CORRECTING and REPLACING AppOmni Launches Free SaaS Data Leakage Detection Scanner

5/4/2023

SaaS security leader demonstrates commitment to helping organizations understand and remediate data leakage risks in all SaaS applications.

SAN FRANCISCO--(BUSINESS WIRE)-- Please replace the release dated 03-Mar-2023 12:30 PM ET with the following corrected version due to multiple revisions.

The updated release reads:

APPOMNI LAUNCHES FREE SAAS DATA LEAKAGE DETECTION SCANNER

SaaS security leader demonstrates commitment to helping organizations understand and remediate data leakage risks in all SaaS applications.

AppOmni, the leader in SaaS Security, has announced its free **SaaS Data Leakage Detection Scanner** to help organizations secure their SaaS platforms from data exposure risks and misconfigurations.

SaaS data leaks recently identified by Krebs on Security have resulted in exposure of numerous organizations' sensitive data. These data leaks occur when SaaS customers' access control permissions are misconfigured. The reported misconfigurations, along with others previously discovered by AppOmni's Principal SaaS Security Engineer Aaron Costello, are frequent targets for threat actors seeking to compromise an organization's SaaS estate.

AppOmni's SaaS Data Leakage Detection Scanner will evaluate SaaS instances for misconfigurations and data exposure risks. The scanner will then determine if a SaaS application is impacted by the recently disclosed data exposures and provide steps for remediating them.

The scanner is available at **appomni.com**. "These data leaks — and the permissions misconfigurations that led to them — reinforce the urgency for organizations of all stripes to prioritize SaaS security," Brendan O'Connor, AppOmni CEO and Co-Founder, said. "The importance of identifying and mitigating these risks cannot be overstated."

As SaaS products have grown exponentially more powerful and complex, ensuring correct security and access configuration settings are in place across the SaaS ecosystem is increasingly challenging for overburdened SaaS application owners and security teams. The matter is further complicated as SaaS providers routinely introduce new features into their products and enable them by default, boosting the likelihood of inadvertently exposing SaaS customers to new risks.

AppOmni is the leader in identifying and remediating these SaaS security risks. The company provides security and IT teams, along with SaaS applications owners, advanced security tooling to understand and remediate misconfigurations, overpermissioned users, data exposure risks, and unsanctioned SaaS-to-SaaS connections. These prevention measures are complemented with AppOmni's threat detection capabilities to drastically diminish the attack surface and help security teams make smarter decisions, faster.

H-ISAC Spring Americas Summit attendees can visit AppOmni at Booth 47 between May 9 - 11 to speak with SaaS data exposure and misconfiguration experts. "The ISAC community represents the best in cybersecurity information-sharing and professional growth, and our team is ready and eager to help all ISAC members protect their organizations' most sensitive SaaS data," O'Connor added.

For more information about securing SaaS apps, visit **appomni.com**. Or email **info@appomni.com** to learn more.

About AppOmni

AppOmni is the leader in SaaS Security. AppOmni provides unprecedented data access visibility, management, and security of SaaS solutions, enabling organizations to secure mission-critical and sensitive data. AppOmni's patent-pending technology deeply scans APIs, security controls, and configuration settings to evaluate the current state of SaaS deployments and compare against best practices and business intent. With AppOmni, organizations can establish rules for data access, data sharing, and SaaS-to-SaaS applications that will be continuously and automatically validated. The company's leadership team brings expertise and innovation from leading SaaS providers, high tech companies, and cybersecurity vendors. Backed by Cisco Investments, Salesforce Ventures,

ServiceNow Ventures, Scale Venture Partners and more, AppOmni was recently named as a PURE CYBER 100 "**Companies To Watch In 2023**" and one of **CyberTech 100's Companies for 2022**. The company has been recognized as a **Dark Reading Cybersecurity Vendor to Watch** and a **SINET16 Innovator**.
