Robot Morning Acquires Enterprise Solutions Implementation Specialists

10/10/2023

Acquisition will Allow Robot Morning to Scale and Continue to Innovate Across Aerospace Supply Chain

CINCINNATI--(BUSINESS WIRE)-- **Robot Morning**, a leader in aerospace supply chain software and automation solutions, announced today that it has acquired **Enterprise Solutions Implementation Specialists (ESIS)**. Terms of the private transaction were not disclosed.

Founded in 1992, ESIS provides cloud-based Electronic Data Interchange (EDI) and business-to-business (B2B) integration services that empower businesses to streamline their supply chain processes, safely and securely exchange information with partners and achieve operational efficiencies. Its supply chain management system is used by over 20,000 suppliers across multiple manufacturing industries, including aerospace.

"As the aerospace supply chains rebound from the pandemic and continue to accelerate, the ability to efficiently and safely maintain the information flow and digital threads that connect suppliers and their customers is becoming increasingly complex and mission-critical," said Emmeram Morning, President & Founder of Robot Morning. "By joining forces with ESIS, we can increase our scale and help companies improve communication with partners, safely and securely."

Founded in 2008, Robot Morning's industrial network, AXON, authenticates, secures, and normalizes the data moving between businesses, ensuring its security and availability at all times, and minimizing interruptions. By analyzing the data exchanged between customers and multi-tier suppliers across the aerospace supply chain, Robot Morning also provides customers and suppliers with analytics and insights that can help streamline processes and maximize efficiency.

"We're very excited to be joining the Robot Morning team," added Derek Baggerly, Chief Executive Officer at ESIS. "With the aerospace supply chain growing in complexity, and given the ever-increasing focus on safety and quality in the production of components, there is massive demand for technology that can help speed up manufacturing, while driving cost savings. Bringing our technology and resources together gives ESIS and Robot Morning the scale to serve more customers and a greater capacity to innovate."

In 2019, Robot Morning received a minority investment from Belcan LLC, a portfolio company of AE Industrial Partners, LP and a global supplier of engineering, supply chain, technical recruiting, and IT services.

About Robot Morning:

Founded in 2008, Robot Morning focuses on creating tools that empower suppliers in their conversations with customers across the aerospace supply chain. Founder Emmeram Morning has been in aerospace since 1998, when he took over IT and internal software responsibilities at a then-small bracket manufacturer. Robot Morning's mission is to improve how the entire supply chain communicates with itself, both through the automatic movement of data and the creation of software that provides action-driving insights.

About ESIS:

Founded in 1992, ESIS boasts over 25,000 e-commerce partners worldwide. It provides supply chain data services tailored to the unique needs of its clients. ESIS' Harmony Order Management (HOM) portal, the company's flagship supply chain management system, is used by more than 20,000 suppliers across multiple manufacturing sectors.
