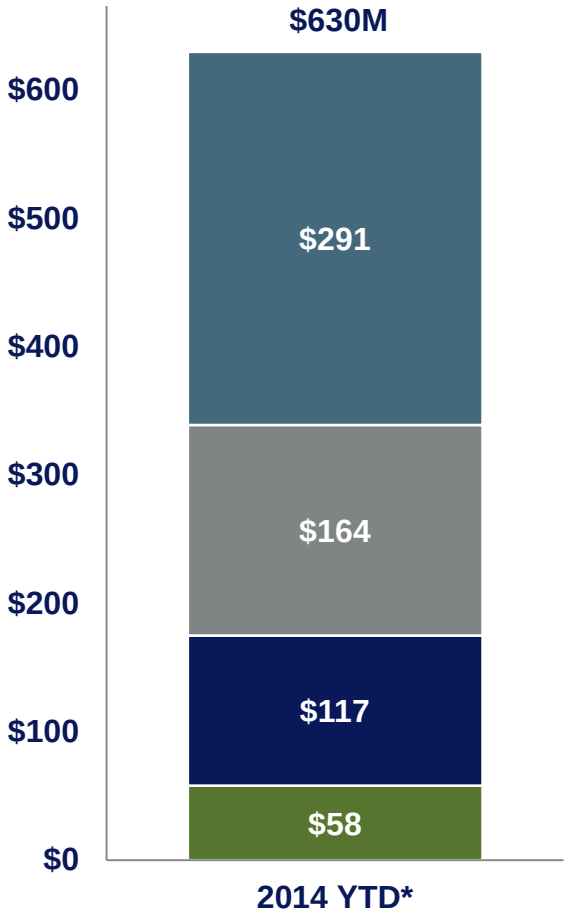

Market cap:	**$10.7 billion**
Enterprise value:	**$18.4 billion**
# of operations:	**11**
2013A Revenue:	**$8.3 billion**
2013A Attrib. Production:	**5.1 Moz Au**

% of 2014E gold production	*North America: 34%*	*South America: 12%*	*Africa: 19%*	*Australia/ New Zealand: 35%*	*Indonesia: 1%*

Cost and efficiency improvements total $630M YTD

Adjusted cash AISC savings[4] ($M)

CAS improvements

Sustaining Capital

Advanced Projects & Exploration

General & Administrative /Other**

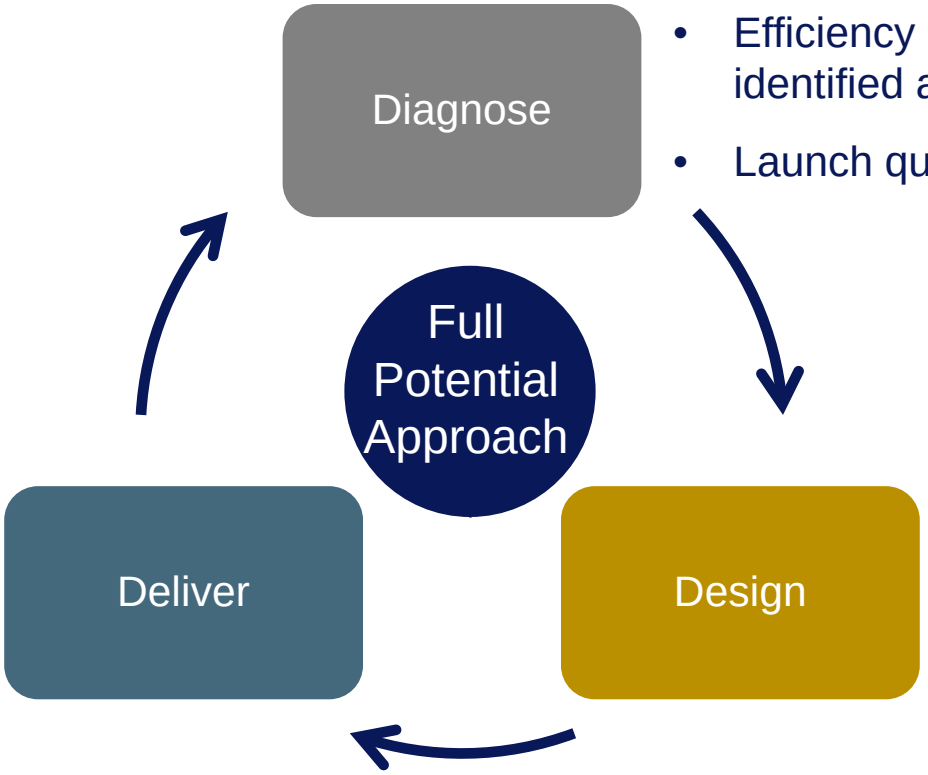

Examples of improvements

- **Ahafo**: CAS reduced 19% after re-aligning mining and milling rates
- **Boddington**: CAS reduced 26% following reduced mill downtime and throughput improvements
- **Ahafo**: sustaining capital reduced 33% due to slower mining rate, less equipment to replace
- Adv. Projects & exploration reduced 32%; focused on highest margin opportunities
- Corporate overhead reduced 13% after right-sizing headquarters

*2014 year-to-date savings reflects comparison of 9-months ended 09/30/14 versus 9-months ended 09/30/13. Non-GAAP metric. See slide 27 for reconciliation.
**Includes Remediation, Treatment and Refining Costs, and Other Expense, net.

