## CAMS Receives Battery Management Innovation Award

4/11/2024

HOUSTON--(BUSINESS WIRE)-- Consolidated Asset Management Services (**CAMS**), a fully integrated service provider for owners of energy infrastructure assets, announced today that it has been honored with the Battery Management Innovation Award from **CleanTech Breakthrough Awards**. This prestigious award is the result of CAMS' commitment to forward-looking practices in the energy and clean technology sectors.

A key differentiator in winning the award is CAMS' data-driven approach to battery energy storage system (BESS) maintenance. By integrating operations and maintenance (O&M), remote monitoring and operations, and data analytics, CAMS creates a synergistic solution that enhances operational effectiveness and efficiency. This integrated approach goes beyond mere aggregation and provides clients with a comprehensive and tailored solution to their renewable energy needs.

"This award is a testament to CAMS' leadership in the industry," said CEO and founder of CAMS, **Joseph W. Sutton**. "We have strategically positioned ourselves in the transition towards cleaner and more sustainable energy solutions through CAMS Energy Transition Services (CAMS ETS), with a focus on renewables, including BESS services."

As a winner, CAMS is part of an impressive list of top companies and startups in the clean technology industry around the world including Eavor, General Electric, Hydrostor, KBC, Lunar Energy, Omnidian, Palmetto, Scale Microgrids, Sunrun and more.

The CleanTech Breakthrough Awards acknowledge and celebrate the companies, products, and individuals who are driving sustainability and environmental consciousness around the globe. They are highly coveted with over 1,250 nominations for the inaugural award program. The awards are designed to honor and recognize the "breakthrough"

achievements and innovations in the international clean technology industry.

CAMS' diverse renewable portfolio encompasses O&M services for BESS, wind and solar projects across the U.S. With over 700 megawatts of solar assets, 4 gigawatts of wind under management and over 3 gigawatt hours of BESS assets, CAMS showcases extensive experience in the renewable energy sector.

## About CAMS

CAMS is a privately held company providing Operations and Maintenance (O&M), Asset Management, Environmental, Social, and Governance (ESG), and Optimization services for energy and infrastructure assets. We add value through superior management and operation of our clients' assets located throughout the U.S. and internationally. To this end, we empower our employees to pursue creative and sustainable business practices in the field and at our corporate office that contribute to operational excellence, financial performance, a safe workplace, and a better community and environment.
