Alarm.com Introduces Premium Indoor Camera With Built-In Privacy Shutter and Color Night Vision

2026-06-18

Premium 4MP indoor camera delivers smarter security, stronger privacy controls, and improved low-light visibility at a lower price

TYSONS, Va.--(BUSINESS WIRE)-- Alarm.com (Nasdaq: ALRM), the leading platform for intelligently connected properties, announced the ADC-V530, a premium indoor Wi-Fi camera designed to deliver strong security and built-in privacy. The V530 delivers 4MP HDR video, color night vision with an integrated spotlight, and a physical privacy shutter, all at a lower cost than the previous generation indoor camera.

Alarm.com announces the release of the 4MP Indoor Wi-Fi Camera with Integrated Spotlight (ADC-V530).

The ADC-V530 is Alarm.com's first indoor camera with a built-in privacy shutter that physically

blocks the lens when closed. Customers can control the shutter manually or automate it based on schedules and rules in the Alarm.com app. This makes it easy to keep an eye on spaces while they are away and confidently shut off the camera view when they are at home. The camera also supports the full suite of proactive deterrence and monitoring services available on the Alarm.com platform.

"With the V530, we set out to remove the biggest objection to indoor cameras," said Dan Kerzner, President of Platforms Business at Alarm.com. "Customers get sharper video, better visibility at night, and a physical privacy control they can see and trust, all included with the Alarm.com platform."

Sharper Video and Better Visibility

The ADC-V530 captures clear 4MP HDR video with a 110-degree field of view, providing improved detail for live and

recorded footage. An integrated spotlight enables color video at night, helping customers see what's happening clearly after dark while also supporting deterrence features such as AI Deterrence, Perimeter Guard®, and manually triggered warning sounds.

Smarter Alerts and Flexible Recording

The V530 includes updated Video Analytics that detect people, animals, vehicles, and business activity, delivering more relevant alerts and reducing unnecessary recordings. Customers can customize recording rules through a redesigned interface that makes it easier to fine-tune notifications and deterrence responses.

Eligible domestic U.S. customers on Premium Video or Commercial Video Plus packages can also access AI Video Event search, allowing them to quickly find specific recorded events using natural language search.*

For continuous coverage, the ADC-V530 supports encrypted local recording using onboard microSD storage and integrates with Alarm.com Stream Video Recorders for 24/7 recording.

Designed for Homes and Small Businesses

The ADC-V530 is well suited for residential spaces as well as small and medium-sized businesses. Business users can access Business Activity Analytics to gain insights into traffic patterns and customer behavior, while after hours the built-in spotlight and professional video monitoring options help protect indoor spaces.

The Alarm.com 4MP Indoor Wi-Fi Camera with Integrated Spotlight (ADC-V530) is available now through Alarm.com service providers in all supported markets. The camera works with Alarm.com's residential and commercial video service packages, with feature availability based on the selected plan.

For more information about the ADC-V530 and Alarm.com's complete video security ecosystem, visit www.alarm.com.

*AI Video Event Search is not available in Illinois due to local laws.