Nearly $1.7B of savings since 2012

Full Potential Process

- Efficiency opportunities identified and prioritized
- Launch quick wins

- Identify solutions
- Design implementation plans
- Project management tracking

- Implement
- Monitor performance
- Transfer skills for ongoing continuous improvement
- Share knowledge across Newmont

Portfolio Optimization: Newmont's Rate and Rank approach

Overview

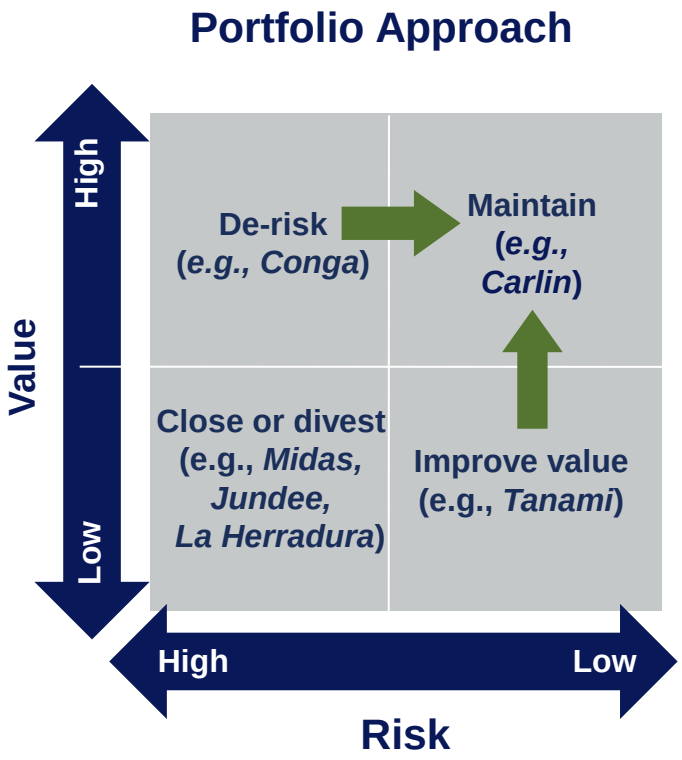

- Systematic means to compare assets against one another
- Compares internal operations and projects vs. external assets

Purpose & Uses

- Helps inform capital allocation decisions
- Revised as needed to ensure strategic alignment

Mechanics

- Excel-based tool that calculates metrics and ranks options
- Utilizes business plan data and external analysis

Position the business across cycles

Gold AISC[1] down 10% YTD*

	9 Months 2014	9 Months 2013
Average Realized Gold Price ($/oz)	$1,282	$1,442
Average Realized Copper Price ($/lb)	$2.75	$2.95
Attributable Gold Production (Koz)	3,584	3,617
Gold CAS ($/oz)	$733	$774
Gold AISC[1] ($/oz)	$1,031	$1,140

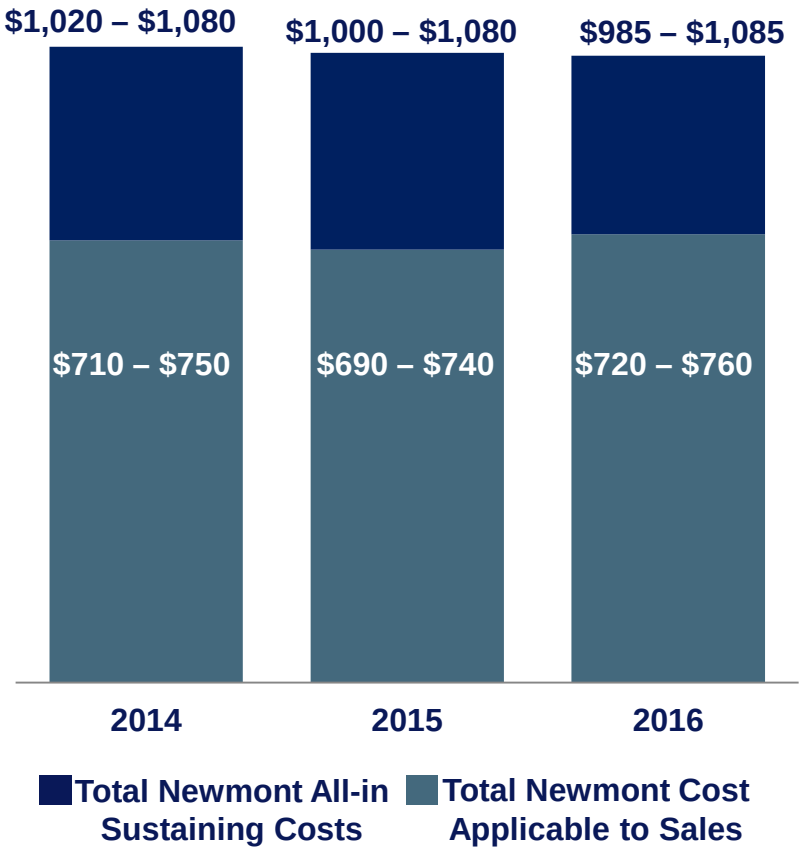

Average gold price down 11% Y-O-Y with $472 million improvement in free cash flow*

	9 Months 2014	9 Months 2013
Revenue ($M)	$5,275	$6,226
Adjusted Net Income ($M)[2]	$459	$480
Adjusted Net Income ($ per share)[2]	$0.92	$0.97
Cash from Continuing Operations ($M)	$889	$1,175
Free Cash Flow ($M)	$123	($353)

