

Environmental Management System (EMS)

We have established an EMS within the U.S. EPA definition: “a set of processes and practices that enable an organization to reduce its environmental impact and increase its operating efficiency.” The main focus of our EMS is reducing the GHG emissions associated with the use of the homes we build over

their multidecade life cycle. Our EMS provides a framework for planning, implementing, measuring, evaluating and refining these efforts over time. The flow chart below demonstrates this framework and the rigorous validation we bring to the process.
