

Church of England Pension Board Disclosure Request, April 2019

First Quantum Minerals Ltd Tailings Storage Facilities

First Quantum Minerals Ltd (First Quantum) operates 10 active tailings storage facilities (TSFs) and maintains 13 closed TSFs, across eight countries. Currently, 1 of the active TSFs is on care and maintenance.

A description of our TSF management system and TSF risk management is included in the note, 'Safety and Security of Our Tailings Storage Facilities' published on the FQM website www.first-quantum.com.

The design, construction, management, operational control and monitoring of our TSFs is a priority for the First Quantum board and our management teams. The recent tailings disasters in Canada and Brazil have only served to refocus our efforts in this very important area of operations.

Attached are completed mine tailings disclosure questionnaires for each of our active and closed TSFs.

First Quantum has exposure to other tailings storage facilities through its 17% shareholding in Mopani Copper Mines Limited (MCM), operators of the Mufulira and Nkana copper mines in Zambia. The Company has no operational control with regard to MCM's TSFs (active or closed).
