

## NEWS RELEASE

# BioTek reMEDys Honors the Work of Infusion Nurses on National IV Nurse Day

1/25/2024

NEW CASTLE, Del.--(BUSINESS WIRE)-- In recognition of National IV Nurse Day, **BioTek reMEDys**, a multi-site national integrated infusion therapy provider focused on providing support to people with rare diseases, is publicly calling for awareness of safe medication use for patients with rare diseases and conditions, while celebrating the critical contributions of IV Nurses nationwide and applauding the decades of continuing education, advocacy, and professional development that have driven the infusion specialty.

"As a specialty pharmacy organization focused on the highly specific needs of patients living with rare conditions, we are particularly grateful to IV nurses and the integral role they play in the healthcare continuum," said Chaitanya Gadde, CEO and founder of BioTek reMEDys. "National IV Nurse Day is a time to recognize the powerful impact these professionals – who we proudly work alongside on a daily basis – have on the patient population, and on the healthcare system as a whole. We are passionate about shining a spotlight on these nurses' efforts to ensure that IV medication use is safe and patients are achieving optimal outcomes."

"Having the opportunity to work directly with patients in the infusion suite and communicate with the nurses in the homes, I see the difference that collaborative care makes in these patients' lives," said Christine Hall RN, BSN. "While nurses get the opportunity to work directly with the patients, we appreciate the support from the many people in the pharmacy who help to facilitate every aspect of each patient's care."

Founded by the **Infusion Nurse Society**, an international nonprofit organization representing infusion nurses and other clinicians engaged in the specialty practice of infusion therapy, National IV Nurse Day is celebrated each year

on January 25th.

BioTek reMEDys provides therapy-specific patient education materials and its National Customer Support Center is available 24 hours a day, seven days a week to help patients and their loved ones manage critical aspects of care. By servicing very specific disease states, BioTek reMEDys' expert team can maintain its focus on patient care – making sure that dosages and treatments are appropriate.
