Last year we looked at some of the best gaming headsets available on the Xbox One. Our top pick, at the time, was the Plantronics Rig Flex LX. Since then though, a number of new headsets have entered the market including the updated SteelSeries Wireless line, as well as new sets from Kingston, Polk Audio and Astro.

Plantronics Rig Flex LX (Wired)

At \$130 MSRP, the Plantronics Rig Flex LX is on the pricier side for a stereo wired headset, but it managed to snag our top spot in our previous round-up due to its combination of comfort, excellent chat quality, and clean, well-balanced audio. You can wear this headset for hours, which you'll want to do: even on the most bass-heavy EQ setting, lows are nice and punchy without overwhelming the mids and highs, and it's very easy to hear both small audio details and what direction they're coming from.

The style of the Flex LX's included controller dongle is an improvement over Microsoft's stereo headset adapter, too. Instead of pressing buttons that show no indication of just how loud or soft you've made your game or your XBL party, you'll use a knob to control the volume, and a dial to control the balance between game and chat audio. You'll be able to see your settings at a glance.

And though it doesn't take the sting away from the price tag, the Flex LX comes with a second cable that lets you ditch the boom mic—handy for when you're using these cans with a mobile device.
