Cyemptive Technologies Launches New Website Featuring its Military-Grade Cybersecurity Solutions for Business and Government

11/7/2023

Provides Layers of Pre-emptive Protection that Stop Threats in Seconds Before Infiltration

SEATTLE--(BUSINESS WIRE)-- Cyemptive Technologies, an award-winning provider of pre-emptive cybersecurity solutions, today launched a new website featuring its military-grade cybersecurity solutions for business and government.

Cyemptive's solutions offer military-grade layers of pre-emptive protection that can be added to customers' existing solutions to prevent damage. Cyemptive's pre-emptive protection features Cyemptive ZeroStrike, an industry-first technology that focuses on defeating damage, even from unknown zero-day attacks.

"Damage from cyber-attacks - particularly ransomware - are continuing to rise in spite of the industry's best efforts. We need new approaches and technologies to get cybersecurity intrusions under control," said Ray McCay, Chief Revenue Officer for Cyemptive. "Proactive approaches are needed that pre-emptively stop all cyber-attacks and threats before they can infiltrate a system or environment. At Cyemptive, we seek to put organizations in command of their security posture, rather than find themselves in reactive approaches and costly post intrusion remediation."

Cyemptive ZeroStrike, powered by CyberSlice®, detects and eliminates threats before they infiltrate the computing environment by keeping systems in a protected, available state. Cyemptive CyberScan platform scans files to detect and prevent the most sophisticated ransomware events before they compromise the environment.

“Cyemptive’s military-grade solutions offer business and government entities the outside-the-box innovation needed to level the playing field in any meaningful way against the world’s malicious cyber actors,” said Vince Dova, former Branch Chief for Cyber Policy and Capabilities at the Joint Chiefs of Staff and a retired U.S. Navy Commander, who serves as Cyemptive’s Vice President of Security.

Cyemptive’s cybersecurity solutions include:

- Perimeter Command, which offers complete end-to-end perimeter protection
- Endpoint Command, which kills ransomware and secures remote workforces
- Data & File Command, which stops infiltration even from insider threats
- Infrastructure Command, prevents damage and secures critical infrastructure
- Cyemptive Security Command, which centralizes and manages the entire security environment with a self-protected command center
- Cyemptive ZeroStrike Cloud Command, which provides secure cloud protection for cloud providers and protects their clients’ data from ransomware and even previously unknown Zero-Day attacks

Cyemptive’s military-grade pre-emptive cybersecurity solutions are available now. For more information, please visit the new website at www.cyemptive.com.

About Cyemptive Technologies

Headquartered in Seattle, Wash., with offices in North Carolina, the United Kingdom, France and India, Cyemptive has been on a mission to make large organizations cyber safe since 2014. Today, Cyemptive’s award-winning software, services and support are used by businesses and government entities worldwide. It is the winner of the Department of Homeland Security’s Border Security Technology Consortium (BSTC) competition for most innovative border security-related solution in the market, as well as 10 ‘ASTORS’ Homeland Security Awards from American Security Today at the 2022 competition alone - more than any other company in the history of the awards. The company’s leadership team is comprised of executives from several of the world’s most powerful technology and security organizations, including the former CIO of Microsoft and the former Chief Computer Architect for the National Security Agency.