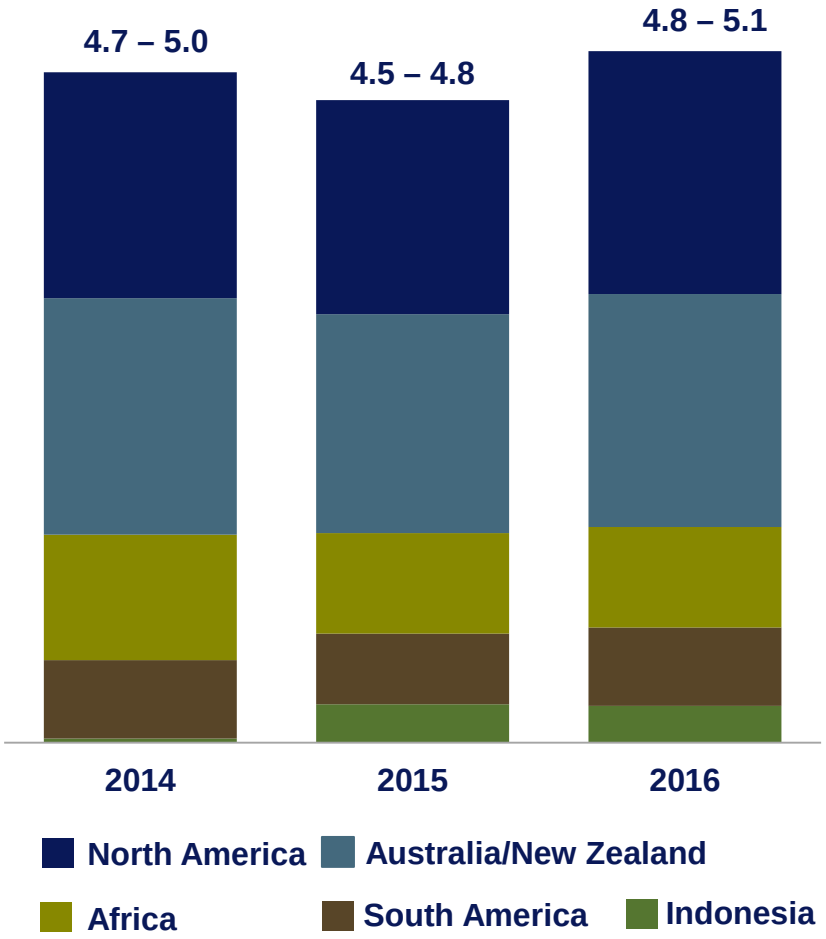

*Year-to-date figures reflect 9-months ended 09/30/14 versus 9-months ended 09/30/13.

Projecting stable costs and production

AISC[7] and CAS outlook ($/oz)[3]

Attributable gold production outlook (Moz)[3]

Strong project pipeline drives long-term value creation

Merian: New district in Suriname with upside potential

Strong feasibility and economics*

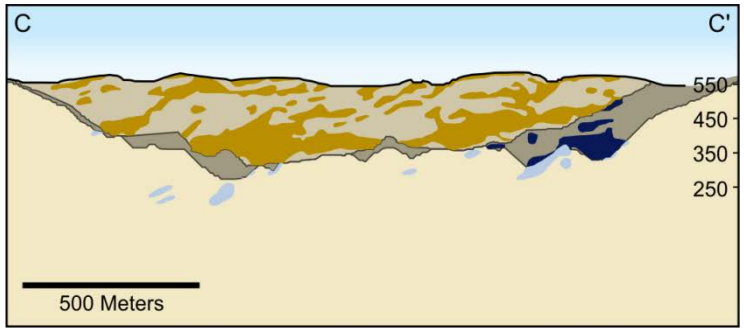

- Low strip ratio of 3:1 over LOM
- Capital Costs: $0.9B – $1.0B
- Production: 400 – 500 koz per year
- Gold CAS: $650 – $750/oz
- Gold AISC: $750 – $850/oz
- Gold Reserves of 4.2Moz[5] at 1.22 g/t

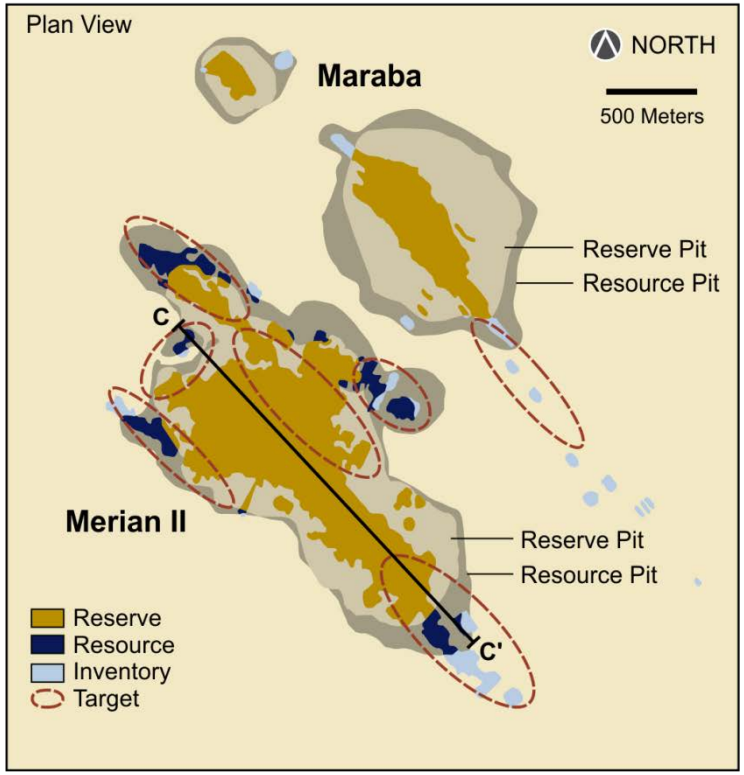

Funding

- Government of Suriname acquired 25% fully-funded equity stake in early November

