Alamos Gold Announces Appointment of Mr. Kenneth Stowe to its Board of Directors

Toronto, Ontario - Alamos Gold Inc. (TSX: AGI) ("Alamos" or the "Company") is pleased to announce the appointment of Ken Stowe to the Board of the Directors of the Company. Mr. Stowe replaces Len Harris, who resigned from the Board of Directors in July 2011.

Mr. Stowe obtained a Bachelor of Science and Master of Science in Mining Engineering from Queen's University. Ken began his career with Noranda Inc. and spent 21 years in progressive operational, research and development, and corporate roles. In 1999, Ken was appointed President of Northgate Minerals and served as Chief Executive Officer from 2001 to 2011. Ken received the prestigious Canadian Mineral Processor of the Year Award in 2006, recognizing his superior accomplishments and contributions in the field of mineral processing.

Mr. Stowe has also held senior positions with mining, mine development, and mineral exploration companies. He is currently a director of Hudbay Minerals and the lead director of Klondex Minerals.

Commenting on Mr. Stowe's appointment, John A. McCluskey, Alamos' President and Chief Executive Officer, stated:

"On behalf of the Board of Directors and management, I would like to thank Ken for accepting this appointment to Alamos' board. Ken is an industry veteran. He brings invaluable leadership and a wealth of technical experience to Alamos, as the Company prepares for production growth at Mulatos next year and the development of our Turkish projects."

About Alamos

Alamos is an established Canadian-based gold producer that owns and operates the Mulatos Mine in Mexico, and has exploration and development activities in Mexico and Turkey. The Company employs nearly 500 people in Mexico and Turkey and is committed to the highest standards of environmental management, social responsibility, and health and safety for its employees and neighbouring communities. Alamos has over $200 million cash on hand, is debt-free, and unhedged to the price of gold. As of September 26, 2011, Alamos had 118,115,106 common shares outstanding (124,941,306 shares fully diluted), which are traded on the Toronto Stock Exchange under the symbol "AGI".

Cautionary Note

No stock exchange, securities commission or other regulatory authority has approved or disapproved the information contained herein. This News Release includes certain “forward-looking statements”. All statements other than statements of historical fact included in this release, including without limitation statements regarding forecast gold production, gold grades, recoveries, waste-to-ore ratios, total cash costs, potential mineralization and reserves, exploration results, and future plans and objectives of Alamos, are forward-looking statements that involve various risks and uncertainties. These forward-looking statements include, but are not limited to, statements with respect to mining and processing of mined ore, achieving projected recovery rates, anticipated production rates and mine life, operating efficiencies, costs and expenditures, changes in mineral resources and conversion of mineral resources to proven and probable reserves, and other information that is based on forecasts of future operational or financial results, estimates of amounts not yet determinable and assumptions of management.

Exploration results that include geophysics, sampling, and drill results on wide spacings may not be indicative of the occurrence of a mineral deposit. Such results do not provide assurance that further work will establish sufficient grade, continuity, metallurgical characteristics and economic potential to be classed as a category of mineral resource. A mineral resource which is classified as “inferred” or “indicated” has a great amount of uncertainty as to its existence and economic and legal feasibility. It cannot be assumed that any or part of an “indicated mineral resource” or “inferred mineral resource” will ever be upgraded to a higher category of resource. Investors are cautioned not to assume that all or any part of mineral deposits in these categories will ever be converted into proven and probable reserves.

Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as "expects" or "does not expect", "is expected", "anticipates" or "does not anticipate", "plans", "estimates" or "intends", or stating that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved) are not statements of historical fact and may be "forward-looking statements." Forward-looking statements are subject to a variety of risks and uncertainties which could cause actual events or results to differ from those reflected in the forward-looking statements.

There can be no assurance that forward-looking statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from Alamos’ expectations include, among others, risks related to international operations, the actual results of current exploration activities, conclusions of economic evaluations and changes in project parameters as plans continue to be refined as well as future prices of gold and silver, as well as those factors discussed in the section entitled “Risk Factors” in Alamos’ Annual Information Form. Although Alamos has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.
