DFIN Sponsors GovDATAx 2019 Summit to Advance Data Integrity and Transparency

10/17/2019

Leaders in the data community unite to discuss policies and develop strategies for making government data more accessible and useful

CHICAGO--(BUSINESS WIRE)-- **Donnelley Financial Solutions** (NYSE: DFIN), a leading global risk and compliance company, announced its partner sponsorship of the **GovDATAx 2019 Summit** on October 30, in Washington, D.C., where leaders will discuss how high-quality government data can become more accessible and useful.

GovDATAx is a unique opportunity to connect members across the data community, from traditional organizations to niche disciplines, and provide a forum for collaboration on strategies that can impact the way government data is shared and used responsibly. Ned Gannon, president, eBrevia, a DFIN company, will moderate a panel discussing these themes, titled, "Data for Innovation and the Future – Artificial Intelligence, Blockchain and Secure Data Sharing."

"I'm honored to be joined by leaders in data to discuss how innovative technologies are transforming the way we work today and for the future," said Ned Gannon, president, eBrevia. "Rarely do you get the chance to have so many leaders across industries – from the public sector, businesses, non-profits and academia – come together to share knowledge and ideas around the latest trends impacting the intersection of data policy and artificial intelligence."

The panel will explore how today's data policies can support the use of artificial intelligence and further the technological applications of data analytics. Moreover, the discussion will take a closer look at what the future of the policy environment holds.

"We are thrilled to continue our partnership with DFIN for GovDATAx 2019," said Nick Hart, chief executive officer, Data Coalition. "Our shared priorities, like the proposed Financial Transparency Act, will enable better data

management to support meaningfully using financial regulatory data in government and the private sector. The summit is an opportunity for leaders in regulatory and financial technology, data management and practice, and evidence-based policymaking to focus on common goals for producing government data that can be responsibly used to improve society.”