Exploration upside

- Agreement covers 500,000 hectares with promising exploration results

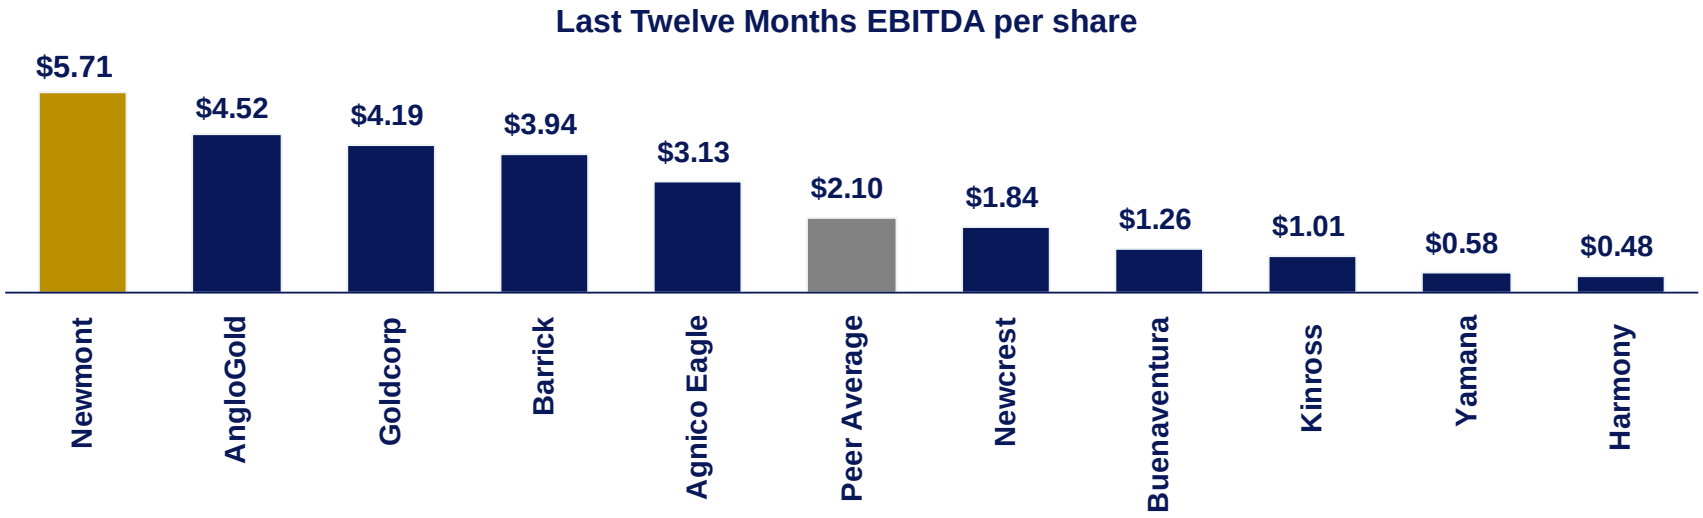

*Capital costs reported on a 100% basis with approximately $100 million sunk to date. Metrics are reported as first five year average unless otherwise noted. CAS and AISC are escalated assuming 3-4% inflation. See endnotes 5 and 6 for more information.

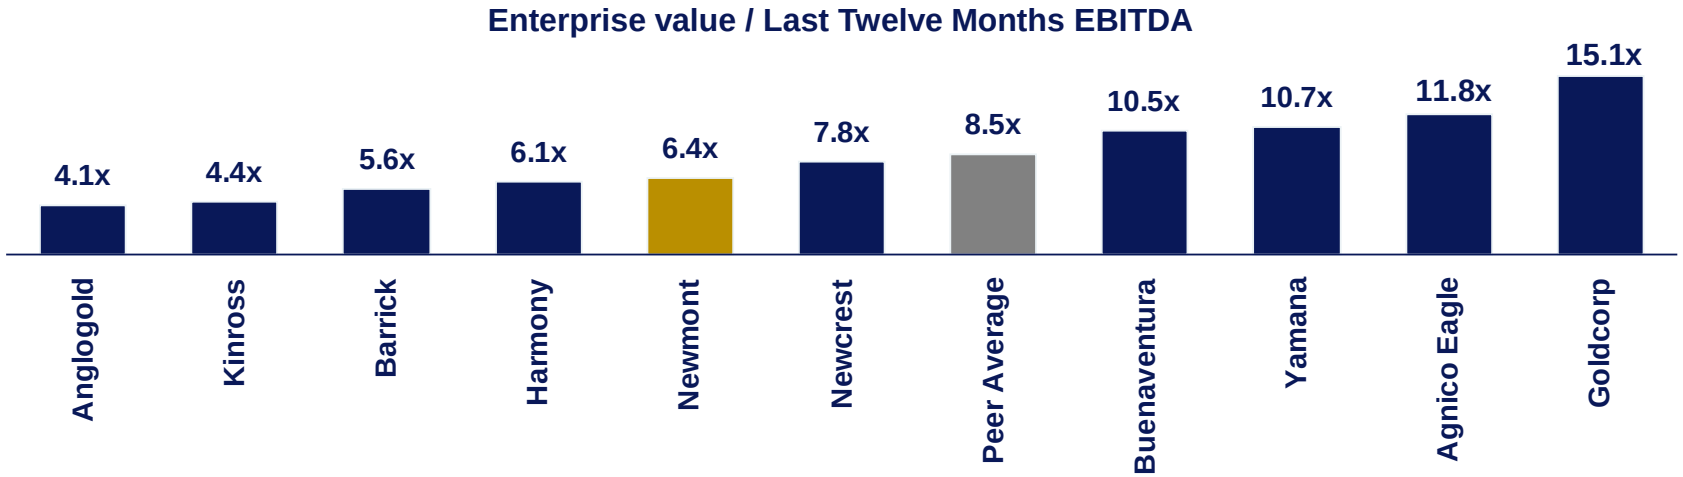

Free cash flow positive across price fluctuations

2015 contingency planning

$1,200/oz gold	$1,100/oz gold	$1,000/oz gold
• Operating costs and sustaining capital optimized to maintain positive free cash flow • Development capital prioritized for Merian, Tanami Expansion, Long Canyon Phase 1, and Ahafo Mill Expansion • Exploration spend focused on near-mine and high value targets • Support costs reduced across business • $0.10 dividend paid per annum • Debt repayment of up to $750 million made	• Continue with Merian development; reprioritize earlier stage projects based on value metrics • Maintain cost savings to offset inflation • Reduce sustaining capital spend • Generative exploration reduced • Further reduce support costs across business • No dividend payments per policy • Debt repayment of $166 million made	• Continue with Merian development; potentially slow development of earlier stage projects • Assess and potentially defer highest cost laybacks • Further reduce sustaining capital spend • Exploration focused on brownfields and near mine opportunities • Further reduce support costs across business • No dividend payments per policy • Debt repayment of $166 million made

Leader in EBITDA metrics*

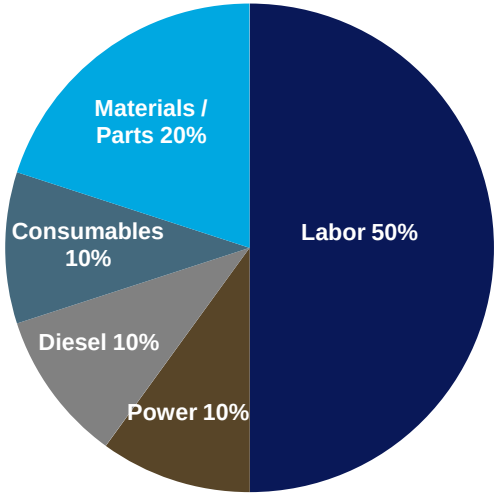

*Data source: Capital IQ; EBITDA data as of 09/30/2014, enterprise value as of 1/15/15.

