Alarm.com Showcases Unified Platform Growth and AI-Powered Innovation at ISC West 2026

2026-03-18

AI-driven intelligence, unified monitoring, and next-generation video support scalable protection for homes and businesses

TYSONS, Va.--(BUSINESS WIRE)-- Alarm.com (Nasdaq: ALRM), the leading platform for intelligently connected properties, today announced it will showcase new AI-powered platform advancements and product innovations at ISC West 2026. Following a milestone year surpassing \$1 billion in annual revenue, Alarm.com continues to scale its unified platform to meet accelerating global demand for smarter, more connected protection across residential and commercial environments.

Alarm.com brings security, video, access control, automation, energy management, and professional monitoring into a single cloud-based platform designed to scale from individual properties to multi-site deployments. These innovations help service provider partners deliver proactive protection, simplify operations, and build long-term recurring revenue.

"Alarm.com is operating at global scale, and our platform innovation reflects that," said Dan Kerzner, President of Platforms Business at Alarm.com. "We're focused on practical, privacy-first AI, a broad ecosystem of third-partners, and purpose-built hardware that help partners grow while delivering meaningful protection for customers."

AI-Powered Protection Designed with Privacy in Mind

Alarm.com continues to expand AI-driven capabilities across its platform with new features including AI Video Event Search, AI Access Assist, Familiar Face Analytics, and ongoing enhancements to AI Deterrence (AID). These innovations are designed to improve awareness and efficiency while ensuring customers remain in control of how

AI features are enabled and used.

AI Video Event Search allows customers to quickly locate relevant activity in their saved video clips using natural-language queries, like “package delivery yesterday” or “kids with bicycles today.” This new feature is available on Premium Video and Commercial Video Plus plans. Only users who already have permission to view securely retained video can run AI searches, and customers can exclude specific cameras from search results at any time. The feature also works with Alarm.com’s Familiar Face and Familiar Vehicle analytics, helping to filter expected activity from unexpected events in video results.

At ISC West, Alarm.com will also preview AI Access Assist and demonstrate the latest capabilities of AID. AI Access Assist simplifies access control management by allowing administrators to manage users, credentials, and schedules using natural-language commands. AID delivers AI-generated verbal warnings based on activity captured on camera and has been further enhanced with adaptive messaging and progressive responses. Adaptive verbal warnings can now reference real-world details such as clothing color or behavior, while Progressive Responses escalate messaging when loitering persists—strengthening AID’s overall effectiveness.

Next-Generation Video Designed to Scale

Alarm.com will also highlight an expanded portfolio of next-generation cameras, including the Volt Series™, Foundation Series, Core Series, and Prism Series™, designed to support faster installs, broader coverage, and advanced video services. Video is a core component of the Alarm.com platform, with millions of active video cameras and video devices now deployed across its commercial property base as adoption continues to grow.

Volt Series™ battery-powered cameras and doorbells enable wire-free indoor and outdoor installations, helping partners expand coverage in locations where wiring is not practical. When paired with Alarm.com’s optional solar panel accessory, the ADC-V731B camera can operate for extended periods with minimal maintenance. The Foundation Series indoor camera introduces an accessible price point that drives higher attach rates and multi-camera adoption.

The refreshed Core Series adds enhanced speakers, integrated spotlights, Video Analytics 2.0, and Bluetooth® enrollment, creating a clear upgrade path to AID and Remote Video Monitoring (RVM). For commercial environments, Prism Series™ PoE cameras also enable AID and RVM while delivering 8MP resolution with exceptional low-light color performance using VividNight™ technology, providing premium clarity and reliability.

Unified Professional Video Monitoring with CHeKT

Alarm.com will also highlight its expanded integration with CHeKT, a best-in-class remote video monitoring platform

trusted by monitoring centers to deliver verified, real-time video response. By bringing Alarm.com video and alarm events into CHEKT's monitoring portal, the integration streamlines operator workflows, helps reduce false alarms, and improves response times. CHEKT supports an open framework and will also work with video solutions from many video camera manufacturers.

At ISC West, Alarm.com will highlight its CHEKT integration while continuing to build on its broader video monitoring strategy with CHEKT's Video Control Panel and its long-standing partnership with OpenEye.

Expanded Commercial, Energy, and Safety Solutions

Alarm.com continues to extend its platform with new offerings that support total site protection across indoor, outdoor, and multi-location environments, including the Fire Communicator and Mobile Security Trailers. These solutions bring security, safety, and monitoring together on a single platform, helping businesses manage both permanent and temporary sites more efficiently.

The Fire Communicator modernizes commercial fire monitoring with real-time alerts and reporting through the Alarm.com platform. The ADC-FC100 is UL Listed, CSFM Listed, and NFPA 72 compliant to meet applicable local code requirements. Mobile Security Trailers extend the platform to construction sites, events, and other temporary locations, combining video surveillance and professional monitoring in a rapidly deployable solution. Available in two form factors, Mast and Mast Mini, the trailers offer flexibility to meet different site needs and budgets, while a turnkey leasing model reduces upfront costs and supports capital-efficient growth. Partners can also cobrand the trailers to increase visibility and support lead generation.

Beyond security, Alarm.com is expanding connected home and personal safety capabilities with offerings such as the ADC-T25 Smart Thermostat, which delivers intelligent HVAC control with fast installation and support for energy reporting, Demand Response, and Pro HVAC Monitoring. Outside the home, the enhanced in-app Safety Button provides 24/7 mobile personal safety. The new Check-In feature allows customers to schedule safety confirmations, automatically escalating to a trained operator and notifying the emergency contact if no response is received.
