Our Commitment to Environmental Sustainability

GFL Environmental, a leading North American environmental services company, is committed to responsible and sustainable growth. Visibly enabling the innovation of environmental solutions in our business is an integral part of how we will fulfill our commitment to environmental sustainability. As leaders in the environmental solutions industry, we will model how we can reduce our own environmental footprint in our operations and provide accessible, cost effective environmental solutions to our customers enabling GFL, our customers and the communities we serve to be *green for life*.

The ability to provide accessible and cost effective environmental solutions will be realized through innovation of our business processes and the environmental solutions that we provide. We will work to have these accomplishments recognized both internally and externally. Our interim goals to reduce our environmental footprint are achieved through a number of key initiatives. In the coming years, we will have established corporate level targets to reduce our overall carbon footprint.

To achieve our goals, GFL will:

- Comply with all applicable environmental laws and regulations
- Embed environmental management and sustainability into our culture through visible leadership and fostering engagement and accountability at all levels
- Provide our people with the information and tools they need to achieve our goals and empower them to develop innovative solutions to minimize our environmental impacts and those of our customers
- Integrate environmental sustainability into our business decisions and operations
- Invest in organizational resources and programs required to achieve our goals
- Monitor and report on our performance internally and externally and hold ourselves accountable to meeting our goals and commitments
- Collaborate and work constructively with other stakeholders to increase our knowledge and advance our collective progress in the areas of climate change and the circular economy