Conservative plan with upside leverage

2015 sensitivities*

	2015 Plan Price	Change Increment	Consolidated FCF (US$M)	Attributable FCF (US$M)
Gold ($/oz)	$1,200	+$100	+$350	+$300
Copper ($/lb)	$2.75	+$0.25	+$100	+$50
Australian Dollar	$0.90	-0.05	+$40	+$40
Oil ($/bbl)	$100	-$10	+$30	+$20

2015E operating cost breakdown

- For every -$10 per barrel change in oil price, CAS decreases approximately $7.00 to $8.00 per ounce with leverage increasing as hedges roll off
- For every -0.05 change in the Australian dollar, CAS decreases approximately $8.00 to $9.00 per ounce with leverage increasing as hedges roll off

*All other variables held constant (i.e. FCF for flexed gold price does not include changes to copper price, AUD or WTI). Economics assume a 35% portfolio tax rate. Includes impacts from the Nevada Diesel and AUD hedge programs.

Gold price linked dividend

- Additional leverage for shareholders above $1,200/oz gold price
- Targeting 20-25% of free cash flow for dividends, reserving the remainder for projects and paying down debt

Annualized dividend per share (US$)*

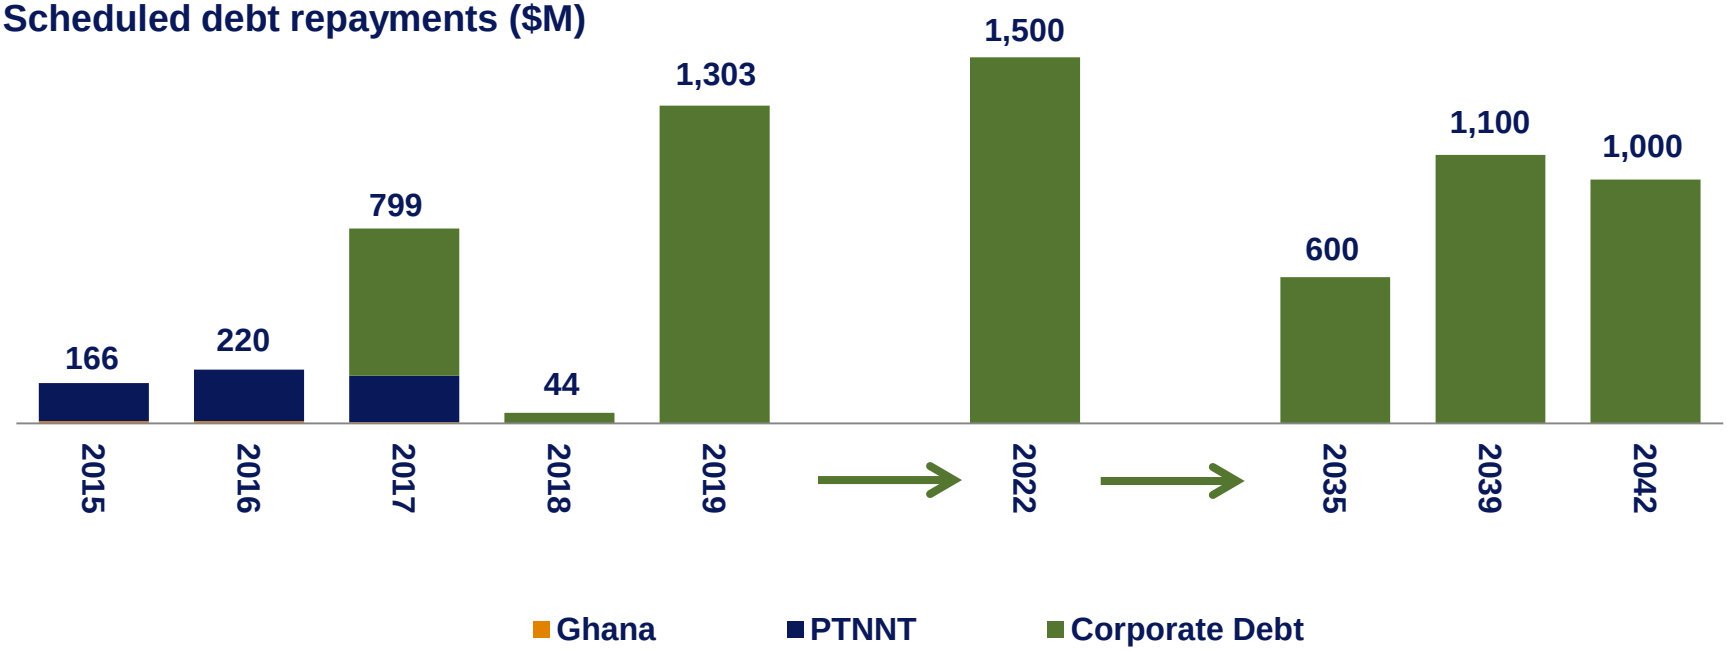

*For illustrative purposes, declaration of dividend remains subject to Board of Directors approval.

Maintaining investment grade credit rating

- Long-dated maturity with favorable terms
- No significant debt until 2019
- Revolver has one financial covenant; maximum net debt to book capital of 62.5% compared to 27.9% as of 30 September 2014

Scheduled debt repayments ($M)

Upcoming catalysts highlight profitable growth

Q1 2015

- FY14 results published
- FY14 reserve and resource update published
- Decision to proceed with Long Canyon Phase 1

Q2 2015

- Decision to proceed with Tanami Expansion
- Phase 6 higher grade ore sourced at Batu Hijau

Q3 2015

- Decision to proceed with Ahafo Mill Expansion

Q4 2015

- Turf Vent Shaft first production
- Correnso production expected

2016

- Decision to proceed with Subika Underground
- Merian first production expected

Charting a course to lead in value creation

	Where Newmont is Today	*Where Newmont is Heading*
Safety	Industry-leading safety performance	***Zero injuries and illnesses***
Portfolio Optimization	Nets $1.4B; focus shifted from volume to value	***New mines improve portfolio value, life, costs and risk profile***
Cost Improvements	$1.6 billion in cost, efficiency and technical improvements achieved since early 2013	***Ongoing improvements more than offset inflation***
All-in sustaining cost[7]	$1,031/ounce*	***At or below $1,000/ounce***
Free Cash Flow	$123 million in free cash flow generated in 2014*	***Expanding free cash flow generation***
Profitable growth	Growth through profitable near-mine expansions	***New district potential realized in Suriname and Nevada***
Balance sheet strength and market returns	Dividend policy funded through free cash flow; five quarters of meeting or beating street expectations	***First quartile total shareholder returns***

*YTD through Q3 2014.

