

Kirazlı Fact Sheet – September 2019

Alamos Gold (“Alamos”) is a Canadian-based intermediate gold producer with four operating mines in Canada and Mexico, and development projects in Turkey, Canada, Mexico and the United States. Environmental care is a core value of Alamos Gold with this applied in the same manner across operations in every jurisdiction. Alamos has been operating mines in Mexico and Canada since 2005 in accordance with the highest environmental standards. These high-level environmental standards have been applied to the design, construction, and ultimate operation and reclamation of the Kirazlı Gold and Silver Project (“Kirazlı Project”).

ALAMOS GOLD INC.

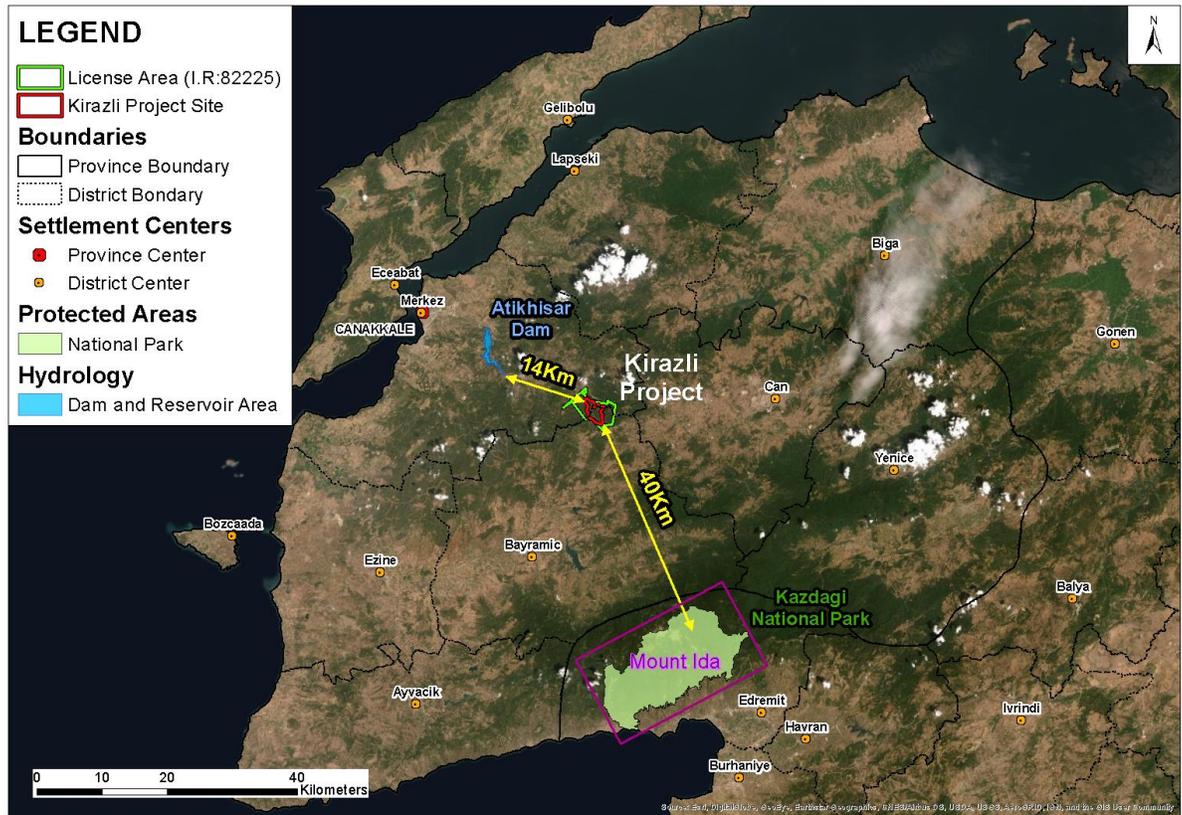

Incorrect information regarding the Kirazlı Project has recently circulated on social and other media. The Company has prepared the following summary of key facts to correct this misinformation.

ALLEGATIONS FACTS

The Kirazlı Project is located in the Kaz Dağları National Park

The Kirazlı Project is not located in the Kaz Mountains nor is it located in a national park

- The project is located 40 km away from the Kaz Dağları National Park and 30 km from Çanakkale city center as detailed in the map below

The Kirazlı Project will have a negative impact on Atikhisar Reservoir

It is impossible for the Kirazlı Project to have any negative impact on the Atikhisar Reservoir

- The project is **located 14 km away** from the Atikhisar reservoir
- The processing facilities for the project are **located outside** the Atikhisar reservoir watershed
- The project **will not source water** from the Atikhisar reservoir
- Alamos is nearing completion of an independent water reservoir to provide water for the operation and clean drinking water for nearby communities

Tree clearing was unauthorized

Forestry Permits were granted to Alamos, allowing for 354 hectares to be cleared

- Approximately 20,000m³ of trees were harvested from the Kirazlı permitted area
- This represents less than 2% of the total volume harvested by the Çanakkale Forestry Regional Directorate and 0.1% of the total volume harvested by the Forestry General Directorate in Turkey in 2018
- Alamos has committed to reclaiming and reforesting all 354 hectares
- Alamos has already planted 14,000 trees in the region

Water and soil will be contaminated with cyanide

Alamos uses cyanide in a safe manner at all of its operations

- Cyanide or any derivative of cyanide is never used in gold exploration or mining
- Cyanide is only used in the processing stage to separate gold from the extracted ore
- Processing is carried out within a closed circuit, in dedicated, protected and impermeable containment facilities. No cyanide is allowed out of the circuit and into the surrounding environment
- Cyanide is used safely throughout Turkey across several other industries including in the manufacturing of textiles, paper and plastics

Alamos History in Turkey

Alamos has been working in Turkey since 2010. Since then, we have been engaged in consultation with various government ministries and local communities, while working on a multi-year environmental review and community consultation process. Alamos was granted approval of the Environmental Impact Assessment, Forestry Permit, GSM and Operating Permit from the relevant regulatory authorities. These permits were granted after passing a rigorous environmental review process, and securing the support from local communities.

Economic Benefits

Alamos' projects in Turkey are expected to create over 2,000 jobs in Turkey, between direct and indirect employment. Additionally, these Turkish projects are expected to generate substantial economic benefit to the Turkish economy. Over the course of fifteen years, we anticipate production of over 1.8 million ounces of gold in Turkey, with most of the economic benefit remaining in Turkey. In addition to over US\$1 billion in capital and operating costs, over US\$500 million in tax, royalty and other revenues will accrue to the Turkish state.
