

Juware Announces Launch of WebEOC Nexus to Advance Critical Workflows at IAEM

11/7/2023

ATLANTA--(BUSINESS WIRE)-- **Juware®**, the leader in situational awareness and critical incident preparedness and response technology, today announced the launch of WebEOC Nexus™, the next generation of its industry-leading **WebEOC®** platform. WebEOC Nexus builds on the same flexibility and reliability that have made WebEOC the gold standard in emergency management and operational resilience for more than two decades with a refined user interface, improved low-code/no-code functionality for developing custom workflows and dashboards, and powerful collaboration features to enable data sharing.

“The name ‘WebEOC Nexus’ reflects the growing importance of emergency preparedness and response professionals in both government and enterprise,” said Rajib Roy, President and Chief Executive Officer at Juware. “Our user community is vital to solving challenges that range from modernizing digital government to protecting vital infrastructure and responding to climate events. They are at the center of change and transformation, and ‘Nexus’ recognizes and honors their contribution to resilience globally.”

“WebEOC Nexus is a major milestone, and we are thrilled to unveil it at the International Association of Emergency Managers (IAEM) conference this year,” said Jeff Telford, Juware’s Chief Product Officer. “Built with the latest user experience principles in mind, WebEOC Nexus ensures that our clients will be able to use the solution not just to respond to emergencies but also for daily operations and critical workflows.”

Key features of WebEOC Nexus include:

1. Enhanced user experience, simplified navigation, and easy-to-use quick actions.
2. Customizable homepages that can be pre-set for various Incident Command System (ICS) positions or user roles.

3. Powerful maps with additional visualization layers and richer geospatial insights.
4. Frictionless coordination with other agencies and organizations through **JX Collaborate™**.

Since the release of WebEOC 9 in 2019, Juvare has continued to strengthen its information security posture. “WebEOC Nexus is founded on a world-class information security infrastructure,” said Bryan Kaplan, Chief Information & Information Security Officer at Juvare. “In addition to being hosted in a SOC 2-compliant environment, we have successfully completed the requirements to achieve the prestigious ISO 27001, ISO 27017, ISO 27018, ISO 27701, and ISO 22301 certifications.”

“We are confident that our clients will look like rockstars when they upgrade to WebEOC Nexus and show off all the new features and enhancements to their colleagues and stakeholders,” said Akshay Birla, Juvare’s Chief Client Officer. “Everyone on our team is excited and ready to be working with them as they undertake this transformation.”