Appendix

Key development projects

Mine / Project	Location	Stage	Initiative
Merian[6]	Suriname	Execution	• Approved the Merian project for development (07/24/14) • Gold reserves of 4.2Moz; average first five years annual production of 400,000 to 500,000 Au at competitive costs • First production expected late 2016
Turf Vent Shaft	Nevada	Execution	• On time and on budget with first expected production in late 2015 • Expected to add between 100,000 and 150,000 ounces per year
Correnso	New Zealand	Execution	• Working closely with the community to ensure successful development of new underground mine expansion • Development extends Waihi life with commercial production expected in 2015
Long Canyon	Nevada	Feasibility	• Phased approach to development • Potential to deliver about 150,000 ounces Au production per year at competitive costs in Phase 1 • Decision to proceed expected in early 2015
Tanami Expansion	Australia	Pre-feasibility	• Development extends the life of the mine • Potential to add about 50,000 to 60,000 ounces of production (1st 5 years avg) • Decision to proceed expected in 1H/2015
Ahafo Mill	Ghana	Pre-feasibility	• Increase throughput and help counter lower-grade ore • Potential to add about 100,000 to 200,000 ounces of production • Decision to proceed expected in 2015
Subika Underground	Ghana	Pre-feasibility	• Improve ore grade and add about 150,000 to 200,000 ounces of annual production in Ghana • Decision to proceed expected in late 2015 or early 2016

2014 Outlook[a] as of October 30, 2014

	Consolidated Production (kozs, kt)	Attributable Production (kozs, kt)	Consolidated CAS ($/oz, $/lb)	All-in Sustaining Costs[b] ($/oz, $/lb)	Consolidated Capital Expenditures ($M)

a The outlook ranges presented herein represent forward looking statements, which are subject to certain risks and uncertainties. See cautionary statement at the end of this presentation on slide 29. Additionally, individual site ranges in the table above may not sum to total regional or Company levels to provide for portfolio flexibility.
b Non-GAAP measure, see endnote 1 on slide 29.
c Includes Lone Tree operations.
d Includes GTRJV operations.
e Both consolidated and attributable production are shown on a pro-rata basis with a 44% ownership interest for La Herradura (up until closing of the sale on October 6, 2014) and a 50% ownership for KCGM.
f Consolidated production for Yanacocha is presented on a total production basis for the mine site; whereas attributable production represents a 51.35% ownership interest.
g La Zanja and Duketon are not included in the consolidated figures above; attributable production figures are presented based upon a 46.94% ownership interest at La Zanja and a 19.45% ownership interest in Duketon.
h Consolidated production for Batu Hijau is presented on a total production basis for the mine site; whereas attributable production represents 48.5% ownership interest in 2014 and an expected 44.5625% ownership interest in 2015- 2016 outlook (which assumes completion of the remaining share divestiture in early 2015). Outlook for Batu Hijau remains subject to various factors, including, without limitation, renegotiation of the CoW, issuance of future export approvals following the expiration of the six-month permit, negotiations with the labor union, future in-country smelting availability and regulations relating to export quotas, and certain other factors.
See endnote 8.

2014 – 2016 Outlook[a] as of October 30, 2014

2014 Expense Outlook

General & Administrative	$175 - $200
Other Expense	$150 - $175
Interest Expense	$325 - $350
DD&A	$1,210 - $1,320
Exploration and Projects	$370 - $410
Sustaining Capital	$910 - $1,000
Tax Rate	17% - 22%

All-in sustaining costs

Newmont has worked to develop a metric that expands on GAAP measures such as cost of goods sold and non-GAAP measures to provide visibility into the economics of our mining operations related to expenditures, operating performance and the ability to generate cash flow from operations.

Current GAAP-measures used in the mining industry, such as cost of goods sold, do not capture all of the expenditures incurred to discover, develop, and sustain gold production. Therefore, we believe that All-in sustaining costs and attributable All-in sustaining costs are non-GAAP measures that provide additional information to management, investors, and analysts that aid in the understanding of the economics of our operations and performance compared to other producers and in the investor's visibility by better defining the total costs associated with production.

All-in sustaining cost ("AISC") amounts are intended to provide additional information only and do not have any standardized meaning prescribed by GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. The measures are not necessarily indicative of operating profit or cash flow from operations as determined under GAAP. Other companies may calculate these measures differently as a result of differences in the underlying accounting principles, policies applied and in accounting frameworks such as in International Financial Reporting Standards ("IFRS"), or by reflecting the benefit from selling non-gold metals as a reduction to AISC. Differences may also arise related to definitional differences of sustaining versus development capital activities based upon each company's internal policies.

The following disclosure provides information regarding the adjustments made in determining Newmont's All-in sustaining costs measure:

Cost Applicable to Sales - Includes all direct and indirect costs related to current production incurred to execute the current mine plan. Costs Applicable to Sales ("CAS") includes by-product credits from certain metals obtained during the process of extracting and processing the primary ore-body. CAS is accounted for on an accrual basis and excludes Amortization and Reclamation and remediation, which is consistent with our presentation of CAS on the Condensed Consolidated Statements of Income. In determining All-in sustaining costs, only the CAS associated with producing and selling an ounce of gold or a pound of copper is included in the measure. Therefore, the amount of CAS included in AISC is derived from the CAS presented in the Company's Condensed Consolidated Statements of Income. The allocation of CAS between gold and copper at the Phoenix, Boddington, and Batu Hijau mines is based upon the relative production percentage of copper and gold sold during the period.

Remediation Costs - Includes accretion expense related to asset retirement obligations ("ARO") and the amortization of the related Asset Retirement Cost ("ARC") for the Company's operating properties recorded as an ARC asset. Accretion related to ARO and the amortization of the ARC assets for reclamation and remediation do not reflect annual cash outflows but are calculated in accordance with GAAP. The accretion and amortization reflect the periodic costs of reclamation and remediation associated with current gold production and are therefore included in the measure. The allocation of these costs to gold and copper is determined using the same allocation used in the allocation of CAS between gold and copper at the Phoenix, Boddington, and Batu Hijau mines.

Advanced Projects and Exploration - Includes incurred expenses related to projects that are designed to increase or enhance current gold production and gold exploration. We note that as current resources are depleted, exploration and advance projects are necessary for us to replace the depleting reserves or enhance the recovery and processing of the current reserves. As this relates to sustaining our gold production, and is considered a continuing cost of a mining company, these costs are included in the AISC measure. These costs are derived from the Advanced projects, research and development and Exploration amounts presented in the Company's Condensed Consolidated Statements of Income. The allocation of these costs to gold and copper is determined using the same allocation used in the allocation of CAS between gold and copper at the Phoenix, Boddington, and Batu Hijau mines.

General and Administrative - Includes cost related to administrative tasks not directly related to current gold production, but rather related to support our corporate structure and fulfilling our obligations to operate as a public company. Including these expenses in the AISC metric provides visibility of the impact that general and administrative activities have on current operations and profitability on a per ounce basis.

Other Expense, net - Includes costs related to regional administration and community development to support current production. We exclude certain exceptional or unusual expenses from Other expense, net, such as restructuring, as these are not indicative to sustaining our current operations. Furthermore, this adjustment to Other expense, net is also consistent with the nature of the adjustments made to Net income (loss) as disclosed in the Company's non-GAAP financial measure Adjusted net income (loss). The allocation of these costs to gold and copper is determined using the same allocation used in the allocation of CAS between gold and copper at the Phoenix, Boddington, and Batu Hijau mines.

Treatment and Refining Costs - Includes costs paid to smelters for treatment and refining of our concentrates to produce the salable precious metal. These costs are presented net as a reduction of Sales.

Sustaining Capital - We determined sustaining capital as those capital expenditures that are necessary to maintain current gold production and execute the current mine plan. Capital expenditures to develop new operations, or related to projects at existing operations where these projects will enhance gold production or reserves, are considered development. We determined the breakout of sustaining and development capital costs based on a systematic review of our project portfolio in light of the nature of each project. Sustaining capital costs are relevant to the AISC metric as these are needed to maintain the Company's current gold operations and provide improved transparency related to our ability to finance these expenditures from current operations. The allocation of these costs to gold and copper is determined using the same allocation used in the allocation of CAS between gold and copper at the Phoenix, Boddington, and Batu Hijau mines.

All-in sustaining costs

(1)Excludes Depreciation and amortization and Reclamation and remediation.

(2)Includes by-product credits of $84.

(3)Includes stockpile and leach pad inventory adjustments of at $3 Carlin, $63 at Yanacocha, $110 at Boddington, $1 at Tanami, $3 at Waihi, $45 at Kalgoorlie, and $385 at Batu Hijau.

(4)Remediation costs include operating accretion of $45 and amortization of asset retirement costs of $70.

(5)Other expense, net is adjusted for restructuring costs of $50 and TMAC transaction costs of $45.

(6)Excludes development capital expenditures, capitalized interest, and the increase in accrued capital of $775. The following are major development projects: Phoenix Copper Leach, Turf Vent Shaft, Vista Vein, La Herradura Mill, Yanacocha Bio Leach, Conga, Merian, Ahafo North, Ahafo Mill Expansion, Subika Underground, and Akyem for 2013.

Adjusted cash all-in sustaining cost savings

Nine Months Ended September 30, 2014	Costs Applicable to Sales	Remediation Costs	Advanced Projects and Exploration	General and Administrative	Other Expense, Net	Treatment and Refining Costs	Sustaining Capital	All-In Sustaining Costs
Gold and Copper Consolidated[1]	$ 3,328	$ 132	$ 239	$ 138	$ 129	$ 57	$ 577	$ 4,600
Adjustments:								
Stockpile and Leach Pad Inventory[4]	(430)	-	-	-	-	-	-	(430)
Abnormal Production Costs at Batu Hijau	(53)	-	-	-	-	-	-	(53)
Adjusted Consolidated AISC	$ 2,845	$ 132	$ 239	$ 138	$ 129	$ 57	$ 577	$ 4,117

Nine Months Ended September 30, 2013	Costs Applicable to Sales	Remediation Costs	Advanced Projects and Exploration	General and Administrative	Other Expense, Net	Treatment and Refining Costs	Sustaining Capital	All-In Sustaining Costs
Gold and Copper Consolidated[1]	$ 3,817	$ 115	$ 360	$ 158	$ 165	$ 77	$ 753	$ 5,445
Adjustments:								
Stockpile and Leach Pad Inventory[4]	(610)	-	-	-	-	-	-	(610)
Jundee[2]	(49)	-	(3)	-	-	-	(9)	(61)
Midas[3]	(22)	-	(1)	-	(1)	-	(3)	(27)
Adjusted Consolidated AISC	$ 3,136	$ 115	$ 356	$ 158	$ 164	$ 77	$ 741	$ 4,747

(1) AISC is a non-GAAP metric, for reconciliation to CAS see slides 24 – 26.

(2) Jundee was sold on July 1, 2014.

(3) Midas was sold on February 11, 2014 and was included in the Twin Creeks segment.

(4) Referred to elsewhere as NRV adjustments.

Adjusted net income

Non-GAAP financial measures are intended to provide additional information only and do not have any standard meaning prescribed by generally accepted accounting principles ("GAAP"). These measures should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP.

Adjusted net income (loss)

Management of the Company uses Adjusted net income (loss) to evaluate the Company's operating performance, and for planning and forecasting future business operations. The Company believes the use of Adjusted net income (loss) allows investors and analysts to compare results of the continuing operations of the Company and its direct and indirect subsidiaries relating to the production and sale of minerals to similar operating results of other mining companies, by excluding exceptional or unusual items. Management's determination of the components of Adjusted net income (loss) are evaluated periodically and based, in part, on a review of non-GAAP financial measures used by mining industry analysts. Net income (loss) attributable to Newmont stockholders is reconciled to Adjusted net income (loss) as follows:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2014	2013	2014	2013
Net income (loss) attributable to Newmont stockholders	$ 213	$ 398	$ 493	$ (1,347)
Loss (income) from discontinued operations	(3)	21	16	(53)
Impairments and loss provisions	5	29	12	1,530
Tax valuation allowance	21	-	(77)	535
Restructuring and other	11	12	18	28
Asset sales	(17)	(243)	(31)	(243)
Abnormal production costs at Batu Hijau	19	-	28	-
TMAC transaction costs	-	-	-	30
Adjusted net income (loss)	$ 249	$ 217	$ 459	$ 480
Adjusted net income (loss) per share, basic	$ 0.50	$ 0.44	$ 0.92	$ 0.97
Adjusted net income (loss) per share, diluted	$ 0.50	$ 0.44	$ 0.92	$ 0.97

Endnotes

Investors are encouraged to read the information contained in this presentation in conjunction with the following notes, the Cautionary Statement on slide 2 and the factors described under the "Risk Factors" section of the Company's most recent Form 10-K, filed with the SEC on February 21, 2014, and disclosure in the Company's recent SEC filings including the Form 10-Q.

1. AISC or All-in sustaining cost is a non-GAAP metric. See pages 24 to 26 for more information and a reconciliation to the nearest GAAP metric.

2. Adj. Net Income is a non-GAAP metric. See page 28 for more information and reconciliation to the nearest GAAP metric.

3. 2014 and 2014 - 2016 Outlook projections used in this presentation ("Outlook") are considered "forward-looking statements" and represent management's good faith estimates or expectations as October 30, 2014. However, Outlook is based upon certain assumptions, including, but not limited to, metal prices, oil prices, certain exchange rates and other assumptions (including, without limitation, those set forth on slide 2). For example, 2014 Outlook assumes $1,200/oz Au, $3.00/lb Cu, $0.95 USD/AUD exchange rate and $100/barrel WTI ; 2015 Outlook assumes $1,200/oz Au, $2.75/lb Cu, $0.90 USD/AUD exchange rate and $100/barrel WTI; and 2016 Outlook assumes $1,200/oz Au, $2.75/lb Cu, $0.90 USD/AUD exchange rate and $100/barrel WTI and other assumptions. Such assumptions may prove to be incorrect and actual results may differ materially from those anticipated. Consequently, Outlook cannot be guaranteed. As such, investors are cautioned not to place undue reliance upon Outlook and forward-looking statements as there can be no assurance that the plans, assumptions or expectations upon which they are placed will occur.

4. Adjusted cash AISC is a non-GAAP metric and is calculated as gold and copper all-in sustaining cost less net realizable value (NRV), Batu related abnormal costs, and adjusted for the sales of Midas and Jundee. See slide 27 for details.

5. Reserves at Merian (as of December 31, 2013 on a 100% consolidated basis) were estimated at 108,250 ktonnes of Probable Reserves, grading 1.22 gpt for 4.2Moz, using a $1,300/oz gold price assumption. Resources at Merian (as of December 31, 2013 on a 100% consolidated basis and using a $1,400/oz gold price assumption) were 750 kounces of Measured and Indicated resources, comprised of Measured resources of approximately 77 kounces (2,400 ktonnes, at 0.98 grams per tonne) and Indicated resources of approximately 677 kounces (20,500 ktonnes, at 1.03 grams per tonne). Inferred resources totaled approximately 926 kounces (26,800 ktonnes, at 1.07 grams per tonne). U.S. investors are reminded that "reserves" were prepared in compliance with Industry Guide 7 published by the U.S. SEC. Whereas, the terms "resources," "Measured and Indicated resources" and Inferred resources" are not SEC recognized terms. Newmont has determined that such "resources" would be substantively the same as those prepared using the Guidelines established by the Society of Mining, Metallurgy and Exploration and defined as "Mineral Resource". Estimates of resources are subject to further exploration and development, are subject to additional risks, and no assurance can be given that they will eventually convert to future reserves. Inferred Resources, in particular, have a great amount of uncertainty as to their existence and their economic and legal feasibility. Investors are cautioned not to assume that any part or all of the Inferred Resource exists, or is economically or legally mineable. Mineral inventory is also subject to an even greater degree of uncertainty. Investors are reminded that even if significant mineralization is discovered and converted to reserves, during the time necessary to ultimately move such mineralization to production the economic feasibility of production may change. See the Company's Annual Report filed with the SEC on February 21, 2014 for the "Proven and Probable Reserve" tables prepared in compliance with the SEC's Industry Guide 7. Investors are reminded that the tables presented in the Annual Report are estimates as of December 31, 2013 and were presented on an attributable basis reflecting the Company's ownership interest at such time. The company presently holds a 75% equity interest in the Merian project as a result of the government of Suriname recent opt-in.

6. The project metrics presented for the Merian project are based upon management's reasonable good faith belief as of the date of this presentation and are presented on a consolidated basis. The listed project metrics constitute forward-looking statements and are subject to certain risks and uncertainties.

Endnotes

7. All-in sustaining cost ("AISC") as used in the Company's Outlook is a non-GAAP metric defined as the sum of cost applicable to sales (including all direct and indirect costs related to current gold production incurred to execute on the current mine plan), remediation costs (including operating accretion and amortization of asset retirement costs), G&A, exploration expense, advanced projects and R&D, treatment and refining costs, other expense, net of one-time adjustments and sustaining capital.

8. Investors are reminded that the negotiation of the amendment to the Contract of Work contemplated by the MoU remains on-going. Continued future operations at Batu Hijau are subject to various factors, including, without limitation, the successful renegotiation of the Contract of Work, issuance of future export permits and approvals following the expiration of the six-month permit, negotiations with the labor union, future in-country smelting availability and regulations relating to export quotas, and certain other factors. For a discussion of other factors which could impact future financial performance and operating results at Batu Hijau, see Item 1A, under the heading "Risk Factors," of the Company's Form 10-K, filed on February 21, 2014, as well as Note 2 under the heading "Summary of Significant Accounting Policies - Risks and Uncertainties" of the Notes to the Financial Statements contained in the Company's Form 10-Q, filed on or about October 30, 2014.
